Communications Using SIP

SIP is typically used as the application-level signaling protocol in that remit, and therefore its role is crucial. SIP can be used to enable communications based on various media, such as voice communication, video communication, instant messaging communication, interactive online exchange of typically short messages, and text over IP.

Internet Communications

ns Using Sip: Delivering Voip and ... Internet Multimedia Communications Using Sip
 The Session Initiation Protocol is a signaling protocol used for initiating, maintaining, and terminating real-time sessions that include voice, video and messaging applications. SIP is used for signaling and controlling multimedia communication sessions in applications of Internet telephony for voice and

video calls, in private IP telephone systems, in instant messaging over Internet Protocol networks as well as mobile phone calling over LTE. The protocol defines the specific format of messages
