NEW YORK TIMES
BESTSELLER The
complete, uncensored
history of the award-
winning The Daily
Show with Jon Stewart,
as told by its
correspondents,
writers, and host. For
almost seventeen
years, The Daily Show
with Jon Stewart
brilliantly redefined the
borders between
television comedy,
political satire, and
opinionated news
coverage. It launched
the careers of some of
today's most
significant comedians,
highlighted the
hypocrisies of the
powerful, and garnered
23 Emmys. Now the
show's behind-the-
scenes gags,

controversies, and camaraderie will be chronicled by the players themselves, from legendary host Jon Stewart to the star cast members and writers-including Samantha Bee, Stephen Colbert, John Oliver, and Steve Carell - plus some of The Daily Show's most prominent guests and adversaries: John and Cindy McCain, Glenn Beck, Tucker Carlson, and many more. This oral history takes the reader behind the curtain for all the show's highlights, from its origins as Comedy Central's underdog late-night program to Trevor Noah's succession, rising from a scrappy jester in the 24-hour political news cycle to become part of the beating heart of politics-a trusted

source for not only comedy but also commentary, with a reputation for calling bullshit and an ability to effect real change in the world. Through years of incisive election coverage, passionate debates with President Obama and Hillary Clinton, feuds with Bill O'Reilly and Fox, and provocative takes on Wall Street and racism, The Daily Show has been a cultural touchstone. Now, for the first time, the people behind the show's seminal moments come together to share their memories of the last-minute rewrites, improvisations, pranks, romances, blow-ups, and moments of Zen both on and off the set of one of America's most groundbreaking

shows.

Java Ee 8 Development with Eclipse Packt Publishing Ltd
Learn a use-case approach for developing Java enterprise applications in a continuously test-driven fashion. With this hands-on guide, authors and JBoss project leaders Andrew Lee Rubinger and Aslak Knutsen show you how to build high-level components, from persistent storage to the user interface, using the Arquillian testing platform and several other JBoss projects and tools. Through the course of the book, you'll build a production-ready software conference tracker called GeekSeek, using source code from GitHub. Rubinger and Knutsen demonstrate

why testing is the very foundation of development—essential for ensuring that code is consumable, complete, and correct. Bootstrap an elementary Java EE project from start to finish before diving into the full-example application, GeekSeek. Use both relational and NoSQL storage models to build and test GeekSeek's data persistence layers. Tackle testable business logic development and asynchronous messaging with an SMTP service. Expose enterprise services as a RESTful interface, using Java EE's JAX-RS framework. Implement OAuth authentication with JBoss's PicketLink identity management service. Validate the UI by automating

interaction in the browser and reading the rendered page

In Pro CDI 2 in Java EE 8, use CDI and the CDI 2.0 to automatically manage the life cycle of your enterprise Java, Java EE, or Jakarta EE application's beans using predefined scopes and define custom life cycles using scopes. In this book, you will see how you can implement dynamic and asynchronous communication between separate beans in your application with CDI events. The authors explain how to add new capabilities to the CDI platform by implementing these capabilities as extensions. They show you how to use CDI in a Java SE environment with the new CDI initialization and configuration API, and

how to dynamically modify the configuration of beans at application startup by using dynamic bean building. This book is compatible with the new open source Eclipse Jakarta EE platform and tools.
What You Will Learn
Use qualifier annotations to inject specific bean implementations
Programmatically retrieve bean instances from the CDI container in both Java SE and Java EE when injecting them into an object isn't possible
Dynamically replace beans using the `@Alternative` annotation to, for example, replace a bean with a mock version for testing
Work with annotation literals to get instances of annotations to use

with the CDI API
