Cannabis products are the most widely trafficked drugs worldwide, and it also remains the most widely used drug worldwide. At the same time, production methods have become increasingly sophisticated, resulting in the availability in illicit markets of a wide range of cannabis products. This updated and significantly revised manual has been prepared taking into account both developments in analytical technology and advances in the science of cannabis. It is aimed at the harmonization and establishment of recommended methods of analysis for national drug analysis laboratories. The manual suggests approaches that may assist drug analysts in the selection of methods appropriate to the sample under examination and provide data suitable for the purpose at hand, leaving room also for adaptation to the level of sophistication of different laboratories and the various legal needs.

A volume in the Emerging Issues in Analytical Chemistry series, The Analytical Chemistry of Cannabis: Quality Assessment, Assurance, and Regulation of Medicinal Marijuana and Cannabinoid Preparations provides analytical chemistry methods that address the latest issues surrounding cannabis-based products. The plethora of marketed strains of cannabis and cannabinoid-containing products, combined with the lack of industry standards and labelling requirements, adds to the

general perception of poor quality control and limited product oversight. The methods described in this leading-edge volume help to support the manufacturing, labelling, and distribution of safe and consistent products with known chemical content and demonstrated performance characteristics. It treats analytical chemistry within the context of the diverse issues surrounding medicinal and recreational cannabis in a manner designed to foster understanding and rational perspective in non-scientist stakeholders as well as scientists who are concerned with bringing a necessary degree of order to a field now characterized by confusion and contradiction. The Emerging Issues in Analytical Chemistry series is published in partnership with RTI International and edited by Brian F. Thomas. Combine cannabis with your favorite cocktails, mocktails, smoothies, shakes, and teas. My book, Cannabis Infused Drinks, will show you how to decarb cannabis, create marijuana additives, and use CBD and THC to make delicious and healthy drink recipes. My book gives you over 25 unique cannabis drink recipes. Are you looking for an easy high? THC infused smoothies will get you there. Would you like to relieve anxiety and soothe sore muscles? CBD teas can make that happen. I have several recipes any home mixologist will love! In my first book, Cannabis Candy & Dessert Cookbook: Learn to Decarb, Extract and Make Your Own CBD & THC Infused Candy from Scratch, I introduced readers to the world of cannabis edibles. In my new book about cannabis drinkables, I will teach you all about how to easily incorporate cannabis into your daily life. My first experience with weed was terrible. When I was a teen, I fool heartedly experimented with smoking a joint. Now,

several years later, I have expanded my knowledge on the right and fun way to consume cannabis. My preferred way is with cannabis drinkables. You may have heard of cannabis edibles like pot brownies, but have you tried a pot smoothie? What about a cannabis cocktail? My book will show you how it's done. To help you fully benefit from this book, I have divided it into sections. I start by providing very basic information about cannabis. I discourage all my readers from skipping the first sections of the book. It is common for people to skip directly to the recipes without paying much attention to the introductory chapters. It is in your best interest to get everything you need from the book. First, learn about the basic principles that govern the use of cannabis, its benefits, and those who are best suited to use cannabis. From the introductory section of the book, we move to the second section, which introduces us to cannabis extracts. We look at various ways of preparing cannabis extracts. It is important that you extract CBD and THC from the cannabis so that you can use the extracts to prepare your cannabis drinks. The extracts include tincture, oils, and hash oils, among others. Make sure you try out the extraction process before you jump to the recipes. However, you do not have to try out the extraction process if you do not have access to fresh herbs. If you do not grow cannabis and cannot access cannabis fresh buds, it is advisable to buy cannabis extracts such as oils from a legalized dispensary and use it. Once we are done with cannabis extracts, we moved on to preparing some cannabis drink additives. In this section, we look at the additives used in cannabis drinks. It is important to prepare these additives in advance so that when it is time to start preparing your drinks, you have all the additives ready. As you have seen from the book, we only use additives in drink recipes. The main additives we use in creating cannabis drinks include cannabutter, cannabis milk, cannabis oil, and cannabis-infused honey. Once you have finished preparing the additives, start preparing your drinks. Make sure you examine the recipes well so that you get the dosage right. To help you get your doses right, we have provided a detailed guide on the dosage of both CBD and THC. Follow the dosage guide to ensure that you do not end up overdosing on THC. In case of overdose, make sure you take immediate action in regard to the guidelines provided in the book. You will learn everything you need to know to craft delicious and healthy cannabis cocktails, mocktails, smoothies, shakes, teas, and flavored waters. Adding cannabis to your diet can be healthy and beneficial - I will teach you how! Be sure to click "Buy now" to add this title to your collection. This book also makes a great gift for the mixology enthusiast in your life. Cheers!

The author of the game-changing Cannabis Health Index returns with a book designed specifically for general readers who want to understand how THC and CBD can benefit them. While CBD is the new buzzword for health and wellness, many researchers and practitioners believe that the symbiotic relationship between THC and CBD, known as the entourage effect, allows for greater therapeutic benefits for patients. Unfortunately, when it comes to optimizing that ratio to a particular health condition, it is often a process of trial and error for medical patients. Your Cannabis CBD:THC Ratio provides detailed information on how to find the best ratios of CBD:THC and covers the preferred ratios of these two primary cannabinoids for ten prevalent medical conditions—including cancer, chronic pain, anxiety, insomnia, and many others. Blesching's unique

chemotype-based system takes into account CBD:THC ratios, the various forms of cannabis medicine available to consumers, and the subjective therapeutic dosages, presenting a complete evidence-based methodology. -- Uwe Blesching, PH.D.

Because marijuana is a Schedule I drug under the Controlled Substances Act, the therapeutic benefits of cannabis are no longer mentioned in the formal education of health care professionals. Doctors who do learn of the drug's therapeutic value are often intimidated by its illegal status. Thus millions of patients afflicted with such illnesses as glaucoma, AIDS, cancer, multiple sclerosis, spinal cord injuries, seizure disorders and chronic pain are denied access to information about the drug's benefits and, in many cases, suffer needlessly. Straightforward and nonpoliticized information on the therapeutic uses of cannabis is provided here by medical, legal and scientific professionals. Legal issues, a worldwide history of therapeutic cannabis and a discussion of its pharmacology are covered. Specific medical uses are then examined, including its application for sufferers of cancer, AIDS, glaucoma, and seizure disorders, and its potential use in psychiatry. Dosages and administration of cannabis are explored, along with considerations on the use of the drug during pregnancy and the risks of addiction and dependency.

This book highlights current Cannabis research: its botany, authentication, biotechnology, in vitro propagation, chemistry, cannabinoids biosynthesis, metabolomics, genomics, biomass production, quality control, and pharmacology. Cannabis sativa L. (Family: Cannabaceae) is one of the oldest sources of fiber, food and medicine. This plant has been of interest to researchers, general public and media not only due to its medicinal properties but also the controversy surrounding its illicit use. Cannabis has a long history of medicinal use in the Middle East and Asia, being first introduced as a

medicine in Western Europe in the early 19th century. Due to its numerous natural constituents, Cannabis is considered a chemically complex species. It contains a unique class of terpeno-phenolic compounds (cannabinoids or phytocannabinoids), which have been extensively studied since the discovery of the chemical structure of tetrahydrocannabinol ( $\Delta^9$ -THC), commonly known as THC, the main constituent responsible for the plant's psychoactive effects. An additionally important cannabinoid of current interest is Cannabidiol (CBD). There has been a significant interest in CBD and CBD oil (extract of CBD rich Cannabis) over the last few years because of its reported activity as an antiepileptic agent, particularly its potential use in the treatment of intractable epilepsy in children.
