Primary Care Geriatrics
Demos Medical Publishing
"Authors Jennifer
Bottomley and Carole
Lewis have compiled the
plethora of available

scientific research on
geriatric populations and
combined it with their
years of actual clinical
practice. Together this
makes A Clinical Approach
to Geriatric Rehabilitation,
Fourth Edition a complete
evidence-based guide to
the clinical care of
geriatric patients and
clients. The first part of
this text tackles applied

gerontological concepts,
providing the general
knowledge base
necessary for treating
geriatric patients. Topics
in this section include
patient evaluation, an
exploration of nutritional
needs, and age-related
changes in physiology and
function, as well as many
other foundational areas.
In the second section,

topics become more focused on patient care concepts like neurologic considerations, cardiopulmonary and cardiovascular considerations, and establishing community-based screening programs. In the final section, chapters center on administration and management, including important subjects such as attitudes, ethics, and legal topics, as well as consultation and research. Designed to provide valuable, real-life clinical knowledge in the practice

of geriatric rehabilitation, *A Clinical Approach to Geriatric Rehabilitation, Fourth Edition* gives physical therapists an evidence-based guide to the clinical aspects of rehabilitative care in older adult patients and clients"--
[A Comprehensive Guide to Geriatric Rehabilitation](#)
 Taylor & Francis
 Designed for the busy practitioner, *Geriatrics* presents 97 alphabetically arranged topics covering all major concerns in geriatric rehabilitation ranging from age-related

changes to end-of-life care. The first section reviews topics related to normal aging and assessment methods to measure systemic changes. The second section addresses common aging-associated diseases and disorders affecting relevant organ systems, including neurologic, musculoskeletal, rheumatologic, and cardiovascular problems and other key concerns such as functional decline, incontinence, and visual impairments. The last

section highlights special considerations such as aging with a developmental disability, exercise, pain management, polypharmacy, and rehabilitation in various healthcare settings. Taken together, the book catalogs the broad range of functional issues endemic in the elderly population and offers a quick reference guide for rehabilitation professionals providing high-quality clinical care to older patients. Every entry is standardized for

quick look-up in the office or clinic, and features description, etiology, risk factors, clinical features, natural history, diagnosis, red flags, treatment, prognosis, helpful hints, and suggested readings. All Rehabilitation Medicine Quick Reference Titles Offer: Consistent Approach and Organization: at-a-glance outline format allows readers to find the facts quickly Concise Coverage: of must-know information broken down into easy-to-locate topics Fast Answers to Clinical Questions:

diagnostic and management criteria for problems commonly encountered in daily practice Hands-on Practical Guidance: for all types of interventions and therapies Multi-Specialty Perspective: ensures that issues of relevance to all rehabilitation team members are addressed Rehabilitation Nursing Cram101 Geriatric Physical Therapy offers a comprehensive presentation of geriatric physical therapy science and practice. Thoroughly revised and updated,

editors Andrew Guccione, Rita Wong, and Dale Avers and their contributors provide current information on aging-related changes in function, the impact of these changes on patient examination and evaluation, and intervention approaches that maximize optimal aging. Chapters emphasize evidence-based content that clinicians can use throughout the patient management process. Six new chapters include: Exercise Prescription,

Older Adults and Their Families, Impaired Joint Mobility, Impaired Motor Control, Home-based Service Delivery, and Hospice and End of Life. Clinically accurate and relevant while at the same time exploring theory and rationale for evidence-based practice, it's perfect for students and practicing clinicians. It's also an excellent study aid for the Geriatric Physical Therapy Specialization exam. Comprehensive coverage provides all the foundational knowledge

needed for effective management of geriatric disorders. Content is written and reviewed by leading experts in the field to ensure information is authoritative, comprehensive, current, and clinically accurate. A highly readable writing style and consistent organization make it easy to understand difficult concepts. Tables and boxes organize and summarize important information and highlight key points for quick reference. A well-referenced and scientific

approach provides the depth to understand processes and procedures. Theory mixed with real case examples show how concepts apply to practice and help you enhance clinical decision-making skills. Standard APTA terminology familiarizes you with terms used in practice. A new chapter, Exercise Prescription, highlights evidence-based exercise prescription and the role of physical activity and exercise on the aging process. A new chapter, Older Adults and Their

