 An essential reference for everybody concerned with the calculation of costs of mechanical and electrical works. Cost Engineer The construction sector is improving. Will skills shortages derail the upturn? Spon's Mechanical and Electrical Services Price Book 2016  
*Spon's Mechanical and Electrical Services Price* CRC Press  
 This important new book, the first of its kind in the fire safety field, discusses the economic problems faced by decision-makers in the areas of fire safety and fire precautions. The author considers the theoretical aspects of cost-benefit analysis and other relevant economic

problems with practical applications to fire protection systems. Clear examples are included to illustrate these techniques in action. The work covers: \* the performance and effectiveness of passive fire protection measures such as structural fire resistance and means of escape facilities, and active systems such as sprinklers and detectors \* the importance of educating for better understanding and implementation of fire prevention through publicity campaigns and fire brigade operations \* cost-benefit analysis of fire protection measures and their combinations, taking into account trade-offs between these measures. The book is essential reading for consultants and academics in construction management, economics and fire safety, as well as for insurance

and risk management professionals.

The Dictionary of Construction Terms offers clear and concise explanations of the most commonly encountered legal and technical terms, phrases and abbreviations used throughout the construction industry. It will save valuable time when searching for an authoritative explanation of a frequently used term and will become a practical reference for construction lawyers, practitioners and students, as well as those in related industries including planning, property and insurance. Why

you should buy this book: There is no other all-inclusive collection of legal and technical terms available at present Convenient source of information for lawyers, practitioners and students Includes a list of common technical acronyms (ie. DPC, DPM, FFL) Lists acronyms of common institutions such as the ICE, JCT and ACE Examples of definitions: Modular construction A modern construction method whereby the building is constructed using prefabricated or pre-assembled building sections or modules. The three-dimensional building sections are typically fabricated and assembled in an enclosed factory environment and then delivered to site, ready for installation. Modular construction is aimed at minimising construction time by

standardising design components, providing consistent quality and allowing site preparation and building activities to commence concurrently with the construction of the factory-made modules. Snagging The process of formally inspecting the construction works to identify any incomplete works or defects in completed works. A snagging list (or 'punch list') is a schedule of defects resulting from this inspection. These items typically need to be rectified prior to the issuing of a completion certificate or handing-over of the works although in some cases a

completion certificate will be issued with a snagging list attached.
