The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

Services, Integrated Approach to Obstetrics and Gynaecology is a textbook for medical undergraduates and residents. This textbook is unique in that it takes an integrated approach in discussing the six phases in the life of a woman, namely, the early years of growing up, the reproductive years, pre-conception, early pregnancy, pregnancy care, and functional ageing in a mature woman. Emphasis has been focused on information that constitutes essential 'core knowledge' in the blueprint of the medical undergraduate curriculum. The format is easy to follow: background introduction to history; examinations and investigations to establish a diagnosis and then treatment and management. However, this may have to be modified as deemed appropriate for a particular topic. Where appropriate, knowledge that is 'good to know' has been incorporated beyond the essential 'core knowledge'.

Bates' Pocket Guide to Physical Examination and History Taking Springer

The new edition of this practical manual has been fully revised to provide trainees in obstetrics and gynaecology with the latest information and guidelines to help

them prepare for examinations. Presented in question and answer format, the book is divided into five sections – Obstetrics, Surgical Requisites, Problem-based Management, Family Welfare. The final section covers miscellaneous topics such as definitions, anaesthetic techniques, fluids and electrolytes, preparation for MRCOG exams, classifications, and FIGO staging. The second edition features many new topics including foetal aneuploidy screening, obstetric drills, maternal resuscitation, and recent FIGO staging for gynaecologic cancers. The text is highly illustrated with clinical photographs, diagrams and tables, and includes questions often asked in Viva Voce examinations. Key points Fully revised, new edition providing trainees with latest developments in obstetrics and gynaecology Presented in question and answer format Includes questions frequently asked in Viva Voce examinations Assists in preparation for MRCOG exams
