"Western neglecting traditional religion is an important factor for the failure of many developmental strategies towards Africa. Therefore, religion(s) of the indigenous peoples must be given the necessary attention. The book presents the example of the Shona religion playing a critical role in the life of the Zimbabweans. If incorporated, it will contribute to the better success of development initiatives." --back cover

The Energy of Life

Boydell & Brewer
'What are we going to do with a parcel of old stones?' wrote the director of an African museum a century and a half ago, when one of my ancestors presented him with a splendid collection of fossils of mammal-like reptiles. Old stones, however intriguing, are difficult to interpret, dusty, and do not fit well

in the neatly ordered contents of a house of learning. Archaean geology, which is the study of the Earth's history in the period from after 9 the end of planetary accretion (4.5-4.4 x 10 years ago) up to the beginning 9 of the Proterozoic (2.5 x 10 years ago) is much the same - a parcel of old stones seemingly impossible to understand. Yet these stones contain the history of our origins: they can tell us a story that is interesting not just to the geologist (for whom this book is primarily written) but instead addresses the human condition in general. *Missional Church* Columbia University Press
"What is development? Who defines that one community/ country is "developed", while another community/ country is "underdeveloped"? What is the relationship between religion and development? Does religion contribute to development or underdevelopment in Africa? These and related questions elicit quite charged reactions in African studies, development studies, political science and related fields. Africa's own

history, including the memory of marginalisation, slavery and exploitation by global powers ensures that virtually every discussion on development is characterised by a lot of emotions and conflicting views. In this volume scholars from various African countries and many different religions and denominations contribute to this debate."--

Commercial Directory Routledge

In the continent where Christianity is experiencing its most rapid growth, a great deal of this expansion is taking place in churches founded by Africans for Africans. These churches are often referred to as 'independent' or 'indigenous' churches, to distinguish them from the 'historic' or 'mission-founded' churches planted during the colonial period by evangelists from Europe and North America. Diverse as they are, the attractiveness of these African Initiatives in Christianity (AICs) stems from the serious attempt they make to express and live out their faith in genuinely African cultural forms and styles. In this new book, two African

theologians and church leaders -- one from an historic church, one from an AIC -- offer an insightful introduction into this phenomenon. While their main focus is on what the growth of African Initiatives in Christianity implies for the future of the ecumenical movement in Africa and around the world, they also examine some key teachings of the AICs and trace their roots in African church history since the first century.

The Energy of Life Africa Research and Publications
 What would a theology of the Church look like that took seriously the fact that North America is now itself a mission field? This question lies at the foundation of this volume written by an ecumenical team of six noted missiologists—Lois Barrett, Inagrace T. Dietterich, Darrell L. Guder, George R. Hunsberger, Alan J. Roxburgh, and Craig Van Gelder. The result of a three-year research project undertaken by The Gospel and Our Culture Network, this book issues a firm challenge for the church to recover its missional call right here in North America, while also offering the tools to help it do so. The authors

examine North America's secular culture and the church's loss of dominance in today's society. They then present a biblically based theology that takes seriously the church's missional vocation and draw out the consequences of this theology for the structure and institutions of the church.

Goatkeepers' Animal Health Care Manual HSRC Press

Marcia Pullman has been found dead at home in the leafy suburbs of Bulawayo. Chief Inspector Edmund Dube is onto the case at once, but it becomes increasingly clear that there are those, including the dead woman's husband, who do not want him asking questions. The case drags Edmund back into his childhood to when his mother's employers disappeared one day and were never heard from again, an incident that has shadowed his life. As his investigation into the death progresses, Edmund realises the two mysteries are inextricably linked and that unravelling the past is a dangerous undertaking threatening his very sense of self.

It is ideologically driven to build a group of church historians who will tell the story of African Christianity, not Christianity in Africa, as an African story, by intentionally privileging the patterns of African agency without neglecting the noble roles played by missionaries. The effort has been to identify the major themes or story lines in African encounters and in the appropriation of the gospel. --from publisher description.

The Sarashina Diary Parthian Books

There were hundreds of platforms rising into the air evenly dispersed throughout the terrain. I began to sprint, expertly weaving myself through the corridors between the platforms. My physical abilities had multiplied tenfold and I launched myself two metres into the air without breaking a sweat. These newfound abilities increased my aplomb immensely and it felt as if I could bulldoze the walls built by all those of my old world who sought to mute my voice.- Ruzivo Sibanda never thought she would escape the confines of her ordinary life. What will she do when faced with a strange new setting, flame-throwing chariots

and a Queen after her head? Read the adventure story of a life-time and see what happens when an ordinary human is cast into an extraordinary world.

Energy and Life Intl Food Policy Res Inst

Tracing the rise of Christianity to its key role in Europe's maritime and colonial expansion, this text sheds light on the ways in which societies in Africa, Asia, and Latin America have been drawn into the Christian orbit.

