The NASA/JPL life support systems analysis (LISSA) software tool was used to perform life support system analysis and technology trades for a Lunar Outpost. The life support system was modeled using a chemical process simulation program on a steady-state, one-person, daily basis. Inputs to the LISSA model include metabolic balance load data, hygiene load data, technology selection, process operational assumptions and mission parameter assumptions. A baseline set of technologies has been used against which comparisons have been made by running twenty-two cases with technology substitutions.

Federal Personnel Manual Springer Nature

"This document contains project instructions for EX-17-03. Operations for this cruise will be conducted 24 hours/day and consist of daily remotely operated vehicle (ROV), overnight mapping, possible CTD casts and full shore-based participation via telepresence. Operations will be conducted within several marine protected areas. The expedition will commence on March 7th, 2017 in Apia, Samoa (13°51.03' S, 171°45.08'W) and conclude on March 29, 2017 in Apia, Samoa (13°51.03' S, 171°45.08'W). Operations will include the use of the ship's deep water mapping systems (Kongsberg EM302 multibeam sonar, EK60 split-beam fisheries sonars, Knudsen 3260 chirp sub-bottom profiler sonar, and Teledyne Acoustic Doppler Current Profilers), and XBT casts in support of multibeam sonar mapping operations. OER's 6000 m twobody ROV Deep Discoverer and Seirios, and the ship's high-bandwidth satellite connection for continuous real-time ship-to-shore communications. Operations are planned in Tokelau, Kiribati's Phoenix Islands Protected Area (PIPA), the Howland and Baker unit of the Pacific Remote Islands Marine National Monument (PRIMNM), National Marine Sanctuary of American Samoa, and Samoa"--Page [2].

[Antarctic Bibliography](#) Haynes Publications

Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.

[Governing the Wild](#) University of Toronto Press

Each Haynes Manual is based on a complete teardown and rebuild of the specific vehicle. Features hundreds of "hands-on" photographs taken of specific repair procedures in progress. Includes a full chapter on scheduled owner maintenance and devotes a full chapter to emissions systems. Wiring diagrams are featured throughout.

Annals of the International Geophysical Year, Volume 48: Bibliography and Index contains bibliography of articles published in connection with the International Geophysical Year (IGY). The preparatory and operational phases of the IGY occupied nearly a decade and the data accumulated in the many scientific disciplines by workers in some 67 countries will provide material for publication for many years. The references have been assembled from information supplied by a wide variety of sources. These references have been grouped into 21 sections, of which Sections I-XIV followed the discipline grouping adopted during the IGY. Within each section references have

been arranged in alphabetical order according to the name of the principal author. Anonymous articles are listed at the end of each section, again arranged in alphabetical order by title. In the scientific literature, author's names originally printed in Cyrillic symbols sometimes appear with several different spellings because of the use of different transliteration systems. In the present Bibliography an attempt has been made to achieve consistency by using the same transliteration system throughout. This book will prove useful to geophysicists and researchers who are interested in the accomplishments of the International Geophysical Year.

It was November 1806. The explorers had gone without food for one day, then two. Their leader, not yet thirty, drove on, determined to ascend the great mountain. Waist deep in snow, he reluctantly turned back. But Zebulon Pike had not been defeated. His name remained on the unclimbed peak and new adventures lay ahead of him and his republic. In Citizen Explorer, historian Jared Orsi provides the first modern biography of this soldier and explorer, who rivaled contemporaries Meriwether Lewis and William Clark. Born in 1779, Pike joined the army and served in frontier posts in the Ohio River valley before embarking on a series of astonishing expeditions. He sought the headwaters of the Mississippi and later the sources of the Arkansas and Red Rivers, which led him to Pike's Peak and capture by Spanish forces. Along the way, he met Aaron Burr and General James Wilkinson; Auguste and Pierre Couteau, patriarchs of St. Louis's most powerful fur-trading family, who sought to make themselves indispensable to Jefferson's administration; as well as British fur-traders, Native Americans, and officers of the Spanish empire, all of whom resisted the expansion of the United States. Through Pike's life, Orsi examines how American nationalism thinned as it stretched west, from the Jeffersonian idealism on the Atlantic to a practical, materialist sensibility on the frontier. Surveying and gathering data, Pike sought to incorporate these distant territories into the republic, to overlay the west with the American map grid; yet he became increasingly dependent for survival on people who had no attachment to the nation he served. He eventually died in that service, in a victorious battle in the War of 1812. Written from an environmental perspective, rich in cultural and political context, Citizen Explorer is a state-of-the-art biography of a remarkable man.

An advanced reference documenting, in detail, every step of a real System-in-Package (SiP) design flow. Written by an engineer at the leading edge of SiP design and implementation, this book demonstrates how to design SiPs using Mentor EE Flow. Key topics covered include wire bonding, die stacks, cavity, flip chip and RDL (redistribution layer), Embedded Passive, RF design, concurrent design, Xtreme design, 3D real-time DRC (design rule checking), and SiP manufacture. Extensively illustrated throughout, System in Package Design and Simulation covers an array of issues of vital concern for SiP design and fabrication electronics engineers, as well as SiP users, including: Cavity and sanded dies design FlipChip and RDL design Routing and coppering 3D Real-Time DRC check SiP simulation technology Mentor SiP Design and Simulation Platform Designed to function equally well as a reference, tutorial, and self-study, System in Package Design and Simulation is an indispensable working resource for every SiP designer, especially those who use Mentor design tools.

[Monthly Catalog of United States Government Publications](#) Bloomsbury Publishing
 Analysing three cases of British colonial violence that occurred in the latter half of the 19th century, this book argues that all three share commonalities, including the role of racial prejudices in justifying the perpetration of extreme colonial violence. Exploring the connections and comparisons between the Perak War (1875-76), the 'Hut Tax' Revolt in Sierra Leone (1898-99) and the Anglo-Egyptian War of Reconquest in the Sudan (1896-99), Gordon highlights the significance of decision-making processes, communication between London and the periphery and the influence of individual colonial administrators in outbreaks of violence. This study reveals the ways in which racial prejudices, the advocacy of a British 'civilising mission' and British racial 'superiority' informed colonial administrators' decisions on the ground, as well as the rationalisation of extreme violence.

Responding to a neglect of British colonial atrocities within the historiography of colonial violence, this work demonstrates the ways in which Britain was just as willing and able as other European Empires to resort to extreme measures in the face of indigenous resistance or threats to the British imperial project.

The Guide to Processing Personnel Actions Elsevier

The book is based on results from the Russian expedition in the region of the Antarctic Peninsula and Powell Basin in the northern part of the Weddell Sea, as well as on the review of earlier research in the region. The main goal of the research was to collect the newest data and study the physical properties and ecology of this key region of the Southern Ocean. Data analysis is supplemented with numerical modeling of the atmosphere-ocean interaction and circulation in the adjacent region, including research on rogue waves. The focus of the study was the Antarctic Circumpolar Current, currents and water properties in the Bransfield Strait and Antarctic Sound, properties of seawater, currents, ecosystem and biological communities in the Powell Basin of the northwestern Weddell Sea, and their variations. An attempt is made to reveal the role of various components of the

Antarctic environment in the formation of biological productivity and maintenance of the Antarctic krill population. This is especially important as in the last decades the Antarctic environment has experienced significant changes related to the global climatic trends.
