For Harry Redner, the
phrase “beyond

civilization” refers to the
new and unprecedented
condition the world is now
entering—specifically, the
condition commonly
known as globalization.
Redner approaches

globalization from the perspective of history and seeks to interpret it in relation to previous key stages of human development. His account begins with the Axial Age (700–300 BC) and proceeds through Modernity (after AD 1500) to the present global condition. What is globalization doing to civilization? In answering this question, Redner studies the role played by capitalism, the state, science and technology. He aims to show that they have had a catalytic

impact on civilization through their reductive effect on society, culture, and individualism. However, Redner is not content to diagnose the ills of civilization; he also suggests how they might be ameliorated by cultural conservation. Above all, it is to the problem of decline in the higher forms of literacy that he addresses himself, for it is on the culture of the book that previous civilizations were founded. This study will be of interest to sociologists, historians, and social and political

theorists. Its style makes it accessible also to general readers, interested in civilization past, present, and future. Civilization Mittal Publications
 “A lively popular history of an oft-overlooked element in the development of human society” (Library Journal)—walls—and a haunting and eye-opening saga that reveals a startling link between what we build and how we live. With esteemed historian David Frye as our raconteur-guide in Walls, which Publishers

Weekly praises as “informative, relevant, and thought-provoking,” we journey back to a time before barriers of brick and stone even existed—to an era in which nomadic tribes vied for scarce resources, and each man was bred to a life of struggle. Ultimately, those same men would create edifices of mud, brick, and stone, and with them effectively divide humanity: on one side were those the walls protected; on the other, those the walls kept out. The stars of this narrative

are the walls themselves—rising up in places as ancient and exotic as Mesopotamia, Babylon, Greece, China, Rome, Mongolia, Afghanistan, the lower Mississippi, and even Central America. As we journey across time and place, we discover a hidden, thousand-mile-long wall in Asia's steppes; learn of bizarre Spartan rituals; watch Mongol chieftains lead their miles-long hordes; witness the epic siege of Constantinople; chill at the fate of French

explorers; marvel at the folly of the Maginot Line; tense at the gathering crisis in Cold War Berlin; gape at Hollywood's gated royalty; and contemplate the wall mania of our own era. Hailed by Kirkus Reviews as “provocative, well-written, and—with walls rising everywhere on the planet—timely,” Walls gradually reveals the startling ways that barriers have affected our psyches. The questions this book summons are both intriguing and profound: Did walls make

civilization possible? And can we live without them? Find out in this masterpiece of historical recovery and preeminent storytelling.

Michel Foucault examines the archeology of madness in the West from 1500 to 1800 - from the late Middle Ages, when insanity was still

considered part of everyday life and fools and lunatics walked the streets freely, to the time when such people began to be considered a threat, asylums were first built, and walls were erected between the "insane" and the rest of humanity.

This new book offers an engineer's perspective on the history of water technology and its impact on the development of civilisation. A Second Edition and translation into English of the French book "L'Hydraulique dans les Civilisations Anciennes". Water professionals, engineers, scientists, and students will find this book fascinating and invaluable *Streams of Civilization* Transaction Publishers ...one of the biggest breakthroughs of all times... this is the

definitive proof that civilisation is thousands of years older than historians believe' -Colin Wilson 'A breakthrough book. The last four thousand years are never going to be the same again!' - Graham Hancock This is the amazing story of how a quest to try to crack the mystery of the Megalithic Yard - an ancient unit of linear measurement - led to the discovery of compelling evidence pointing to the existence of an unknown, highly advanced culture which was the precursor

to the earliest known civilizations such as the Sumerians and the Egyptians. There must have been a Civilization One. Knight and Butler reveal the secrets of an extraordinary integrated measuring system which might have been lost to the world for ever. It was a system, far more advanced than anything used today, which forms the basis of both the Imperial and Metric measure systems! These ancient scientists understood the dimensions, motions and

relationships of the Earth, Moon and Sun - they measured the solar system and even understood how the speed of light was integrated into the movements of our planet. Their conclusions fly in the face of everything that we thought we knew about the origins of the modern world - but the evidence is incontrovertible. And the implications of these revelations go far beyond the fascination of the discovery of a 'super-science' of prehistory;

they indicate a grand plan which will have far reaching theological ramifications!
Earliest Times to the Discovery of the New World Duncan Baird Publishers
This two-volume compilation of primary sources in world civilization is based around eight major themes to provide direction and cohesion to the text. Designed to involve students with important historical questions and controversies, the text

promotes thoughtful comparisons between world societies that are linked to common problems, events or themes within the same time period and across chronological divisions. Broad in scope, the text incorporates a wide variety of political, social, economic, religious, intellectual and scientific issues, and is designed to help students consider historical questions and concerns.