Families, helps physical therapists understand the role spouses/partners and adult children can play in rehabilitation, from providing emotional support to assisting with exercise programs and other daily living activities. New chapters on Impaired Joint Mobility, Impaired Motor Control, Home-based Service Delivery, and Hospice and End of Life expand coverage of established and emerging topics in physical therapy. Incorporates two conceptual models: the

Guide to Physical Therapist Practice, 2nd Edition, and the International Classification of Function, Disability, and Health (ICF) of the World Health Organization (WHO) with an emphasis on enabling function and enhancing participation rather than concentrating on dysfunction and disability A companion Evolve website includes all references linked to MEDLINE as well as helpful links to other relevant websites. *Geriatric Rehabilitation* Springer Nature

A Comprehensive Guide to Rehabilitation of the Older Patient E-Book Jones & Bartlett Learning

Geriatric Notes is an essential quick reference for the advanced practice provider (APP) who provides care to elders in the outpatient setting, such as nursing homes, family practice, or home

health. With a practical, accessible, and concise approach, it offers an easy to understand overview of the most common diagnoses, topics, and symptoms encountered in the aging population. Designed to offer access to the basics, this guide provides tables and bullet points for easy reference. Sections include health promotion, neurology and psychiatry, cardiovascular, pulmonary, gastroenterology, genitourinary, rheumatology,

dermatology, endocrinology, labs, Beers list, and common presentations.

Studyguide for Geriatric Rehabilitation Jones & Bartlett Publishers

Geriatric Rehabilitation addresses the fact that this is an age in which individuals have increasing longevity, better health care, education and expectations of health care which present new, increasing and even radical challenges to health care providers. The care of our older patients

in rehabilitation settings demands the broad understanding of the key differences in strategies to care for older adults. The combined skills embraced in rehabilitation and geriatrics are presenting unprecedented opportunities for both fields to make substantive and even ground-breaking improvements in the lives of millions of older adults who entrust their lives to us. Rarely in one's medical career are such opportunities so evident and achievable. Geriatric Rehabilitation edited by

Dr. K. Rao Poduri, MD. FAAPMR draws on a distinguished group of authors who are the front-line providers of care to the older adults. This book presents the full spectrum of the unique care needs of older patients who need the combined skills of physical medicine and geriatrics. It provides an easily accessible means of acquiring and improving these new skills for all those involved in geriatric care.

Guccione's Geriatric Physical Therapy E-Book Psychology Press

"This completely updated third edition of Geriatric Rehabilitation provides a comprehensive look at the specific needs of elderly patients and the practical components of their rehabilitation. The new reader-friendly format and improved illustrations enhance the overall learning experience and help to clearly convey the essential theoretical and clinical points."--BOOK JACKET.

[Documentation for Physical Therapist Practice](#) Elsevier Health Sciences

This book clearly explains when and how different rehabilitation techniques should be applied in the aging patient, thereby enabling readers to identify and apply those rehabilitation strategies that will maximize quality of life and functional independence in individual cases. It is specifically designed for ease of consultation and rapid retrieval of the information most relevant to clinical practice. Prominence is given to the benefits of a multidisciplinary approach

to rehabilitation, with discussion of a very wide range of aspects of rehabilitation in different disease settings. The breadth of coverage is illustrated by the attention paid to less commonly addressed topics such as visual and hearing rehabilitation, the role of robotics and 3D imaging techniques, variations in approach among health care systems, and rehabilitation in end-of-life care. The authors are international academic experts in their fields,

guaranteeing a high scientific standard throughout. This manual will be an invaluable tool and source of knowledge for geriatricians and physiatrists but will also appeal to a wider range of clinicians, practitioners, and students.

