Water Wave Mechanics For Engineers And Scientists

Career Examination Passbooks

IN SLOCUM'S WAKE, written for sailors and non-sailors alike, is an autobiographical tale of a hard-won circumnavigation aboard a 43-foot cutter. This story will entice, entrance and inspire the reader whether you intend to embark on your own voyage or just enjoy a good adventure saga. With a primary focus on the remarkable people and places encountered during nearly five years at sea, IN SLOCUM'S WAKE also offers those who are planning their own long-distance off-shore exploit invaluable advice and data about best routes, strategies, stops, services and tricks of the trade. If you have always dreamed of undertaking such a journey, IN SLOCUM'S WAKE will either help you summon the courage to actually take the leap or convince you it's really not worth the risk or trouble you will surely encounter along the

watery way. It's impossible to sail around the world without facing some of the most challenging experiences of your life. On the flip side, you will also surely discover the most sublime and exhilarating moments and memories guaranteed to stay with you for the rest of your earthbound days. Nat Warren-White's five-year journey follows many of the same passages and roughly traces much of the route followed by Joshua Slocum who, in the late 1800s, became the first person to sail alone around the world. IN SLOCUM'S WAKE compares the challenges Warren-White faced aboard his South African-built sloop, BAHATI, with those faced by Slocum aboard his 37-foot Chesapeake Bay oyster-fishing vessel, SPRAY . The two boats are similar in design and capability though built more than 100 years apart, one in wood, the other in fiberglass. The two captains are similar in background and stature, though born almost 100 years apart. To both men, navigating the world's oceans came from a similar motivation: "...a natural outcome of [a] love of adventure, [and] of [our] lifelong experience" in, on and around the sea.

Motor Grader Operator Outskirts Press

The Motor Grade Operator Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. It provides hundreds of questions and answers in the areas that will likely be covered on your upcoming exam.

Associate Administrator World Scientific Publishing Company

The Sanitation Supervisor Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. It provides hundreds of questions and answers in the areas that will likely be covered on your upcoming exam,

including but not limited to: preparation, completion and review of forms, reports and logs; making required notifications; communicating information; assigning and reassigning work; monitoring and inspecting subordinates; training, counseling and evaluating subordinates; performing field duties; maintaining, securing and safeguarding department property; and more.

The Associate Administrator Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study.

Proceedings Passbooks

This book is intended as an introduction to classical water wave

theory for the college senior or first year graduate student. The material is self-contained; almost all mathematical and engineering concepts are presented or derived in the text, thus making the book accessible to practicing engineers as well. The book commences with a review of fluid mechanics and basic vector concepts. The formulation and solution of the governing boundary value problem for small amplitude waves are developed and the kinematic and pressure fields for short and long waves are explored. The transformation of waves due to variations in depth and their interactions with structures are derived. Wavemaker theories and the statistics of ocean waves are reviewed. The application of the water particle motions and pressure fields are applied to the calculation of wave forces on small and large objects. Extension of the linear theory results to several nonlinear wave properties is presented. Each chapter concludes with a set of homework problems exercising and sometimes extending the material presented in the chapter. An appendix provides a description of nine experiments which can be performed, with little additional equipment, in most wave tank facilities.
