"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major

social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

"When Jean Tirole won the 2014 Nobel Prize in Economics, he suddenly found himself being stopped in the street by complete strangers and asked to comment on issues of the day, no matter how distant from his own areas of research. His transformation from academic economist to public intellectual prompted him to reflect further on the role economists and their discipline play in society. The result

is Economics for the Common Good, a passionate manifesto for a world in which economics, far from being a 'dismal science,' is a positive force for the common good. Economists are rewarded for writing technical papers in scholarly journals, not joining in public debates. But Tirole says we urgently need economists to engage with the many challenges facing society, helping to identify our key objectives and the tools needed to meet them. To show how economics can help us realize the common good, Tirole shares his insights on a broad array of questions affecting our everyday lives and the future of our society, including global warming, unemployment, the post-2008 global financial order, the euro crisis, the digital revolution, innovation, and the proper balance between the free market and regulation. Providing a rich account of how economics can benefit everyone, Economics for the Common Good sets a new agenda for the role of economics in society"--Provided by publisher.

Economics of Money, Banking, and Financial Markets heralded a dramatic shift in the teaching of the money and banking course in its first edition, and today it is still setting the standard. By applying an analytical framework to the patient, stepped-out development of models, Frederic Mishkin draws students into a deeper understanding of modern monetary theory, banking, and policy. His landmark combination of common sense applications with current, real-world events provides authoritative, comprehensive coverage in an informal tone students appreciate.

Johannes Corrodi Katzenstein offers a contribution to the current debate on Kierkegaard, mostly concerning the rationality of religious belief and the presumed religious neutrality (autonomy) of philosophical and scientific thought. More specifically, his book is an attempt to relate Kierkegaard's theory of the stages of life (aesthetic, ethical, religious) to issues that have been of utmost concern to Anglo-American (analytical) philosophy, such as the nature of truth, rational knowledge, objectivity, etc. From this angle, Kierkegaard turns out to be not the irrationalist he has often been made into but rather the outspoken witness of a passion that guides all thinking, i.e. the passion to think what cannot be thought. An attempt is made to show that for Kierkegaard, anticipating some of the arguments of contemporary postsecular philosophy, the ideal of pure or autonomous reason inevitably has its basis in a pre-rational, often tacit commitment to an origin whose primary home is in religious faith. Rather than precluding dialogue, awareness of these deeper forces and starting-points of our various philosophical and scientific outlooks is a critical requirement for mutual understanding between secularist and religious perspectives and traditions competing for cultural and political dominance.

This workbook, unlike many others, is not written to "accompany" a particular text, but to be suitable for use with the standard ones on the market. The book begins with discussion of the subject of economics. This is followed by separate chapters on concepts such as supply and demand; production and distribution; national income; money, banking, and prices; international trade; and economic policy. Each chapter is divided into four main sections—textual summaries of the ground covered, questions and problems in economic analysis, questions and exercises on the U.K. economy, and essays. The book also includes a Reading Guide, which lists the major British standard general textbooks at an introductory level as well as one or two of the best-known American and a small number in special fields.

Reassessing performance and direction Mohr Siebeck

Based on original research and analysis by a group of health policy experts and economists from across the world, this book analyzes the causes and consequences of the expanding global and local commercialization of health care. It argues for the necessity and possibility of effective policy responses to develop good quality, universally inclusive health systems worldwide. The book aims to contribute to a shift in the international 'common sense' in health policy towards a more humane, inclusive, egalitarian, and ethical framework for policy formulation.

The UK fuel tax protests of September 2000 generated considerable debate about fuel prices and taxation and put transport in the media spotlight. Away from the immediate events and debates surrounding the protests, the experience offered the opportunity for longer-term lessons on transport to be gained. The editors of this volume, Glenn Lyons and Kiron Chatterjee, saw the opportunity to get fresh insight into car dependence and conducted a large-scale travel behaviour survey to find out how car users coped when restricted in being able to buy petrol. This book presents their findings and collects together articles written by other researchers on a range of topics including fuel taxation, transport pricing, policy acceptability, travel behaviour and goods distribution.

This book brings together academics, members of European institutions, and regional and national level policymakers in order to assess the performance and direction of EU Cohesion policy against the background of the most significant reforms to the policy in a generation. Responding to past criticisms of the effectiveness of the policy, the policy changes introduced in 2013 have aligned European Structural and Investment Funds with the Europe 2020 strategy and introduced measures to improve strategic coherence, performance and integrated development. EU Cohesion Policy: Reassessing performance and direction argues that policy can only be successfully developed and implemented if there is input from both academics and practitioners. The chapters in the book address four important issues: the

effectiveness and impact of Cohesion policy at European, national and regional levels; the contribution of Cohesion policy to the Europe 2020 strategy of smart, sustainable and inclusive growth; the

importance of quality of government and administrative capacity for the effective management of the Funds; and the inter-relationships between institutions, territory and place-based policies. The

volume will be an invaluable resource to students, academics and policymakers across economics, regional studies, European studies and international relations.
