Making Choices in Health Elsevier
 There are not enough resources in health care systems around the world to fund all technically feasible and potentially beneficial health care interventions. Difficult choices have to be made, and economic evaluation offers a systematic and transparent process for informing such choices. A key component of economic evaluation is how to value the benefits of health care in a way that permits comparison between health care interventions, such as through costs per quality-adjusted life years (QALY). Measuring and Valuing Health Benefits for Economic Evaluation examines the measurement and valuation of health benefits, reviews the explosion of theoretical and empirical work in the field, and explores an area of research that continues to be a major source of debate. It addresses the key questions in the field including:

the definition of health, the techniques of valuation, who should provide the values, techniques for modelling health state values, the appropriateness of tools in children and vulnerable groups, cross cultural issues, and the problem of choosing the right instrument. This new edition contains updated empirical examples and practical applications, which help to clarify the readers understanding of real world contexts. It features a glossary containing the common terms used by practitioners, and has been updated to cover new measures of health and wellbeing, such as ICECAP, ASCOT and AQOL. It takes into account new research into the social weighting of a QALY, the rising use of ordinal valuation techniques, use of the internet to collect data, and the use of health state utility values in cost effectiveness models. This is an ideal resource for anyone wishing to gain a specialised understanding of health benefit measurement in economic evaluation, especially those working in the fields of health economics, public sector economics, pharmacoeconomics, health services research, public health, and quality of life research.

After years of studying and hard work, you're almost a licensed pharmacist! The final step is passing the North American Pharmacy Licensure Examination, or the NAPLEX®. For the last decade, PharmPrep: ASHP's NAPLEX® Review, has been a trusted resource with new graduates preparing for the NAPLEX examination, both as an online product and a print companion. Using real patient cases accompanied by questions that address all NAPLEX® competency statements, the new fully updated PharmPrep: ASHP's NAPLEX® Review, 4th edition, gives you the flexibility to review information by specific disease state and provides 78 sample cases, as well as calculations and law review sections. As drug therapy becomes more complex, PharmPrep has continued to update and revise cases so they reflect contemporary clinical practice. PharmPrep is an equally

important reference for the experienced practitioner as a tool for pharmacists to continue to develop professionally, or for out of practice professionals looking to refresh their skills. Only PharmPrep has case-based questions and detailed explanations that don't just tell you what answers are right or wrong, but why. It is the most affordable, trusted resource available to prepare for the NAPLEX® exam. As a book or in a convenient online/book package, PharmPrep goes where you go—on the subway, in the break room, to the coffeehouse. Or, just cozy up to the PharmPrep book from the comforts of home. Wherever you go, its the best resource to get you passed and ready to practice. To learn more about PharmPrep Online, visit www.pharmpreponline.com and sign up for a free trial today. Essentials of Pharmacoeconomics Oxford University Press
 Designed as a true introduction to the subject, Essentials of Pharmacoeconomics: Health Economics and Outcomes Research, Third Edition includes information on fundamental topics, defines terminology, and provides examples for evaluating published research, making it perfect for any pharmacy student or practitioner new to the topic. This updated edition provides the critical foundations of knowledge for measuring costs and health-related quality-of-life (HRQoL) and evaluating the four types of studies (CMA, CEA, CUA, and CBA); it also explains Markov and Budget Impact Analysis modeling, and discusses the advantages and disadvantages of using retrospective databases and real-world data (RWD). Additionally, the text summarizes the use of pharmacoeconomic evaluations by decision makers outside of the United States and the extent to which pharmacoeconomic data are used to make decisions in the United States, includes barriers to its use, and discusses future issues. All of this information is designed to ensure preparedness to improve clinical and humanistic outcomes based on available resources.

Introduction to Health Care Delivery American Pharmacists Association (APhA)

Understanding Health Outcomes and Pharmacoeconomics presents an overview of the tools used to assess patient-related health status including associated health outcomes and the analyses that are used to determine cost-effectiveness in evaluating pharmacotherapeutic interventions to improve health. Including data and examples from several different countries, this comprehensive text will help students understand the basis for decisions made at the local and governmental level that impact the use of pharmaceuticals and provide a strong foundation for

