The Second Edition follows up on the interest generated by the successful first edition with more syndromes, more

illustrations, updated references, and new chapters. The purpose of the book remains the same-to provide a quick overview of the definition, anatomy, etiology, clinical symptoms and signs, and treatment of tunnel syndromes. The new edition continues to probe the origins of these painful syndromes and to propose the possible causes that lead to them. The Overview section introduces the significance of tunnel syndromes and offers a new chapter devoted to the neurophysiology and electrodiagnosis of compression syndromes. It includes information on basic electromyography analysis, nerve conduction velocity testing, problems with electromyography

interpretation, and the clinical use of electrodiagnostic tests. Part I presents tunnel syndromes of the upper extremities, Part II is devoted to the trunk, and Part III discusses the lower extremities. The final section addresses how particular tunnel syndromes affect athletes. For each syndrome, the etiology, clinical symptoms and signs, and treatment are examined in detail. Orthopedists, neurosurgeons, neurologists, sports medicine specialists, occupational and physical therapists, and medical doctors and students will all find the Second Edition of Tunnel Syndromes to be an essential update for their reference libraries.

On January 6, 1537, Lorenzino de' Medici murdered Alessandro de' Medici, the duke of Florence. This episode is significant in literature and drama, in Florentine history, and in the history of republican thought, because Lorenzino, a classical scholar, fashioned himself after Brutus as a republican tyrant-slayer. Wings for Our Courage offers an epistemological critique of this republican politics, its invisible oppressions, and its power by reorganizing the meaning of Lorenzino's assassination around issues of gender, the body, and political subjectivity. Stephanie H. Jed brings into

brilliant conversation figures including the Venetian nun and political theorist Archangela Tarabotti, the French feminist writer Hortense Allart, and others in a study that closely examines the material bases—manuscripts, letters, books, archives, and bodies—of writing as generators of social relations that organize and conserve knowledge in particular political arrangements. In her highly original study Jed reorganizes republicanism in history, providing a new theoretical framework for understanding the work of the scholar and the social structures of archives, libraries, and erudition in which she is inscribed.

Idriss Aberkane non si stanca di ricordarci l'importanza di una sperimentazione libera, capace di sfidare certezze, conformismo e gerarchie figlie delle ideologie del passato. «Memoria, concentrazione,

apprendimento... Come potenziare la propria intelligenza grazie alle neuroscienze. Il libro esplosivo di Idriss Aberkane» Le Point - Idriss Aberkane «La felicità non è incompatibile con la produttività, anzi, al contrario: chi è felice è migliore nella scuola, nel lavoro, nella politica. È dimostrato scientificamente.» Il Secolo XIX «Inseguendo il sapere ma trascurando i sensi abbiamo perso il "sapore". Che invece è fondamentale. Steve Jobs ci ha insegnato una grande lezione quando ha detto che per avere successo è cruciale inseguire la propria passione. Perché per riuscire davvero ci vuole una grande resistenza, e solo se una cosa ci interessa davvero

possiamo trovare la forza di non rinunciare alle prime avversità. » Robinson - la Repubblica - Idriss Aberkane Ogni sette anni la quantità di conoscenze a disposizione dell'umanità raddoppia di numero. Con una velocità prima inimmaginabile, giorno dopo giorno circolano nel mondo milioni di nuove informazioni. Ma, sostiene Idriss Aberkane nel suo «trattato» audace e visionario, a questa impressionante quantità di informazioni corrisponde ben poca saggezza; e una società che produce informazioni senza saggezza finirà per autodistruggersi. Ebbene, lo strumento più potente per affrontare qualsiasi