Energy of Life African Sun Media

This volume explores themes of ecotheology, ecofeminism, environmental pollution and degradation, climate change, human and environmental rights, sustainable development, human-animal relations through totem and taboo, sacred sites and spaces, and other environmental topics in ways that add immeasurably to the study of African environmentalisms and the interaction of law and religion. In terms of religion, the capability of humans not only to sin and destroy the earth, but also to repair and redeem it, is very much in evidence across Christianity, Islam and Africa's many indigenous

religious and cultural traditions. In terms of law, the need for effective policies and for states and governments to work with indigenous groups and communities towards environmental solutions is also apparent.

Central Africa University of Bamberg Press
Building Resilience and Adaptation to Climate Change (BRACC) is a five year program whose main objective is to strengthen the resilience of poor and vulnerable households to withstand current and future weather and climate-related shocks and stresses in four districts in Southern Malawi: Balaka, Chikwawa, Mangochi and Phalombe. Resilience is operationalized as the ability of households to smooth consumption in response to shocks and stresses. This baseline

report introduces the evaluation context and describes the BRACC program, details the evaluation design, summarizes main findings from the baseline household survey, and tests whether the randomizations successfully balanced baseline observable characteristics across the treatment arms.

Energy for Life Wm. B. Eerdmans Publishing

A thousand years ago, a young Japanese girl embarked on a journey from deep in the countryside of eastern Japan to the capital. Forty years later, with the long account of that journey as a foundation, the mature woman skillfully created an autobiography that incorporates many moments of heightened awareness from her long life. Married at age thirty-three, she identified herself as a reader and writer more than as a wife and mother; enthralled by fiction, she bore witness to the dangers of romantic fantasy as well as the enduring consolation of self-expression. This reader's edition streamlines Sonja Arntzen and Moriyuki Itō's acclaimed translation of the Sarashina Diary for general readers and

classroom use. This translation captures the lyrical richness of the original text while revealing its subtle structure and ironic meaning, highlighting the author's deep concern for Buddhist belief and practice and the juxtaposition of poetic passages and narrative prose. The translators' commentary offers insight into the author's family and world, as well as the style, structure, and textual history of her work.

Vols. for 1967-70 include as a section: Who's who of Rhodesia, Mauritius, Central and East Africa.

All Come to Dust

Folkens Museum
Etnografiska

A collection of essays which examine the crucial role of territory in the initiation, evolution, escalation and resolution of interstate and international conflict. It contains 2 maps and 29 tables and is edited by the editor of THE DYNAMICS OF ENDURING RIVALRIES.

The Three Jewels

University of Bamberg Press

Annotation Eight essays address the relation of any specific beginning of a text, a book, an

argument, a narrative to the originary moment of Jewish textual tradition. The two fundamental approaches are attending to the quotidian and obvious notion that any textual work claims a beginning, and the connection between rhetorical and cultural moves. No credentials are noted for the contributors. There is no index.

Energy and life,

Proceedings Vanderbilt University Press

Biochar is a carbon rich solid material resulting from the pyrolysis of biomass under oxygen-free and low temperature conditions. Although most research is directed towards the application of biochar to soils, there are several other biochar properties that render it a suitable candidate for non-soil applications. A growing number of studies have tested biochar as a composite in building materials, as a hazardous substance adsorbent in drinking water and wastewater, and as a component in filters for indoor air quality and storm water management. The potential to utilize biochar

for various applications depends on its properties. For example, biochar with high electrical conductivity, porosity and stability at lower temperatures is preferred as electrodes material in microbial fuel cells. Biochar containing relatively high structural bound oxygen groups is preferred in direct carbon fuel cells. On the other hand, biochars with increased particle strength, hydrophobicity and high surface area are suitable candidates for the development of reusable catalysts for chemical reactions. These new high-value applications are still in their infancy, and further research and development is needed to reach commercialization. Optimum reaction conditions for producing biochar are not always the same and reproducibility is often not satisfactory, even when the same biomass is used and the same production conditions are present. This book on non-soil biochar applications aims to highlight the diversity of biochar as a multi-functional material and introduce some new and emerging applications to the wider scientific community. It will act as a

reference document to all groups and individuals working or interested in biochar research and will be a valuable contribution to existing published literature.

Who's who of Southern Africa

Each volume of the Understanding World Christianity series analyzes the state of Christianity from six different angles. The focus is always Christianity, but it is approached in an interdisciplinary manner--chronological, denominational,

sociopolitical, geographical, biographical, and theological. Short, engaging chapters help readers understand the complexity of Christianity in the region and broaden their understanding of the region itself. Readers will understand the interplay of Christianity and culture and will see how geography, borders, economics, and other factors influence Christian faith. In this exciting volume, Paul Kollman and Cynthia Toms Smedley offer an introduction to

Eastern African Christianity that has been desperately needed by scholars, students, and interested readers alike. Rich in experience and knowledge, Kollman and Toms Smedley introduce readers to the vibrancy of Eastern African Christianity like no other authors have done before.

The Young Earth

This series of publications aims to fill the gaps in our history, highlighting in particular the significant roles played by black leaders from all walks of life.
