With about 200,000

entries, StarBriefs Plus

represents the most

comprehensive and

accurately validated

collection of

abbreviations, acronyms,

within astronomy, related

space sciences and other

related fields. As such,

this invaluable reference

should be on the

reference shelf of every

interest in these areas.

Besides astronomy and

associated space

sciences, related fields

such as aeronautics,

computer sciences, data

processing, education,

electronics, engineering,

energetics, environment,

geodesy, geophysics,

information handling,

covered when justified.

Terms in common use

This compilation probably

looks like one of the

craziest things a human

being could spend his or

her time on. Yet nobody

would wonder at someone

taking a short walk every

day - after twenty five

years that person would

have covered a

surprisingly long distance.

This is exactly the story

behind this list, which

appeared first as a few

pages within the directory

StarGuides (or whatever

name it had at that time)

and as a distinct sister

publication since 1990.

The idea behind this

dictionary is to offer

astronomers and related

space scientists practical assistance in decoding the numerous abbreviations, acronyms, contractions and symbols which they might encounter in all aspects of the vast range of their professional activities, including traveling. Perhaps it is a bit paradoxical, but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline, they will probably encounter more difficulties when dealing with adjacent fields. It is for this purpose that this dictionary might be most often used. Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions.

With 200,000 entries in over eighty different

fields, Scientific and Technical Acronyms, Symbols, and Abbreviations is the most comprehensive reference of its type, covering more scientific and technical disciplines than any other available book. This invaluable resource will help scientists, engineers, and researchers understand and utilize current terminology in almost any field-from aeronautics to zoology. All accepted abbreviations, acronyms, and symbols are included, from the most obscure to the most common, as well as an appendix that provides important lists of units, systems of units, conversion factors, and prefixes. Science writers, journalists, translators, interpreters-anyone working in or around the sciences-will find this a helpful, easy-to-use guide to difficult technical jargon. Entries are listed in alphabetical order and are defined according to the field in which they are currently in use. Multiple

definitions are listed for abbreviations and acronyms that may be in use in more than one field. For instance, the entry for the abbreviation "cb" would show several meanings: "CB" for Canada Balsam, "Cb" for cerebellum, and "c-B" for crystalline boron, among others. Entries for terms in languages other than English are included, as well as abbreviations for all known scientific and technical journals. Simple, comprehensive, and up-to-date, *Scientific and Technical Acronyms, Symbols, and Abbreviations* is a complete and vital reference for professionals in almost any scientific or technical discipline.
