Algebra 1 7-1 Integer Exponents Notice the phrase “nonzero number” in the previous table. This is because 0<sup>0</sup> and 0 raised to

a negative power are both undefined. For example, if you use the pattern given above the table with a base of 0 instead of 5, you would get  $0^0 = .$  Also  $0^{-6}$  would be  $= .$  7-1 Integer Exponents - Geary County USD 475 LESSON Practice C 7-5 Polynomials. For problems 1 - 4 evaluate the given expression and write the answer as a single number with no exponents. For problems 5 - 9 simplify the given expression and write the answer with only positive exponents. Algebra - Integer Exponents (Practice Problems) Examples: 3 raised to the power of 4 is written

$3^4 = 81$ . -4 raised to the power of 2 is written  $(-4)^2 = 16$ . -3 raised to the power of 3 is written  $(-3)^3 = -27$ . Note that in this case the answer is the same for both  $-3^3$  and  $(-3)^3$  however they are still calculated differently.  $-3^3 = -1 \cdot 3 \cdot 3 \cdot 3 = -27$ .
