Excerpt from Practical Electricity: With  
Questions and Answers This book was  
written especially to assist those who  
have some practical knowledge of  
electricity and who wish to learn more of  
the way in which Wiring is calculated and  
of the simpler and more important parts of  
dynamo electric machine design. Some of

the methods used and explanations  
advanced in the book are, so far as the  
writers know, entirely new, and it has all  
been written with the idea of illustrating  
the subject and making it as simple and  
as easy of comprehension as possible. The  
only way to obtain a working knowledge  
of the subject is by careful study. The book  
has been arranged so that those who are  
willing to devote some effort to the work  
can get a clear conception of the more  
important ideas and laws that underlie the  
subject. One who studies the text and  
answers the questions at the end of each

chapter should be able to calculate a  
wiring job for lights or power; to calculate  
the proper size and amount of wire for a  
dynamo when he has the dimensions of  
the machine; to calculate the size and  
Winding for a magnet to give a required  
pull, etc. About the Publisher Forgotten

\*\*This is the chapter slice "Electricity and Magnetism Gr. 1-5" from the full lesson plan "Hands-On - Physical Science"\*\*. Get your students excited about energy and all things that move with our Hands-On Physical Science resource for grades 1-5. Combining Science, Technology, Engineering, Art, and Math, this resource

aligns to the STEAM initiatives and Next Generation Science Standards. Study balanced and unbalanced forces by dropping different objects to measure the effect of gravity and air resistance on them. Measure the distance of lightning by watching and listening for thunder. Get into groups and make models of water, sound and light waves. Experience static electricity first hand by getting a balloon to magically stick to a wall. Describe a solid, liquid and gas around your home by its properties. Make a compound machine with your classmates by combining at least two simple machines. Each concept is paired with hands-on experiments and comprehension activities to ensure your students are engaged and fully understand the concepts. Reading passages, graphic organizers, before you read and assessment activities are included.

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have

endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.