The definitive case-based guide to effectively managing geriatric disorders Geriatric Physical Therapy provides the most authoritative overview available on managing the special needs of the elderly in all health care settings. Through nearly 200 cases, the text offers a skill-building balance of theory and clinical application of knowledge in caring for the older adult population. This timely book addresses and incorporates aspects of prevention, fitness, and

wellness into the rehabilitative model of care for elders with and without pathological conditions. Features: Nearly 200 cases examine both acute and chronic stage settings, and provides suggested tests and measures Cases focus on orthopedics and neurology for consistency with board exams, which concentrate in these therapeutic areas Tables and boxes organize and summarize important information and highlight key points for quick reference A well-

referenced and scientific approach provides the depth to understand integral processes and procedures **Aging** Prentice Hall As the population of older adults in the U.S. continues to grow, medical house calls are increasingly part of a system of comprehensive home-based care for patients who have difficulty accessing office-based care. Clinicians who have been trained mostly in office and hospital settings must adapt their usual

approaches to accommodate a wide range of environmental, social, and physical circumstances that impact home-limited patients. Ideally, a comprehensive team of clinicians proficient in multiple domains of functional, social, and medical care can work together to address potential gaps in any one clinician's expertise. Unfortunately, such teams are still rare. This book aims to equip individual clinicians with the interdisciplinary knowledge, skills, and

perspective they need to provide the best care possible with limited formal interdisciplinary support. This book offers 20 patient cases drawn from the collective experience of experts in home-based medical care from highly respected academic and clinical programs across the United States. Each case demonstrates a scenario that is frequently encountered and/or very important in home-based medical care practice. Each scenario frequently proves to be challenging

for many professionals because it requires an approach or leverages aspects of care delivery that most are not trained in. Additionally, each scenario reflects an approach to care that is enhanced by interdisciplinary input. Finally, each case lends itself to a practical problem-solving approach that could be accomplished by most home-based medical care providers, even in the absence of an interdisciplinary team. Written by

interdisciplinary experts in geriatric home-based care, this book serves as both an educational tool for learners in all related disciplines as well as a quick reference for experienced clinicians looking to augment their existing house call “toolbox.”

Geriatric Physical

Therapy Elsevier Health Sciences

People are living longer and the population over the age of 60 is burgeoning, with repercussions for health services and healthcare

expenditure in developed countries. Crucially, disease aetiology, diagnosis, and treatment in older people differ from the general adult population. Older people often have complicated co-morbidities and respond to treatment in different ways compared to younger people.

Evidence of efficacy of different treatments is often lacking because older people are under-represented in clinical trials, and the specific needs of older people are rarely discussed

specifically in more general texts. Geriatric medicine: an evidence based approach is a clinical reference for health care professionals who manage older patients, and summarizes up-to-date research literature in a style that can be directly applied by busy healthcare professionals and provide a useful resource for reference.

Accompanying CD-ROM contains video learning modules on gait and

balance and dizziness, a dermatology quiz, and downloadable cognitive assessment tools, to hone clinical skills. File formats include QuickTime movies, PDFs, and HTML documents.

Promoting Health and Wellness in the Geriatric Patient, An Issue of Physical Medicine and Rehabilitation Clinics of North America, E-Book
F.A. Davis

As the population of aged people increases throughout the world, the need for comprehensive, integrated geriatric care is

rapidly becoming a high priority. Developed from an education program in clinical geriatrics offered through the Division on Aging of the Harvard Medical School, this authoritative text provides broad, interdisciplinary coverage of geriatric health care. The book incorporates the theory and skill needed for many disciplines to work together effectively. It integrates the various topics covered by way of section introductions, cross-references within chapters, a case study

and case conference, and an introductory chapter of discussions among a panel of aged people. With contributions from a wide range of experts, this book teaches an interdisciplinary perspective on the aged and their health care, and examines the working relationships among the many professionals providing care for the aged. *Geriatric Rehabilitation* Elsevier Health Sciences Rehabilitation of the geriatric patient poses a unique set of challenges

