### The Europeanisation of occupational health services

Frontiers Media SA

Published in association with the European Academy of Occupational Health Psychology (EAOHP) and the Society for Occupational Health Psychology (SOHP), Contemporary Issues in Occupational Health Psychology is a definitive new series presenting state-of-the-art work by leading academics and practitioners in the field. Topics include workplace health intervention evaluation, economic stress and employee well-being, work-family positive spillover, psychological flexibility, and health at work. Contributors to this first volume include Arnold Bakker, Frank Bond, Maureen Dollard, Leslie Hammer, Robert Karasek, Michiel Kompier, Tahira Probst, Wilmar Schaufeli, Arie Shirom, Robert Sinclair, Toon Taris and Töres Theorell.

Workers and their families, employers, and society as a whole benefit when providers deliver the best quality of care to injured

workers and when they know how to provide effective services for both prevention and fitness for duty and understand why, instead of just following regulations. Designed for professionals who deliver, manage, and hold oversight responsibility for occupational health in an organization or in the community, Occupational Health Services guides the busy practitioner and clinic manager in setting up, running, and improving healthcare services for the prevention, diagnosis, treatment, and occupational management of work-related health issues. The text covers: an overview of occupational health care in the US and Canada: how it is organized, who pays for what, how it is regulated, and how workers' compensation works how occupational health services are managed in practice, whether within a company, as a global network, in a hospital or medical group practice, as a free-standing clinic, or following other models management of core services, including recordkeeping, marketing, service delivery options, staff recruitment and evaluation, and program evaluation depth and detail on specific services, including clinical service delivery for injured workers, periodic health surveillance, impairment assessment, fitness for duty, alcohol and drug testing, employee assistance, mental

health, health promotion, emergency management, global health management, and medico-legal services. This highly focused and relevant combined handbook and textbook is aimed at improving the provision of care and health protection for workers and will be of use to both managers and health practitioners from a range of backgrounds, including but not limited to medicine, nursing, health services administration, and physical therapy.

Much has been written about the care of research animals. Yet little guidance has appeared on protecting the health and safety of the people who care for or use these animals. This book, an implementation handbook and companion to *Guide For the Care and Use of Laboratory Animals*, identifies principles for building a program and discusses the accountability of institutional leaders, managers, and employees for a program's success. It provides a detailed description of risks-- physical and chemical hazards, allergens and zoonoses, and hazards from experiments--which will serve as a continuing reference for the laboratory. The book offers specific recommendations for controlling risk through administrative procedures, facility design, engineering controls, and periodic evaluations. The volume focuses on the worker, with detailed discussions of work practices, the use of personal protective gear, and the development of an emergency response plan. This handbook will be invaluable to administrators, researchers, and employees in any animal research facility. It will also be of interest to personnel in zoos, animal shelters, and veterinary facilities.

Global Occupational Health is a concise, complete introduction to a vital-but often neglected-area in the field of health sciences. Work-related illnesses and injuries are critical concerns for every country and at every stage of economic development and an important determinant of health and financial security for working adults and their families. As a comprehensive textbook designed for students, professionals in public health, and occupational health practitioners who are working across international boundaries, this book will provide the reader with solid foundational knowledge of occupational health through the lens of economic development. Perfect for use as both a stand-alone text or as supplementary reading, this book addresses worker protection and the management of occupational health from rich industrialized countries to developing societies. The first section of the book concentrates on broad approaches and

frameworks for the investigation and management of health in the workplace. The second section addresses important hazards. The third section addresses specific industry sectors, management challenges, and policies at the global level. Each chapter links occupational health to economic development concepts and future trends. The contributed chapters are authored by international experts in the field, enriched by boxed case studies and supportive concrete examples. This work sets a new standard for education in occupational health.

A Prefeasibility Study National Academies Press

The field of occupational health and safety constantly changes, especially as it pertains to biomedical research. New infectious hazards are of particular importance at nonhuman-primate facilities. For example, the discovery that B virus can be transmitted via a splash on a mucous membrane raises new concerns that must be addressed, as does the discovery of the Reston strain of Ebola virus in import quarantine facilities in the U.S. The risk of such infectious hazards is best managed through a flexible and comprehensive Occupational Health and Safety Program (OHSP) that can identify and mitigate potential hazards. *Occupational Health and Safety in the Care and Use of Nonhuman Primates* is intended as a reference for vivarium managers, veterinarians, researchers, safety professionals, and others who are involved in developing or implementing an OHSP that deals with nonhuman primates. The book lists the important features of an OHSP and provides the tools necessary for informed decision-making in developing an optimal program that meets all particular institutional needs.
