Essentials of Chemical Reaction Engineering

W. W. Norton

Appropriate for one-semester courses in Business Law at both college and university levels in Alberta. This Alberta-specific text proceeds beyond general principles of law and describes the case law and particular statutory provisions that regulate business in Alberta. Legal concepts and Canadian business applications are introduced in a concise, one-semester format. The text is structured so that five chapters on contracts form the nucleus of the course, and the balance provides stand-alone sections that the instructor may

choose to cover in any order. The design is more reader-friendly, with a visually-appealing four-colour format as well as case synopses and extracts to enliven the solid text. The result is a book that maintains the strong legal content of previous editions while introducing more real-life examples of business law in practice.

Like no other text for the intermediate microeconomics course, Goolsbee, Levitt, and Syverson's *Microeconomics* bridges the gap between today's theory and practice. A strong empirical dimension tests theory and successfully applies it. With carefully crafted features and vivid examples, Goolsbee, Levitt, and Syverson's text helps answer two critical questions students ask, "Do people and firms really act as theory suggests"

and "How can someone use microeconomics in a practical way?" The authors teach in economics departments and business schools and are active empirical microeconomics researchers. Their grounding in different areas of empirical research allows them to present the evidence developed in the last 20 years that has tested and refined the fundamental theories. Their teaching and professional experiences are reflected in an outstanding presentation of theories and applications.
