The authors wrote this text in response to the absence in the market of a text that would meet the needs of finance majors, but would still be accessible to all students. In many cases, as many as 80% of undergraduate corporate finance courses are filled with non-finance majors who are either intimidated by this course or who don't understand why they have to take the class (or both!). This text addresses the challenges all professors face: keeping students at varying degrees of ability and interest motivated and invested in the material.

Brealey, Principles of Corporate Finance 13e describes the theory and practice of corporate finance. We hardly need to explain why financial managers must master the practical aspects of their job, but we should spell out why down-to-earth managers need to bother with theory. Throughout this edition, the authors demonstrate how managers use financial theory to solve practical problems. They also explore what financial managers should do to increase company value. Some of the biggest changes in this edition were prompted by the tax changes enacted in the U.S. Tax Cuts and Jobs Act passed in December 2017.

Essentials of Accounting for Governmental and Not-for-Profit Organizations Pearson College Division

Copley's Essentials of Accounting for Governmental and Not-for-Profit Organizations, 13e is best suited for those professors whose objective is to provide more concise coverage than what is available in larger texts. The main focus of this text is on the preparation of external financial statements which is a challenge for governmental reporting. The approach in this edition is similar to that used in practice. Specifically, day to day events are recorded at the fund level using the basis of accounting for fund financial statements. Governmental activities are recorded using the modified accrual basis. The fund-basis statements are then

used as input in the preparation of government-wide statements. The preparation of government-wide statements is presented in an Excel worksheet. NEW for the 13th edition is McGraw-Hill Connect, a digital teaching and learning environment that saves students and instructors time while improving performance over a variety of critical outcomes.

Sparked with wit and humor, this clever and insightful book provides clear evidence that the stock market is inefficient. In the author's view, models based on rational economic behavior cannot explain important aspects of market behavior. The book tackles important issues in today's financial market in a highly conversational and entertaining manner that will appeal to most readers. Chapter topics include: estimating expected return with the theories of modern finance, estimating portfolio risk and expected return with ad hoc factor models, payoffs to the five families, predicting future stock returns with the expected-return factor model, super stocks and stupid stocks, the international results, the topography of the stock market, the positive payoffs to cheapness and profitability, the negative payoff to risk, and the forces behind the technical payoffs to price-history. For anyone who wants to learn more about today's financial markets.
