This fully updated new edition is a comprehensive guide to interventional radiology (IR) for medical students, residents, early career attendings, nurse practitioners and physician assistants. The IR Playbook includes procedures, new and updated data, and new images, to stay on the cutting edge of IR. As a specialty, IR is constantly changing and evolving to apply newer technologies and techniques to a breadth of disease pathologies. This book addresses the growing need for a reference for trainees and early career professionals to gain a solid foundation. Let this book serve as your only resource from the first day you find out about IR to the day you take your certifying exam. One and done. The textbook is divided into two main sections, with many images and key point boxes throughout that offer high-yield pearls along with the specific How To's necessary for practice. The first section is designed to give readers an introduction to IR, including radiation safety, commonly used devices, patient care, and anatomy. The second portion is divided by procedure. These chapters cover pathophysiology, indications for treatment, as well as alternative treatments before delving into interventional therapy. This new edition has been fully updated throughout including several brand-new procedures and divided chapters to allow a more in depth look at several disease pathologies. IR Playbook gives medical students, residents, and trainees a full perspective of interventional radiology.

Indications for central venous cannulation in critically ill patients have increased dramatically, but central venous access has the drawbacks of morbidity and a scarcity of experienced operators. Ultrasound-guided peripheral venous access offers a solution, in that it reduces morbidity and can be performed by a dedicated nursing team. The aim of this book is to teach the fundamentals of this emerging technique. Advice is provided on choice of materials; maneuvers for positioning of peripherally inserted central venous catheters (PICCs), techniques for evaluation of PICC tip placement; prevention, diagnosis, and management of complications; and organization of a dedicated team within a hospital or a supportive care program. Legal and economic issues are also

considered. The book will be of interest to a wide range of professionals, including nutritionists, oncologists, anesthesiologists, surgeons, registered nurses, nurse practitioners, physicians, physician assistants, and radiologists.

Lists and definitions of the most common pathologies likely to be encountered during specific procedures helps you understand the whole patient and produce radiographs that will make diagnosis easier for the physician. Labeled radiographs identify key radiographic anatomy and landmarks to help you determine if you have captured the correct diagnostic information on your images. "Evaluation Criteria" for each projection provide standards for evaluating the quality of each radiograph and help you produce the highest quality images. "Clinical Indications" sections explain why a projection is needed or what pathology is demonstrated to give you a better understanding of the reasoning behind each projection. Increased emphasis on digital radiography keeps you up to date with the most recent advances in technology. Completely updated content offers expanded coverage of important concepts such as, digital imaging systems, updated CT information and AART exam requirements. More CT procedures with related sectional images, especially for areas such as skull and facial bones, reflect the shift in the field from conventional radiography to CT. Updated art visually demonstrates the latest concepts and procedures with approximately 500 new positioning photos and 150 updated radiographic images. Additional critique images provide valuable experience analyzing images to prepare you to evaluate your own images in the practice environment. Updated "Technique" and "Dose" boxes reflect the higher kV now recommended for computed and digital radiography. "Imaging Wisely" program information from ASRT provides protocols to minimize radiation exposure during digital procedures. The latest standards for computed radiography and digital radiography (CR/DR) from the American Association of Physicists in Medicine ensures you are current with today's procedures and modalities."