and conditions often not seen in younger patients, but which are common among older adults. This quick, practical resource helps physiatrists and other members of the rehabilitation team overcome these challenges, covering the wide range of topics necessary to provide the highest level of care to this rapidly increasing population. Presents practical guidance on arthritis and joint replacement, polypharmacy and mobility, swallowing

dysfunction, nutritional recommendations, psychiatric and cognitive disorders, assistive technology, and more. Covers the physiologic changes and epidemiology of aging, osteoporosis and fragility fractures, fall prevention and intervention, and prevention of hospital-acquired deconditioning. Consolidates today's available information on geriatric rehabilitation into one convenient resource.
Ageing, the Health Care Challenge Taylor &

Francis
Offering a comprehensive look at physical therapy science and practice, Guccione's Geriatric Physical Therapy, 4th Edition is a perfect resource for both students and practitioners alike. Year after year, this text is recommended as the primary preparatory resource for the Geriatric Physical Therapy Specialization exam. And this new fourth edition only gets better. Content is thoroughly revised to keep you up to date on the latest geriatric

physical therapy protocols and conditions. Five new chapters are added to this edition to help you learn how to better manage common orthopedic, cardiopulmonary, and neurologic conditions; become familiar with functional outcomes and assessments; and better understand the psychosocial aspects of aging. In all, you can rely on Guccione's Geriatric Physical Therapy to help you effectively care for today's aging patient population. Comprehensive coverage

of geriatric physical therapy prepares students and clinicians to provide thoughtful, evidence-based care for aging patients. Combination of foundational knowledge and clinically relevant information provides a meaningful background in how to effectively manage geriatric disorders. Updated information reflects the most recent and relevant information on the Geriatric Clinical Specialty Exam. Standard APTA terminology prepares students for terms they will hear in

practice. Expert authorship ensures all information is authoritative, current, and clinically accurate. NEW! Thoroughly revised and updated content across all chapters keeps students up to date with the latest geriatric physical therapy protocols and conditions. NEW! References located at the end of each chapter point students toward credible external sources for further information. NEW! Treatment chapters guide students in managing common conditions in orthopedics,

cardiopulmonary, and neurology. NEW! Chapter on functional outcomes and assessment lists relevant scores for the most frequently used tests. NEW! Chapter on psychosocial aspects of aging provides a well-rounded view of the social and mental conditions commonly affecting geriatric patients. NEW! Chapter on frailty covers a wide variety of interventions to optimize treatment. NEW! Enhanced eBook version is included with print purchase, allowing

students to access all of the text, figures, and references from the book on a variety of devices. Geriatric Rehabilitation Manual Routledge Employing a unique case-based approach, Ham's Primary Care Geriatrics continues to be your comprehensive source of clinical solutions for this challenging population. This gerontology medical reference book features an interdisciplinary perspective that empowers you with team-oriented knowledge on the best diagnosis,

treatment, and management strategies available to address the complex needs of older adults."Overall this is a useful, well written, practical elderly medicine book, ideal for use in primary care. It is reasonable priced and an excellent addition to the bookshelf, virtual or real".Reviewed by: Dr Harry Brown, July 2014 Effectively treat your geriatric patients, and provide helpful guidance to their families, through engaging geriatric case studies that illustrate the

principles and key clinical information you need. Form a definitive diagnosis and create the best treatment plans possible using the evidence-based medicine guidelines throughout. Find the information you need quickly and efficiently with a 2-color layout and consistent format, and test your knowledge with USMLE-style questions in every chapter. Offer your geriatric patients the most up-to-date treatment options available with six new chapters addressing

Principles of Primary Care of Older Adults, Interprofessional Team Care, Billing and Coding, Frailty, Pressure Ulcers, and Anemia. Access the complete geriatric text online anytime, anywhere at Expert Consult, along with an online Cognitive Status Assessment with four tests and patient teaching guides, a dermatology quiz, and informative videos on Gait and Balance and Dizziness. *Community Programs for the Depressed Elderly* Elsevier Health Sciences

