Table analytique et raisonnée des matières contenues dans les XXXIII volumes in-folio du Dictionnaire des sciences, des arts et des métiers, et dans son supplément Cambridge University Press
In this volume, Aurélien Mokoko Gampiot, a sociologist and son of a Kimbanguist pastor, provides a fresh and insightful perspective

on African Kimbanguism and its traditions. The largest of the African-initiated churches, Kimbanguism claims seventeen million followers worldwide. Like other such churches, it originated out of black African resistance to colonization in the early twentieth century and advocates reconstructing blackness by appropriating the parameters of Christian identity. Mokoko Gampiot provides a contextual history of the religion's origins and development, compares Kimbanguism with other African-initiated churches and with earlier movements of political and spiritual liberation, and

explores the implicit and explicit racial dynamics of Christian identity that inform church leaders and lay practitioners. He explains how Kimbanguists understand their own blackness as both a curse and a mission and how that underlying belief continuously spurs them to reinterpret the Bible through their own prisms. Drawing from an unprecedented investigation into Kimbanguism's massive body of oral traditions—recorded sermons, participant observations of church services and healing sessions, and translations of hymns—and informed throughout by Mokoko Gampiot's intimate knowledge of the customs and language of Kimbanguism, this is an unparalleled theological and sociological analysis of a unique African Christian movement.

This book explains with a minimum of jargon how diseases start, what that main symptoms are and how they may affect us. It is intended as a concise guide for those working in alternative medicine and also for those without a medical background who want a clearer understanding of the ways in which common illnesses develop and the terms used to describe them.

First published in 1202, Fibonacci's Liber Abaci was one of the most important books on mathematics in the Middle Ages, introducing Arabic numerals and methods throughout Europe. This is the first translation into a modern European language, of interest not only to historians of science but also to all mathematicians and mathematics teachers interested in the origins of their methods.

This book explores the problematic relationship between education, social justice and the State, against the background of comparative education research. The book critiques the status quo of stratified school systems, and the unequal distribution of cultural capital and value added schooling. The authors address one of today's most pressing questions: Are social, economic and cultural divisions between the nations, between school sectors, between schools and between students growing or declining?

Mathematics as a Service Subject Editions Bréal

Lobachevsky wrote Pangeometry in 1855, the year before his death. This memoir is a resume of his work on non-Euclidean geometry and its applications and can be considered his clearest account on the subject. It is also the conclusion of his life's work and the last attempt he made to acquire recognition. The treatise

contains basic ideas of hyperbolic geometry, including the trigonometric formulae, the techniques of computation of arc length, of area and of volume, with concrete examples. It also deals with the applications of hyperbolic geometry to the computation of new definite integrals. The techniques are different from those found in most modern books on hyperbolic geometry since they do not use models. Besides its historical importance, Lobachevsky's Pangeometry is a beautiful work, written in a simple and condensed style. The material that it contains is still very alive, and reading this book will be most useful for researchers and for students in geometry and in the history of science. It can be used as a textbook, as a sourcebook, and as a repository of inspiration. The present edition provides the first complete English translation of Pangeometry available in print. It contains facsimiles of both the Russian and the French original versions. The translation is accompanied by notes, followed by a biography of Lobachevsky and an extensive commentary.

International interventions in the aftermath of mass violence tend to focus on justice and reconciliation processes, elections and institution-building. The frame of reference tends to be at the state level with insufficient attention paid to the transformations of belief systems and codes of conduct. This book seeks to bridge this divide by offering a trans-disciplinary analysis of the impact of mass crime on the rebuilding of social and political relations. Drawing on historical and more recent cases (including examples from Bosnia-Herzegovina, Burundi, Cambodia, Indonesia, Peru, and Rwanda) the authors examine the impact of mass crimes on

individuals, society at large, and the organizations involved in providing assistance in the post-conflict phase.

Freud prophesied in 1914 that the 'final decisive battle' for psychoanalysis would take place 'where the greatest resistance [had] been displayed.' Wary of America's too easy acceptance, he suspected a dilution and distortion of his most vital and therefore most unacceptable doctrines. Among Western countries, France may well be the one that resisted Freud the longest. Yet quite suddenly, in the late 1960s, France was seized by an 'infatuation with Freudianism.' By the end of that decade, France had more than a psychoanalytic movement: it had a widespread and deeply rooted psychoanalytic culture. At the heart of this development was Jacques Lacan's reconstruction of Freudian theory, a 'reinvention' of psychoanalysis that resonated with French culture in the aftermath of the uprisings of 1968. While, in America, psychoanalysis has become increasingly identified with an essentially conservative medical establishment, the French rediscovery of Freud, in a dramatic enactment of Freud's prophesy, became associated with the most radical elements of French philosophical and political life. The story of Lacan, and why his work so profoundly influenced the French psyche, is told clearly and unerringly by Sherry Turkle in this groundbreaking work. Already acclaimed as 'an absolutely indispensable contribution to the history of psychoanalysis,' this second edition of PSYCHOANALYTIC POLITICS contains two illuminating new additions. The preface explicates Lacan's impact on the French by laying out a theory of the conditions for the

