NURSING: CONCEPTS OF PRACTICE presents a thorough description of the development of the self-care deficit nursing theory and illustrates its relevance to nursing practice with a common sense approach. The text presents the foundations of nursing as a field of knowledge and practice and provides an approach to "knowing and thinking nursing," which forms the basis and organizing framework for nursing actions in all types of practice situations.

Thoroughly revised and updated, it contains five new chapters and three revised chapters, expanding upon the importance of nursing practice models and the stages of development within the models.

Theoretical Basis for Nursing Armando Editore

Obesity is currently regarded as one of the major health challenges of the developed world. Excess body weight is an important risk factor for morbidity and mortality from cardiovascular diseases, diabetes, cancer, musculoskeletal disorders and even psychiatric problems and is estimated to cause nearly 3 million deaths per year worldwide.

Obesity is not necessarily associated with comorbidities: there are indeed metabolically healthy obese individuals. Thus, we need to consider individuals presenting simple with obesity separately from those at risk of developing or who have already developed complex clinical states potentially leading to

disability. Comorbidities can tip the balance of independence in patients who already have functional limitations mainly due to the excess of mass itself or who develop conditions such as diabetes, cardiovascular conditions, non-alcoholic fatty liver disease, where an abnormal metabolism of adipose tissue prevails. Morbid obesity with comorbidities leading to disability represents a real social and economic burden for National Health Systems worldwide. The presence of multiple and associated comorbidities often represents an obstacle to being admitted to hospitals for the treatment of metabolic diseases. On the other hand, clinical units with optimal standards for the treatment of pathological conditions in normal-weight patients are often structurally and technologically inadequate for the care of patients with extreme obesity. The aim of this book is to focus on the pathophysiological and rehabilitative aspects of disabling obesity, highlighting multidisciplinary rehabilitation interventions as key to

counteracting the disabling aspects of complicated obesity. *NANDA International Nursing Diagnoses* Creative Health Care Management, Inc This innovative text uses concrete examples and hands-on exercises to help readers clearly understand and apply the five steps of the nursing process. Wellness concepts and independent critical thinking, major emphases of this text, are incorporated into each step of the nursing process. Book provides extensive treatment of collaborative practice and delegation, critical thinking, case management and critical pathways. For those interested in understanding the nursing process within a framework for providing holistic care.

Il testo si propone come strumento di consultazione nella pratica clinica degli infermieri, tecnici e riabilitatori. Il tipo di stesura ed il grado di profondità della trattazione perseguono lo scopo di orientare tali figure professionali nella conoscenza clinica, diagnostica, terapeutica e

assistenziale della neurochirurgia. Dopo un richiamo all'anatomia cranio-vertebrale e del sistema nervoso centrale e periferico, vengono presentate le principali metodiche diagnostiche neuroradiologiche e neurofisiologiche e le patologie neurochirurgiche di maggiore rilevanza, sia dell'adulto che del bambino, corredandole delle necessarie e specifiche note di assistenza. Una particolare attenzione è rivolta anche alle patologie di interesse della neurochirurgia funzionale. Un ampio apparato iconografico arricchisce il testo mediante tabelle, immagini di esami diagnostici e disegni che stimolano un apprendimento di tipo visivo.

This book is based on the 9th International Conference in Methodologies and Intelligent Systems for Technology Enhanced Learning, which was hosted by the University of Salamanca and held in Ávila (Spain) from 26th to 28th June 2019.

Expanding on the topics of the evidence-based TEL workshops series, it provides an open forum for discussing intelligent technologies for learning. In particular, it discusses recommendation mechanisms that enable us to tailor learning to different contexts and people, e.g., by considering their personality; and learning analytics that help augment learning opportunities, e.g., by supporting the adaptation of the learning material. In addition to technologies, it covers methods from different fields, such as educational psychology or medicine, and from diverse communities co-working with people, such as making communities and

participatory design communities to help create novel TEL opportunities. Further it describes the use of methods and technologies to investigate and enhance learning for "fragile users", like children, the elderly and those with special needs. We thank the sponsors: IEEE Systems Man and Cybernetics Society Spain Section Chapter and the IEEE Spain Section (Technical Co-Sponsor), IBM, Indra, Viewnext, Global exchange, AEPIA, APPIA and AIR institute.

This book is designed to be a physician's guide for those interested in diving and hyperbaric environments. It is not a detailed document for the erudite researcher; rather, it is a source of information for the scuba-diving physician who is

searching for answers put to him by his fellow nonmedical divers. Following the publication of The Underwater Handbook: A Guide to Physiology and Performance for the Engineer there were frequent requests for a companion volume for the physician. This book is designed to fill the void. Production of the book has been supported by the Office of Naval Research and by the Bureau of Medicine and Surgery, Research and Development Command, under Navy Contract No. N000014-78-C-0604. Our heartfelt thanks go to the many authors without whose contributions the book could not have been produced. These articles are signed by the responsible authors, and the names a~e also listed alphabetically in these preliminary pages. Every chapter was officially reviewed by at least one expert in the field covered and these reviewers are also listed on these pages. Our thanks go to them for their valuable assistance. We are grateful to Marthe Beckett Kent for editing Chapter III. Our thanks also go to Mrs. Carolyn Paddon for typing and retyping the manuscripts, and to Mrs.

Catherine Coppola, who so expertly handled the many fiscal affairs.