Never HIGHLIGHT a Book Again! Virtually all of the testable terms, concepts, persons, places, and events from the textbook are included. Accompanys: 9780131708266 . **Fundamentals of Geriatric Medicine** McGraw-Hill Medical Publishing

Now in its third edition, this trusted clinical guide enables both the busy practitioner and student to review or to learn about a range of pathologies, conditions, examinations, diagnostic procedures, and interventions that can be effectively used in the physical rehabilitation of older people. It presents a broad overview of age-related physiological changes as well as specific professional discipline perspectives. Organized into eleven distinct and interrelated

units, the first unit begins with key anatomical and physiological considerations seen with aging which have significant impact on the older person. The second and third units go on to review important aging-related conditions and disorders of the musculoskeletal and neuromuscular/neurological systems respectively. Neoplasms commonly encountered in older people are the focus of the fourth unit; while aging-related conditions of the cardiovascular,

pulmonary, integumentary and sensory systems are presented in units five through seven. Unit eight highlights a range of specific clinical problems and conditions commonly encountered with older patients. Critically, all of these units emphasize important examination and diagnostic procedures needed for a thorough evaluation and stress interventions that can be of significant benefit to the older patient. The ninth unit presents select physical therapeutic

interventions that are especially important in managing rehabilitative care. Key societal issues related to aging are discussed in the tenth unit. Finally, the concluding eleventh unit focuses on the successful rehabilitation team that includes both professional and non-professional caregiver members. A trusted guide to the conditions and problems faced when evaluating and treating geriatric patients Extensive coverage over 84 chapters, each written by

an expert in the field Includes imaging, vision and the aging ear Cross-referenced - providing the complexity and inter-relatedness of co-morbidities common to aging patients Collaborative international perspective Chapters on the aging spine; frailty; safe pilates for bone health; health care for older people Additional renowned editor - Ronald W. Scott Revised title to reflect the comprehensive scope of content covered (previously entitled Geriatric Rehabilitation

Manual)
Prosthetics and Patient Management Oxford University Press
 This book distills the wealth of knowledge contained in the classic text, Geriatric Medicine: An Evidence-Based Approach, 4/e into a practical guide for primary care, family medicine, and internal medicine residents. Written by top experts in the field, the book offers a detailed, compact overview of geriatric care. It addresses geriatric pharmacology, Medicare

and Medicaid, and numerous other subjects unique to older adults. The case-based instructional approach helps readers navigate the complexity of prevention, presentation, and treatment for conditions such as depression, dementia, and hypertension. Graphs and tables aid the reader in determining the proper courses of treatment. *Orthogeriatrics* Elsevier Health Sciences
This book discusses the state of the research and cutting-edge practice with

regard to chronic illnesses and rehabilitation in older adults. It emphasizes biopsychosocial and culturally appropriate rehabilitation approaches to reduce the degree of disability and maximize independence in the activities of daily living among the burgeoning aging population. Organized in four sections—Introduction and Overview, Major Illnesses and Problems in Aging Populations, Evaluation of Functional Rehabilitation Approaches for Aging Populations, and

Future Clinical Research Needs—the book includes chapters on the “graying” of the West with implications for increased chronic illnesses and disabilities; a review of biopsychosocial rehabilitation approaches; important “aging” issues such as slips-and-falls, musculoskeletal pain, chronic disabling conditions such as cancer and cardiovascular disease, and work-related factors to maintain work engagement in older workers. The US Census Bureau projects that by

the year 2030, about 20% of the U.S. population will be 65 or older, contributing to the increased concern about healthcare and rehabilitation issues

among older adults. /div
This work will be of interest to healthcare, rehabilitation, vocational, human resource and disability management

professionals, policy makers as well as researchers in areas of aging, gerontology, chronic illness, disability, rehabilitation, social work, medicine and psychology.