understanding the principles used in cost-effective decision making. With commentaries, cases studies, and highlighting international differences, this text concludes with a discussion of the need for a universal system for documenting medication use. Understanding Health Outcomes and Pharmacoeconomics provides definitions of comparative effectiveness research (CER) and comparisons of pharmacoeconomic models (including cost-effectiveness, cost-benefit, and cost utility analyses). This inclusive text provides describes how CER is linked to various pharmacoeconomic models by providing examples from clinical trials with comparative pharmacotherapy and cost parameters. From the Introduction: "The need for interprofessional education was made apparent in the 2003 Health Professions Education: A Bridge to Quality report. All healthcare professionals must be educated to deliver patient-centered care as members of an interprofessional team, emphasizing evidence-based practice, quality improvement approaches, and informatics. An enhanced understanding of pharmacoeconomic principles is a step in the right direction for healthcare practitioners as we do our best to ensure optimal medication therapy outcomes for patients and society at-large." -- George E. MacKinnon III, PhD, RPh, FASHP *Pharmacotherapeutics for Advanced Practice* Jones & Bartlett Publishers

In financially constrained health systems across the world, increasing emphasis is being placed on the ability to demonstrate that health care interventions are not only effective, but also cost-effective. This book deals with decision modelling techniques that can be used to estimate the value for money of various interventions including medical devices, surgical procedures, diagnostic technologies, and pharmaceuticals. Particular emphasis is placed on the importance of the appropriate representation of uncertainty in the evaluative process and the implication this uncertainty has for decision making and the need for future research. This highly practical guide takes the reader through the key principles and approaches of modelling techniques. It begins with the basics of constructing different forms of the model, the population of the model with input parameter estimates, analysis of the results, and progression to the holistic view of models as a valuable tool for informing future research exercises. Case studies and exercises are supported with online templates and solutions. This book will help analysts understand the contribution of decision-analytic modelling to the evaluation of health care programmes. ABOUT THE SERIES: Economic evaluation of health interventions is a growing specialist field, and this series of practical handbooks will tackle, in-depth, topics superficially addressed in more general health economics books. Each volume will include illustrative material, case histories and worked examples to encourage the reader to apply the methods discussed, with supporting material provided online. This series is aimed at health economists in academia, the pharmaceutical industry and the health sector, those on advanced health economics courses, and health researchers in associated fields.

Acupuncture has been practiced for more than 2500 years in the Western Pacific region and has become a global therapeutic method in recent decades. However, it was reported that acupuncturists differed by up to 25% in the acupuncture points they used, raising doubts and uncertainty regarding the efficacy and safety of acupuncture treatment, as well as causing difficulties in the fields of acupuncture research and education. Member States therefore increasingly began to demand standardization in acupuncture point locations. Responding to this request, the WHO Western Pacific Regional Office initiated a project to reach consensus on acupuncture point locations and thus convened 11 serial meetings resulting in these guidelines. This Standard acupuncture point locations in the Western Pacific Region stipulates the methodology for locating acupuncture points on the surface of the human body, as well as the locations of 361 acupuncture points. The Standard is applicable for teaching, research, clinical service, publication, and academic exchanges involving acupuncture.

A Practical Guide to Pharmacoeconomics introduces pharmacoeconomic analysis, so pharmacists can help health care decision-makers, whether they are patients, providers, or payers, choose the best therapies with the most value. This book takes some of the guesswork out of reviewing financial and comparative effectiveness data to help make clinical decisions. Designed for both pharmacists and student pharmacists, this is an excellent beginner's resource to pharmacoeconomics. KEY FEATURES: - Basic concepts of pharmacoeconomics - Introduction to managed care and formulary management - Cost-effectiveness, cost minimization, and cost-benefit analysis - Modeling and decision analysis - Over 40 pharmacoeconomics problems with solutions **Applied Therapeutics** Lippincott Williams & Wilkins Sidman's Neuroanatomy: A Programmed Learning Tool, Second Edition is an innovative combined neuroanatomy text and review that covers the structure of the entire nervous system. Its unique programmed learning approach allows students to easily retain information and learn at their own pace by slowly building on previously learned concepts throughout each chapter. The programmed learning approach introduces new information and reviews previously learned information by presenting it in new contexts, calling attention to important details and illustrating steps in a reasoning process. This learning method adds to and reinforces the student's understanding and retention of neuroanatomical knowledge. This edition features updated illustrations, a systems-based organization, and new concepts on the cerebellum, extrapyramidal pathways, special sensory pathways, diencephalon, ventricular system, and vascular anatomy. Terminology has been updated to conform to Terminologia Anatomica. Accompanying the book is a multimedia component, containing an interactive question bank with fill-in-the-blank and figure labeling exercises, pop-up images, and hot spot identification questions as well as brand-new neuroanatomical animations.
