Marcus Heidmann explores the role of management accounting systems (MAS) in strategic sensemaking. Based on cognitive theories, the author defines strategic sensemaking as a learning process with observation, interpretation, and communication as the relevant process steps on the individual level. He illustrates the impact of MAS on these cognitive processes by an exploratory multiple-case study design.

This book is based on a research project sponsored by the European Commission (DG XII, Human Dimension of Environmental Change). It focuses on how companies calculate environmental costs in support of management decisions, exploring the possible contribution that management accounting may make to environmental management in a European context. A conceptual framework is developed within which the relationship between the two activities can be charted and analyzed. The work is based on a survey of 84 European companies and 15 company-based case studies in Italy, Germany, the Netherlands and the UK. The project produced unique empirical materials. It affords important insights into how companies can apply the principles of environmental accounting.

It shows where existing accounting structures are helpful and where new sources of information are needed to address the environmental issues with which companies are confronted. It shows the potential usefulness of different accounting concepts and techniques in the environmental area.

Advanced Corporate Accounting - Semester IV [CBCS-Bangalore University] UVK Verlag

Management accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for management accounting and control. Management Accounting is becoming more and more international. Management Accounting and Control is a new textbook in English covering concepts and instruments of management accounting at an introductory level (primarily at the Bachelor level, but also suited for general management and MBA courses due to a strong focus on practical relevance). This textbook covers all topics that are relevant in management accounting in business organizations that are typically covered in German and Central European Bachelor courses on management accounting and control. After a general introduction to the field of management accounting and control the book discusses cost management as an extension of cost

accounting. Typical cost management instruments such as target costing, life cycle costing and process-based costing approaches are explained in detail. Differences between Anglo-American activity-based costing (ABC) and German process-based costing are highlighted. The book then turns to an extensive discussion of planning and budgeting tasks in management accounting with a strong focus on the practical application of the topic such as developing a budget in practice. Another chapter is dedicated to a comparison of traditional budgeting with modern /alternative budgeting approaches. A major part of the book is dedicated to the broad area of performance management. The relevance of financial statement information for performance management purposes is discussed in detail. In addition, the most widely spread financial performance indicators are illustrated using real-world examples. The book also includes detailed content on value-based management control concepts. In a consecutive chapter, performance measurement is linked with strategy while extensively discussing the Balanced Scorecard as a key tool in strategic performance management. The remaining parts of the book deal with management reporting as one of the main operative tasks in management accounting practice. The book closes with insight into new fields and developments that currently influence management accounting practices and research and promise to play an increasingly important role in the future.

Management Accounting Emerald Group Publishing

Management accounting has undergone significant evolution moving away from rigid budgeting programs and static output measures to comprehensive approaches of value identification

and measurement. The book provides case studies, commentary and analysis from international experts in management accounting across the contemporary focus areas.

Fundamentals of Management Accounting John Wiley & Sons

This book explores two combined approaches (strategy and accounting) from a cross-disciplinary perspective in order to improve knowledge of value creation in various contexts. Existing studies on this topic have generally adopted a purely account-based or strategy-oriented approach to address this issue.

However, this book draws upon a number of well-defined theoretical and empirical backgrounds and methodologies. Since the 1980s, many changes have occurred and companies have increasingly focused their strategies on value creation. Consequently, new strategic directions have emerged, especially for managerial accounting. Management accounting and alignment with strategy could thus improve performance. This book encourages further thought and reflection on these issues which should be pursued in the future as firms face new challenges associated with the acceleration of digital transformation.

Review of Contemporary Developments McGraw-Hill Education

This book adopts a new and accessible approach to helping readers understand how management accounting contributes to decisions in a variety of organisational contexts. It sets out clear explanations of practical management accounting techniques in the context of the application of these techniques to decisions. It recognizes practice through case studies and summarises published research. Uniquely, it examines the analytical and

critical issues that often influence decision makers operating within private and public sector organisations. Key features include: - Case studies of varying complexity that will allow students to work at their own level - Summaries of important research articles - Key learning objectives and end of chapter questions.

Management Accounting and Control Springer

Management Accounting is written for students in international Business Management study programs. It covers the widely applied syllabus of Cost Accounting and Management Accounting at universities on bachelor's and master's level. The book is based on more than 20 years' academic teaching experience in Germany and at international universities in South Africa, Malaysia, China, the Netherlands and South Korea. In this text book, the application of methods and instruments comes first. Management Accounting follows a case study based approach. All cases are taken from previous exam papers and explained in detail. The text book starts with a case study of a manufacturing company and compares Financial Accounting to Management Accounting. It covers two point of views: (1) a General Management view, with aspects of business planning, cost-volume-profit analysis, degree of operating leverage, mergers and cross-border acquisitions and risk valuation. (2) a Cost Accounting view with Management Accounting systems, flexible budgeting, cost allocations, performance measurement and monitoring, reporting, calculation, manufacturing accounting (job order and process costing), activity based costing and multi-level contribution margin Accounting. On the UVK website, numerous exam tasks and complete solutions thereto are available in

English.

Introduction to Management Accounting Advanced Corporate Accounting

The book starts with a comparison of financial accounting and management accounting - both discussed based on the production firm PENOR Ltd. It further demonstrates accounting work in support of general management (CVP-analysis, DOL, performance measurement, risk management and M&A) as well as cost accounting (structures for absorption and marginal cost accounting systems, internal cost allocations, reporting, monitoring, manufacturing accounting/calculation, contribution margin accounting and activity based costing). The content is explained by detailed case studies. This Asia edition also includes real case studies about companies in Malaysia. All chapters outline the learning objectives, provide an overview, include case studies and how-it-is-done-paragraphs. They end with a summary, the explanation of new technical terms and a question bank with solutions for checking your learning progress. On the internet, you can find more than 300 exam tasks with solutions as well as youtube-videos from the authors.

This book analyzes the impact of digitization on management accounting in five manufacturing companies. It is one of the first

in-depth empirical studies on the intersection of management accounting and digitization. The study suggests that there are two archetypes of digitization of the management accounting function. The first archetype emphasizes top-down-driven changes that aim to enhance efficiency, such as conducting tasks with a higher degree of automation in a leaner structure with fewer resources. The second archetype is strongly driven and initiated by employees in the management accounting function (bottom-up). The focus is on improving the use of data by applying innovative analytics methods, integrating additional sources of data, and benefiting from new technologies like artificial intelligence. The results of the study also indicate that digitization of the management accounting function is mostly in line with the overall company strategy.

Management Accounting in the Digital Economy SAGE

This book is the first in the management accounting framework literature to provide readers with insights on how to manage revenue and profit models by developing relationships with customers. The Principal Editor, Professor Kenichi Suzuki, is the founding father of Fixed Revenue Accounting (FRA) and his inputs offer invaluable insights on how businesses can increase revenue and adopt preventative measures to deal with the fluctuations in the economy. FRA is a new management accounting tool that evaluates and manages the impacts of fixed customers on a company's financial health. 'Fixed customers' refer to frequent or regular customers who are expected to repeat their purchases. Their repeated purchases produce stability of revenue which in turn creates a stable profit environment and certainty. The profitability and stability generated by fixed customers can be utilized for strategic management, planning, and decision making to encourage investment for future growth. This book provides a deep understanding of the usefulness of the new management accounting tool, and covers both the introduction of the concept of FRA and accompanying case studies in the contexts of Japanese manufacturing and service companies adopting the FRA model by examining profitability, stability, and growth analysis.
