Stories give life and

substance to scientific

methods and provide an

inside look at scientists in

action. Case studies

deepen scientific

understanding, sharpen

critical-thinking skills, and

help students see how

science relates to their

lives. In Science Stories,

Clyde Freeman Herreid,

Nancy Schiller, and Ky

Herreid have organized

case studies into

categories such as

historical cases, science

and the media, and ethics

and the scientific process.

Each case study

comprises a story,

classroom discussion

questions, teaching notes

and background

information, objectives,

and common

misconceptions about the

topic, as well as helpful

references. College-level

educators and high school

teachers will find that this

compilation of case

studies will allow students

born out of a 2014

meeting of earth science

educators representing

most of the universities

and colleges in British

Columbia, and nurtured

by a widely shared

frustration that many

students are not thriving

in courses because

textbooks have become

too expensive for them to

buy. But the real

inspiration comes from a

fascination for the

spectacular geology of

western Canada and the

many decades that the

author spent exploring

this region along with

colleagues, students,

family, and friends. My goal has been to provide an accessible and comprehensive guide to the important topics of geology, richly illustrated with examples from western Canada. Although this text is intended to complement a typical first-year course in physical geology, its contents could be applied to numerous other related courses.

Concepts of Earth and Chemistry Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your

student; materials for each semester are independent of one another to allow flexibility. Semester 1: Earth Blending a creationism perspective of history with definitions of terms and identification of famous explorers, scientists, etc., this book gives students an excellent initial knowledge of people and places, encouraging them to continue their studies in-depth. Semester 2: Chemistry Chemistry is an amazing branch of science that affects us every day, yet few people realize it, or even give it much thought. Without chemistry, there would be nothing made of plastic, there would be no rubber tires, no tin cans, no televisions, no microwave ovens, or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries, and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument.

Exploring the World of Chemistry brings science to life and is a wonderful learning tool with many illustrations and biographical information. *5 Steps to a 5 500 AP Environmental Science Questions to Know by Test Day* New Leaf Publishing Group