dissemination and acceptance of a set of philosophical positions by a culture. The final chapter, *Dynasty 1991*, provides a fascinating portrayal of the last years of Lacan's life, the intrigue and power struggles that resulted in the break-up of the Freudian School he founded, and the events which unfolded in the years following his death in 1981. The heart of the book is Sherry Turkle's first-hand account of the psychoanalytic culture that developed in France--as a politicized, Gallicized, and poeticized Freudianism, deeply marked by the work of Jacques Lacan. The clearest introduction in English to Lacan's teaching, the work explores how cultures appropriate theories of mind. It is an intimate sociology of how ideas come to connect with individuals. Providing an ``inner history' of the sciences of the mind, this book will be invaluable reading for anyone with an interest in psychoanalysis, history, social theory, communications, film theory, and contemporary literary criticism.

Malala Yousafzai stood up to the Taliban and fought for the right for all girls to receive an education. When she was just fifteen-years old, the Taliban attempted to kill Malala, but even this did not stop her activism. At age eighteen Malala became the youngest person to be awarded the Nobel Peace Prize for her work to ensure the education of all children around the world. Malala's courage and conviction will inspire young readers in this

beautifully illustrated biography. Batchelder Award Honor Book "A realistic and inspiring look at Malala Yousafzai's childhood in Taliban-controlled Pakistan and her struggle to ensure education for girls" — Kirkus Reviews "Surpasses [similar books] in contextual scope" — School Library Journal "A solid introduction to the Nobel Peace Prize winner"— Publisher's Weekly

Can the living help the dead ... and at what cost? When Alex Fletcher finds a painting of a drowned girl, she's unnerved. When the girl in the painting opens her eyes, she is terrified. And when the girl appears to her as an apparition and begs her for help, Alex can't refuse. But as she digs further into Grace's past, she is embroiled in supernatural forces she cannot control, and a timeslip back to 1912 brings her face to face with the man who killed Grace and the demonic spirit of his long-dead mother. With such nightmarish forces stacked against her, Alex's options are few. Somehow she must save Grace, but to do so, she must pay an unimaginable price.

Journals and Debating Speeches Springer Science & Business Media

This volume offers a selection of papers presented during the 14th International Conference on the History of the Language Sciences (ICHoLS XIV, Paris, 2017). Part I brings together studies dealing with descriptive concepts. First examined is the notion of "accidens" in Latin grammar and its Greek counterparts. Other

papers address questions with a strong echo in today's linguistics: localism and its revival in recent semantics and syntax, the origin of the term "polysemy" and its adoption through Bréal, and the difficulties attending the description of prefabs, idioms and other "fixed expressions". This first part also includes studies dealing with representations of linguistic phenomena, whether these concern the treatment of local varieties (so-called patois) in French research, or the import and epistemological function of spatial representations in descriptions of linguistic time. Or again, now taking the word "representation" literally, the visual display of grammatical relations, in the form of the first syntactic diagrams. Part II presents case studies which involve wider concerns, of a social nature: the "from below" approach to the history of Chinese Pidgin English underlines the social roles of speakers and the diversity of speech situations, while the scrutiny of Lhomond's Latin and French textbooks demonstrates the interplay of pedagogical practice, cross-linguistic comparison and descriptive innovation. An overview of early descriptions of Central Australian languages reveals a whole spectrum of humanist to positivist and antihumanist stances during the colonial age. An overarching framework is also at play in the anthropological perspective championed by Meillet, whose socially and culturally oriented semantics is shown to live on in Benveniste. The volume ends with a paper on Trần Đức Thảo, whose work is an original synthesis between phenomenology and Marxist semiology, wielded against the "idealistic" doctrine of Saussure.

This book introduces the student to numerous modern applications of mathematics in technology. The authors write with clarity and present the mathematics in a clear and straightforward way making it an interesting and easy book to read. Numerous exercises at the end of every section provide practice and reinforce the material in the chapter. An engaging quality of this book is that the authors also present the mathematical material in a historical context and not just the practical one. Mathematics and Technology is intended for undergraduate students in mathematics, instructors and high school teachers. Additionally, its lack of calculus centrality as well as a clear indication of the more difficult topics and relatively advanced references make it suitable for any curious individual with a decent command of high school math.
