Human Anatomy and Physiology for Biomedical Students
Nova Science Publishers

Reviewing cutting-edge debates around racial politics and the culture and economy of globalization, this book draws together a wide range of important contemporary debates in a clear and concise way for undergraduate students. Far from concluding that racism is over, the authors contend that the forces of globalization inhabit older cultures of racial division in order to safeguard the economic interests of the privileged. Arguing that the unspoken culture of whiteness informs much that passes in the name of globalization, the book suggests that we are witnessing a reformulation of economic relations around global racisms. Alongside these shifts in economic relations, racialized identities evolve to encompass mixed heritages and mixed cultures both in personal identities and in lifestyle choices. This is one of the few texts that concentrates on the theory of race rather than politics. It looks at race in global terms, and at 'whiteness' as a part of ethnic studies.

This volume is the newest release in the authoritative series of quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. Dietary Reference Intakes (DRIs) is the newest framework for an expanded approach developed by U.S. and Canadian scientists. This book discusses in detail the role of vitamin C, vitamin E, selenium, and the carotenoids in human physiology and health. For each nutrient the committee presents what is known about how it functions in the human body, which factors may affect how it works, and how the nutrient may be related to chronic disease. Dietary Reference Intakes provides reference intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for different groups based on age and gender, along with a new reference intake, the Tolerable Upper Intake

Level (UL), designed to assist an individual in knowing how much is "too much" of a nutrient.