This lively text offers a

brief, readable description of our common Western heritage after Europe expanded into the rest of the world during the Renaissance, then through revolutions that have created today's technological global society. Providing a tightly focused narrative and interpretive structure, Brian A. Pavlac covers the basic historical information that all educated adults should know. His joined terms "supremacies and diversities" develop major themes of conflict and

creativity throughout history. "Supremacies" centers on the use of power to dominate societies, ranging from warfare to ideologies. Supremacy seeks stability, order, and incorporation. "Diversities" encompasses the creative impulse that produces new ideas, as well as the efforts of groups of people to define themselves as "different." Diversity creates change, opportunity, and individuality. These themes of historical

tension and change—whether applied to political, economic, technological, social, or cultural trends—offer a bridging explanatory organization. The text is also informed by five topical themes: technological innovation, migration and conquest, political and economic decision making, church and state, and disputes about the meaning of life. Throughout, judicious "basic principles" present summaries of historical realities and primary source projects offer

students the chance to evaluate differing points of view about the past. Written with flair, this easily accessible yet deeply knowledgeable text provides all the essentials for courses on Western Civilization.

An anthology of the

culture of ancient Israel, including its literature, legal documents, and visual arts "Readers seeking primary texts, documents, images, and artifacts constituting Jewish culture and civilization will not be disappointed. More important, they might even be inspired. . . . This set will serve to improve teaching and research in Jewish studies at institutions of higher learning and, at the same time, promote, maintain, and improve understanding of the

Jewish population and Judaism in general." -- Booklist, Starred Review
Volume 1 of The Posen Library covers the earliest period of Jewish civilization, from the second millennium BCE through 332 BCE. Organized by genre, this book presents a collection of some of the earliest products of Jewish culture, including extensive selections from the Hebrew Bible; extrabiblical inscriptions and documents by and about Israelites and Jews, found by archaeologists in

the lands of Israel, Egypt, and Mesopotamia; and images representing the visual culture of ancient Israel. Combining genres that have never been presented together in a single publication, Volume 1 illustrates ancient Israel's cultural innovations and commonalities with neighboring societies.

In 1177 B.C., marauding
groups known only as the
"Sea Peoples" invaded
Egypt. The pharaoh's
army and navy managed
to defeat them, but the
victory so weakened
Egypt that it soon slid into

decline, as did most of the
surrounding civilizations.
After centuries of
brilliance, the civilized
world of the Bronze Age
came to an abrupt and
cataclysmic end.
Kingdoms fell like
dominoes over the course
of just a few decades. No
more Minoans or
Mycenaeans. No more
Trojans, Hittites, or
Babylonians. The thriving
economy and cultures of
the late second
millennium B.C., which
had stretched from
Greece to Egypt and
Mesopotamia, suddenly

ceased to exist, along with writing systems, technology, and monumental architecture. But the Sea Peoples alone could not have caused such widespread breakdown. How did it happen? In this major new account of the causes of this "First Dark Ages," Eric Cline tells the gripping story of how the end was brought about by multiple interconnected failures, ranging from invasion and revolt to earthquakes, drought, and the cutting of international trade routes. Bringing to life the

vibrant multicultural world of these great civilizations, he draws a sweeping panorama of the empires and globalized peoples of the Late Bronze Age and shows that it was their very interdependence that hastened their dramatic collapse and ushered in a dark age that lasted centuries. A compelling combination of narrative and the latest scholarship, 1177 B.C. sheds new light on the complex ties that gave rise to, and ultimately destroyed, the flourishing

civilizations of the Late Bronze Age—and that set the stage for the emergence of classical Greece.

Dirt, soil, call it what you want—it's everywhere we go. It is the root of our existence, supporting our feet, our farms, our cities. This fascinating yet

disquieting book finds, however, that we are running out of dirt, and it's no laughing matter. An engaging natural and cultural history of soil that sweeps from ancient civilizations to modern times, *Dirt: The Erosion of Civilizations* explores the compelling idea that we are—and have long been—using up Earth's soil. Once bare of protective vegetation and exposed to wind and rain, cultivated soils erode bit by bit, slowly enough to be ignored in a single lifetime but fast enough

over centuries to limit the lifespan of civilizations. A rich mix of history, archaeology and geology, *Dirt* traces the role of soil use and abuse in the history of Mesopotamia, Ancient Greece, the Roman Empire, China, European colonialism, Central America, and the American push westward. We see how soil has shaped us and we have shaped soil—as society after society has risen, prospered, and plowed through a natural endowment of fertile dirt. David R. Montgomery

sees in the recent rise of organic and no-till farming the hope for a new agricultural revolution that might help us avoid the fate of previous civilizations.