sfida e ritrovare la strada della saggezza noi lo possediamo già, ed è il nostro cervello; e l'osservazione e lo studio delle persone considerate «fenomeni», come i «calcolatori prodigio», indicano la strada da percorrere. Questa strada, però, è disseminata di ostacoli. Primo fra tutti il sistema dell'istruzione, che premia il conformismo, l'individualismo, l'«alimentazione forzata» del cervello, scoraggiando la condivisione, il senso critico e ciò che accomuna da sempre tutte le grandi menti, da Socrate a Leonardo da Vinci, a Einstein e Nikola Tesla: l'amore, la passione, la libera scelta di percorrere nuove strade. Liberare il cervello significa

conoscerlo veramente nelle sue vere potenzialità come nei suoi limiti. Di questo tratta la «neuroergonomia», e in queste pagine ne ritroviamo tutti i campi di applicazione, dal marketing alla politica, dalla scuola alla medicina, alla tecnologia. Perché nel nostro cervello c'è molto più di quanto siamo stati finora in grado di creare, ed è solo partendo dalla sua conoscenza che spalancheremo davanti a noi le porte di un nuovo Rinascimento. Avete mai sentito parlare di Neuroergonomia? Idriss Aberkane ci spiega come imparare a sfruttare l'enorme potenziale della nostra mente. [Greek Medical Papyri](#)

When the first edition of Clinical studies in Neuro-Psychoanalysis was published in 2000, it was hailed as a turning point in psychoanalytic research. It is now relied on as a model for the integration of neuroscience and psychoanalysis. It won the NAAP's Gradiva Award for Best Book of the Year 2000 (Science Category) and Mark Solms received the International Psychiatrist Award 2001 at the American Psychiatric Association's annual meeting. The authors have added a glossary of key terms of this edition to aid their introduction to depth neuropsychology. 'Freud, in his 1895 Project for a Scientific Psychology, attempted to join the emerging

discipline of psychoanalysis with the neuroscience of his time. But that was a hundred years ago, when the neuron had only just been described, and Freud was forced - through lack of pertinent knowledge - to abandon his project. We have had to wait many decades before the sort of data which Freud needed finally became available. Now, these many years later, contemporary neuroscience allows for the resumption of the search for correlations between these two disciplines. *Orientarsi in un mondo ridisegnato dall'Alzheimer. A bold look at the body as a source of contention for those who suffer from personality disorders. This work connects interpersonal neurobiology, attachment theory, and psychoanalytic theory with cognitive

and neuroscientific work on implicit memory, trauma theory, and dissociation to propose an integrated method for treating severe borderline and narcissistic disorders, with the prime aim of resolving the affect dysregulation that affects the various realms of bodily discomfort and existential pain. Each chapter presents a particular case and illustrates the methods for working with the specific problems that arise: from bulimia to self-cutting to sexual identity diffusion to suicidality. Treatment is illustrated from the initial level of careful diagnosis to the first stages of the interaction to the further steps and development of the

interpersonal work of the dyad patient-therapist, including powerful enactments. In accessible language that references psychodynamic and relational psychoanalytic theory, the book proposes a revision of the etiopathogenesis of personality disorders, starting from the traumatic interpersonal exchanges (early relational trauma, maltreatment, deprivation, and abuse). The book breaks new ground on several levels. For the first time the body is accorded full attention in the treatment: developmentally and epigenetically situation as it is "in-between" the self and the other (at first, the caregiver, then in other circumstances of

upbringing and traumatic personal relationships). The body is viewed as the main vehicle of this dysfunctional development, so that both the body and the subject are at once the "victim"—the recipient of the dysregulation resulting in impulsivity, destructiveness, self-harm, or eating disorders—and the internalized persecutor, i.e. the abuser of one's own body that sometimes also becomes the aggressor of others. Profoundly humane and scientifically sound, this book is a must-read for professionals, clients, and families involved in the difficult task of relieving the symptoms and reorganizing the personalities of subjects living in

"borderline bodies."

This book presents a semiotic study of the re-elaboration of Christian narratives and values in a corpus of Italian novels published after the Second Vatican Council (1960s). It tackles the complex set of ideas expressed by Italian writers about the biblical narration of human origins and traditional religious language and ritual, the perceived clash between the immanent and transcendent nature and role of the Church, and the problematic notion of sanctity emerging from contemporary narrative.

