Since the Tarot is really a product of the Italian Renaissance, it is only appropriate that a Tarot deck be based on the genius of the quintessential Renaissance man: Leonardo Da Vinci. The art is sophisticated in line, color, composition, and

symbolism. Prepare to be intrigued, challenged, and delighted as you explore the depth and beauty of this deck.

Tired, stressed, and in need of more help from your partner? Imagine running your household (and life!) in a new way... It started with the Sh*t I Do List. Tired of being the "shefault" parent

responsible for all aspects of her busy household, Eve Rodsky counted up all the unpaid, invisible work she was doing for her family--and then sent that list to her husband, asking for things to change. His response was...underwhelming. Rodsky realized that simply identifying the issue of unequal labor on the home front wasn't enough: She needed a solution to this universal problem. Her sanity, identity, career, and marriage depended on it. The result is *Fair Play*: a

time- and anxiety-saving system that offers couples a completely new way to divvy up domestic responsibilities. Rodsky interviewed more than five hundred men and women from all walks of life to figure out what the invisible work in a family actually entails and how to get it all done efficiently. With 4 easy-to-follow rules, 100 household tasks, and a series of conversation starters for you and your partner, Fair Play helps you prioritize what's important to your family

and who should take the lead on every chore, from laundry to homework to dinner. "Winning" this game means rebalancing your home life, reigniting your relationship with your significant other, and reclaiming your Unicorn Space--the time to develop the skills and passions that keep you interested and interesting. Stop drowning in to-dos and lose some of that invisible workload that's pulling you down. Are you ready to try Fair Play? Let's deal you in.

Evolutionary Neuroscience, Second Edition, is a collection of chapters on brain evolution that combines selected topics from the recent comprehensive reference, Evolution of Nervous Systems (Elsevier, Academic Press, 2017, 9780128040423). The selected chapters cover a broad range of topics, from historical theory, to the most recent deductions from comparative studies of brains. The articles are organized in sections

focused on history, concepts and theory, the evolution of brains from early vertebrates to present-day fishes, amphibians, reptiles and birds, the evolution of mammalian brains, and the evolution of primate brains, including human brains. Each chapter is written by a leader or leaders in the field. Specific topics include brain character reconstruction, principles of brain scaling, basic features of vertebrate brains, the evolution of the major sensory

systems, other parts of brains, what we can learn from fossils, the origin of neocortex, and the evolution of specializations of human brains. The collection of articles will be interesting to anyone who is curious about how brains evolved from the simpler nervous systems of the first vertebrates into the many different complex forms now found in present-day vertebrates. This is the digital copy of the printed book (Copyright © 2001). With detailed scenarios, imaginative illustrations,

and step-by-step instructions, consultant and speaker Norman L. Kerth guides readers through productive, empowering retrospectives of project performance. Whether your shop calls them postmortems or postpartums or something else, project retrospectives offer organizations a formal method for preserving the valuable lessons learned from the successes and failures of every project. These lessons and the changes identified by the

community will foster stronger teams and savings on subsequent efforts. For a retrospective to be effective and successful, though, it needs to be safe. Kerth shows facilitators and participants how to defeat the fear of retribution and establish an air of mutual trust. One tool is Kerth's Prime Directive: Regardless of what we discover, we must understand and truly believe that everyone did the best job he or she could, given what was known at the time, his or

her skills and abilities, the resources available, and the situation at hand.

Applying years of experience as a project retrospective facilitator for software organizations, Kerth reveals his secrets for managing the sensitive, often emotionally charged issues that arise as teams relive and learn from each project.

Once inside, he opened his safe and proceeded to shred each page of his notes on the mutated form of the AIDS virus, which he had been

working on for all those years. Then he destroyed all but a syringe full of the microorganism, which he then proceeded to inject into himself through his thigh. A contented feeling passed through his body, as the beginning of his plan advanced without a hassle. Imagine a world where the AIDS virus mutates into a more deadly form that becomes communicable by touch and leaves those it doesn't kill sterile. The top scientists in the world are baffled-and they can't stop it. This nightmarish

scenario becomes reality in the year 2241. The remnants of the biological catastrophe caused by FS Syndrome have created a world where any type of intimacy is strictly prohibited. It is here that Susan 170 and Bob 162, two very different people, fall in love with each other. Follow their saga as they attempt the unthinkable possibility of a physical relationship and as they are pursued by two ruthless, unrelenting police officers out to protect society by destroying them. This is the digital version of the printed book (Copyright © 2002). The success of systems or software development depends on effective communication. But have you ever had trouble articulating a complex

concept? Have you ever doubted that someone truly understood you—or that you completely received someone’s message? Managers and technical professionals have to communicate effectively in order to understand client requirements, build work-related relationships, meet market demands, and survive time pressures. So often, though, communication breaks down, and nothing gets done (or done well, at least). Thankfully, Naomi Karten—author of

Managing Expectations—is here to help. Readers learn how to improve the way they handle a wide variety of communication conflicts, from one-on-one squabbles to interdepartmental chaos to misinterpretations between providers and customers. Drawing on a variety of recognizable experiences and on useful models for understanding personalities, such as the Myers-Briggs Type Indicator and the teachings of family therapist Virginia Satir, Karten provides a series

of powerful tools and concepts for resolving communication problems—as well as methods for preventing them in the first place. Inadequate communications include misunderstood or missed messages, contradictory or mixed messages, and messages that are intentionally sabotaged. As the author notes, these miscommunications “can have a damaging, puzzling, and counterproductive impact on projects and relationships.” Karten

helps readers identify many of the common factors that can cause communication gaps. For example, mistaken assumptions of understanding lack of follow-up unfixed project terminology emotional baggage personality conflicts mismatched communication preferences Karten's witty, conversational tone makes this book easy to read; her real-life stories and examples make it easy to understand; and her use of hilarious cartoons by Mark Tatro

brings her lessons to life. *Communication Gaps and How to Close Them* is a must-read for anyone who recognizes that the way he or she communicates in professional encounters, as well as in personal ones, can be improved. With Karten's useful insights and practical techniques, this book will change not only how you communicate but also how you think about communication.

This lush book of

photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals-especially those that are endangered. His powerful message, conveyed with humor, compassion, and art- to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create

studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits- from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the eloquent prose of veteran wildlife writer Douglas Chadwick, this book presents a thought-provoking

argument for saving all the species of our planet.
