Make your home safer! Version 1.3, updated January 17, 2022

Learn everything you need to know about home security cameras to plan, purchase, and install the best system for your needs for live access, security monitoring, privacy concerns, and affordability. In *Take Control of Home Security Cameras*, networking and security expert Glenn Fleishman shows you how to make smart choices about buying and configuring cameras that take into account technical details, video quality, system integration, your own privacy and that of others, and internet security. As you read this book, you'll:

- Figure out which features are right for you
- Configure your system securely to ensure that

you and people you authorize are the only ones with access to live and stored video

- Find out how to build a system entirely offline, in which no video or live streams make their way to the internet at all
- Understand the different kinds of cloud-based storage of video, and which you might be comfortable with
- Learn about Apple HomeKit Secure Video, a new option available for iPhone and iPad users and certain camera systems (including Logitech Circle 2 and Eufy cameras) that provides the highest level of privacy currently available in cloud storage
- Get to know features found in home security cameras, and how they affect the quality and nature of video you capture
- Set your system so that alerts only appear for the kinds of motion, sound, or other triggers that meet your threshold
- Avoid becoming part of the surveillance state—or opt into a limited and controlled part of it with a fuller understanding of what that means
- Learn about the legal aspects and limits of recording audio and video, and how

they might (or might not) help catch criminals • Get in-depth insight into over 10 of the most popular home security video cameras and systems, including Amazon Blink and Ring, Eufy, Google Nest, NETGEAR Arlo, Logitech Circle, Wyze, and several others • Figure out whether you want a multi-camera system that records video on your network or smart cameras that stream events or continuous video to the internet

The sheer quantity of widely diverse data which now results from multiple sources presents a problem for decision-makers and analysts, who are finding it impossible to cope with the ever-increasing flow of material. This has potentially serious consequences for the quality of decisions and operational processes in areas such as counterterrorism and security. This book presents the papers delivered at the NATO Advanced Research Workshop (ARW) 'Meeting Security Challenges through Data Analytics and Decision Support', held in Aghveran, Armenia, in June 2015. The aim of the conference was to promote and enhance cooperation and dialogue between NATO and Partner countries on the subject of effective decision support for security applications. The attendance of many leading scientists from a variety of backgrounds and disciplines provided the opportunity to improve mutual understanding, as well as cognizance of the specific requirements and issues of Cyber Physical Social Systems (CPPS) and the technical advances pertinent to all collaborative human-centric information support systems in a variety of applications. The book is divided into 3 sections: counter terrorism: methodology and applications; maritime and border security; and cyber security, and will be of interest to all

those involved in decision-making processes based on the analysis of big data.

Symmetry-adapted machine learning has shown encouraging ability to mitigate the security risks in information and communication technology (ICT) systems. It is a subset of artificial intelligence (AI) that relies on the principles of processing future events by learning past events or historical

data. The autonomous nature of symmetry-adapted machine learning supports effective data processing and analysis for security detection in ICT systems without the interference of human authorities. Many industries are developing machine-learning-adapted solutions to support security for smart hardware, distributed computing, and the cloud. In our Special Issue book, we focus on the deployment of symmetry-adapted machine learning for information security in various application areas. This security approach can support effective methods to handle the dynamic nature of security attacks by extraction and analysis of data to identify hidden patterns of data. The main topics of this Issue include malware classification, an intrusion detection system, image watermarking, color image watermarking, battlefield target aggregation behavior recognition model, IP camera, Internet of Things (IoT) security, service function chain, indoor positioning system, and crypto-analysis. In bringing to the readers the book *5G Multimedia Communication: Technology, Multiservices and Deployment*, the aim is to present current work and direction on the challenging subject of multimedia communications, with theoretical and practical roots. The past two decades have witnessed an extremely fast evolution of mobile cellular network technology. The fifth generation of mobile wireless systems has achieved the first milestone toward finalization and deployment by 2020. This is vital to the development of future multimedia communications. Also, it is necessary to consider 5G technology from the performance point of view by analyzing network capabilities to the operator and to the end user in terms of data rate, capacity, coverage, energy efficiency, connectivity and latency. The book is divided into three major parts with each part containing four to

seven chapters: • Critical enabling technology • Multiservices network • Deployment scenarios The first part discusses enabling technologies, such as green communication, channel modeling, massive and distributed MIMO and ML-based networks. In the second part, different methodologies and standards for multiservices have been discussed. Exclusive chapters have been dedicated to each of the open research challenges such as multimedia operating in 5G environment, network slicing optimization, mobile edge computing, mobile video multicast/broadcast, integrated satellite and drone communication. The third part paved the way to deployment scenarios for different innovative services including integration of a multienergy system in smart cities, intelligent transportation systems, 5G connectivity in the transport sector, healthcare services, 5G edge-based video surveillance and challenges of connectivity for massive IoT in 5G and beyond systems. The book is written by experts in the field who introduced scientific and engineering concepts, covering the 5G multimedia communication areas. The book can be read cover-to-cover or selectively in the areas of interest for the readers. Generally, the book is intended for novel readers who could benefit from understanding general concepts, practitioners who seek guidance into the field and senior-level as well as graduate-level engineering students in understanding the process of today's wireless multimedia communications.