Local-regional anesthesia and pain therapy represent two areas of common interest for all physicians. A thorough preparation in functional anatomy and general pharmacology, including familiarity with local anesthetics and analgesics, is considered fundamental background for further study or clinical application of such techniques. Knowledge of the mechanisms of action, efficacies and side effects of the relevant drugs is essential, as is appreciation of possible drug interactions to evaluate eventual toxic effects. Local-regional

anesthesia and pain management are being increasing used in diverse medical specialties, including those requiring manual dexterity. In contemporary medicine correct evaluation of the medical outcome becomes essential, especially in relation to the cost-benefit balance, not only in terms of the resources consumed, also and more importantly for the quality of life of the patient.

The volume collects papers presented at the International Conference "Greek Medical Papyri - Text, Context, Hypertext" held at the University of Parma on November 2-4, 2016, as the final event of the ERC project DIGMEDTEXT, aimed primarily at creating an online textual database of the Greek papyri dealing with medicine. The contributions, authored by outstanding papyrologists and historians of the ancient medicine, deal with a variety of topics focused on the papyrological evidence of ancient medical texts and contexts. The first part, devoted to

"medical texts", contains some new reflections on important sources such as the Anonymus Londinensis and the Hippocratic corpus, as well as on specific themes like the pharmacological vocabulary, the official medical reports, the medical care in the Roman army. The second part collects papers about the "doctors' context", providing highlights from broader viewpoints like the analysis of the writing supports, the study of the ostraka from the Eastern Desert, the evidence of inscriptions and philosophical texts. The third part is entirely focused on the DIGMEDTEXT project itself: the team members present some relevant key

issues raised by the digitisation of the medical papyri.

A fifteen-year-old boy is walking through a swirling fog on his way to school when a voice calls out, "Come here. We need to talk." Out of the mist emerges an old man with a white beard. He is a fantastic figure, as wizardly as Merlin, as wise as Socrates, as peaceful as Buddha. Whoever he is, the old man has appeared on that very day to change the

boy's life. "You are old enough to learn about things," he says mysteriously. "And who is going to teach you but me?" The old man gives the boy four days of "soul training," a time of riddles, tricks, parables, and incredible twists that brings out surprising answers to each of four burning questions about spirituality: Do I have a soul? How do wishes come true? What is the supreme force in the universe? How can I change the world? "The old man with the white beard showed me the spiritual side of life," writes Deepak Chopra, "where real passion and excitement come from. So before you begin, take a deep breath. This story could turn out to be yours."

«La critica letteraria è in via di sparizione sia perché gran parte dell'attuale letteratura non è più un oggetto che abbia interesse critico, sia perché gli studiosi non è detto che siano lettori

interessati a formulare giudizi.» Queste righe di Alfonso Berardinelli potrebbero suonare come un addio alla critica letteraria. E in effetti sembrano spiegare perché in *Giornalismo culturale* la critica letteraria sia in netta minoranza. Dal 2013 al 2020, periodo nel quale sono stati scritti gli articoli qui raccolti, l'oggetto privilegiato non è la letteratura, ma la cultura nel suo insieme: le idee correnti o dominanti, le élite intellettuali, i linguaggi, le istituzioni, le mode culturali, i luoghi comuni del discorso politico e gli effetti della rete sulla vita di tutti. Eppure quello di Berardinelli è un giornalismo culturale anomalo e singolarmente enciclopedico. È

soprattutto analisi del conformismo sociale, delle sue ragioni e delle forme in cui si manifesta. Ed è contraddistinto da una grande mobilità critica a partire dalla grande varietà di occasioni, spunti e casi offerti dall'attualità e dalla cronaca - cui fa da corrispettivo una grande varietà di stili, che spaziano dalla dialettica argomentativa all'ironia distanziante alla vera e propria satira culturale. Una satira tanto più necessaria da quando arti, scienze, filosofia e letteratura sono viste come valori in sé, attività autogarantite e indiscutibili per principio, al punto da far sembrare scorretta o inconcepibile qualunque valutazione selettiva e qualitativa

che orienti in una cultura di massa in continua espansione e da cui gli stessi intellettuali sono stati conquistati, ipnotizzati e disarmati. Per Berardinelli il giornalismo culturale è un genere letterario nel quale esprimersi pienamente, in prima persona, con le proprie insofferenze e idiosincrasie, praticato attraverso la critica dei linguaggi specializzati e gergali a partire dalla lingua comune e da un'ottica che non trascura mai di mettere a confronto le parole e le cose, le maschere culturali e le realtà di fatto, per quanto ambigue e sfuggenti siano. Un punto di vista inconsueto sul reale, attraverso cui scoprire verità prima celate.

Sex and Gender Differences in Alzheimer's Disease: The Women's Brain Project offers for the first time a critical overview of the

evidence documenting sex and gender differences in Alzheimer's disease neurobiology, biomarkers, clinical presentation, treatment, clinical trials and their outcomes, and socioeconomic impact on both patients and caregivers. This knowledge is crucial for clinical development, digital health solutions, as well as social and psychological support to Alzheimer's disease families, in the frame of a precision medicine approach to Alzheimer's disease. This book brings together up-to-date findings from a variety of experts, covering basic neuroscience, epidemiology, diagnosis, treatment, clinical trials

development, socioeconomic factors, and psychosocial support. Alzheimer's disease, the most common form of dementia, remains an unmet medical need for the planet. Wide interpersonal variability in disease onset, presentation, and biomarker profile make Alzheimer's a clinical challenge to neuroscientists, clinicians, and drug developers alike, resulting in huge management costs for health systems and society. Not only do women represent the majority of Alzheimer's disease patients, but they also represent two-thirds of caregivers. Understanding sex and gender differences in Alzheimer's disease will lead to novel

insights into disease mechanisms, and will be crucial for personalized disease management strategies and solutions, involving both the patient and their family.

Endorsements/Reviews : "There is a clear sex and gender gap in outcomes for brain health disorders like Alzheimer's disease, with strikingly negative outcomes for women. This understanding calls for a more systematic way of approaching this issue of inequality. This book effectively highlights and frames inequalities in all areas across the translational spectrum from bench-to-bedside and from boardroom-to-policy and economics. Closing the Brain Health Gap will help economies create

recovery and prepare our systems for future global shocks." Harris A. Eyre MBBS, PhD, co-lead, Neuroscience-inspired Policy Initiative, OECD and PRODEO Institute. Instructor in Brain Health Diplomacy, Global Brain Health Institute, UCSF and TCD. "Sex and Gender Differences in Alzheimer's disease is the most important title to emerge on Alzheimer's disease in recent years. This comprehensive, multidisciplinary book is a must read for anyone with a serious interest in dementia prevention, diagnosis, treatment, care, cure and research. Precision medicine is the future of healthcare and this book represents an incredible and necessary resource to

guide practice, policy and research in light of the fact that Alzheimer's disease disproportionately affects women. The combination of contributions from the most eminent experts and the most up-to-date research makes this an invaluable resource for clinicians, care providers, academics, researchers and policy makers. Given the complex nature of dementia and the multiple factors that influence risk and disease trajectory the scope of the book is both impressive and important covering sex differences in neurobiological processes, sex and gender differences in clinical aspects and

gender differences linked to socioeconomic factors relevant to Alzheimer's disease. If you work in Alzheimer's disease, or indeed other dementias, then Sex and Gender Differences in Alzheimer's disease is a must have for your bookshelf." -- Sabina Brennan, PhD., C.Psychol.,PsSI., National representative for Ireland on Alzheimer Disease International's Medical and Scientific Advisory Panel
