 Total quality management (TQM), reengineering, the workplace of the twenty-first century—the 1990s have brought a sense of urgency to organizations to change or face stagnation and decline, according to *Enhancing Organizational Performance*. Organizations are adopting popular management techniques, some scientific, some faddish, often without introducing them

properly or adequately measuring the outcome. *Enhancing Organizational Performance* reviews the most popular current approaches to organizational change—total quality management, reengineering, and downsizing—in terms of how they affect organizations and people, how performance improvements can be measured, and what questions remain to be answered by researchers. The committee explores how theory, doctrine, accepted wisdom, and personal experience have all served as sources for organization design. Alternative organization structures such as teams, specialist networks, associations, and virtual organizations are examined. *Enhancing Organizational Performance* looks at the influence of the organization's norms, values, and beliefs—its culture—on people and their performance, identifying cultural "levers" available to organization leaders. And what is leadership? The committee sorts through a wealth of research to identify behaviors and skills related to leadership effectiveness. The volume examines techniques for developing these skills and suggests new competencies that will become required with globalization and other trends. Mergers, networks, alliances, coalitions—organizations are increasingly turning to new intra-

and inter-organizational structures. *Enhancing Organizational Performance* discusses how organizations cooperate to maximize outcomes. The committee explores the changing missions of the U.S. Army as a case study that has relevance to any organization. Noting that a musical greeting card contains more computing power than existed in the entire world before 1950, the committee addresses the impact of new technologies on performance. With examples, insights, and practical criteria, *Enhancing Organizational Performance* clarifies the nature of organizations and the prospects for performance improvement. This book will be important to corporate leaders, executives, and managers; faculty and students in organizational performance and the social sciences; business journalists; researchers; and interested individuals.

Bringing the major current insights in implementation research and theory together, *Public Policy, Implementation and Governance* reviews the literature on public policy implementation, relating it to contemporary developments in thinking about governance. The text stresses the continuing importance of a focus upon implementation processes and explores its central relevance to the practice of public administration. In light of the changing nature of governance, Hill and Hupe suggest strategies for both future research on and management of public policy implementation. Their basic approach is two-fold: firstly, to understand the process of implementation and secondly, to address how one might control and affect this process. Re-exploring the state of the art of the study of implementation as a sub-discipline of political science and public administration, this book will be essential reading for students and researchers in public policy, social policy, public management, public administration and governance. 'This is an excellent and much needed book. Hill and Hupe have provided a well written and highly accessible account of the development of implementation studies which will be immensely valuable to everyone concerned with understanding implementation in modern policy making.' - Professor Wayne Parsons, University of London

*Dietary Fibers: Chemistry and Nutrition* contains the proceedings of a symposium on Dietary Fibers: Chemistry and Nutrition held during the American Chemical Society meeting in Miami Beach, Florida, on September 11-15, 1978. The papers explore the chemical and nutritional aspects of dietary fibers and cover a wide range of topics dealing with analysis, biochemistry, medicinal chemistry, microbiology, and physiology. This book is comprised of 18 chapters and begins by assessing the interactions between small molecules and hydrated polymer networks, paying particular attention to some structural features of gel-fiber systems as well as partitioning and transport phenomena. The complex structure of dietary fibers found in cell walls are reviewed, along with the metabolic effects of dietary fibers related to mineral binding, blood cholesterol and other lipids, glucose tolerance, bile acids, and carcinogens and cocarcinogens. The interactions of metabolic substances with polysaccharides and lignins are also examined. This monograph will be a valuable resource for biochemists, nutritionists, and nutritional scientists.

Adoption of international corporate governance best practices leads to long-term sustainability and resilience, and can be a competitive tool to attract foreign investments. The Asian Development Bank, in partnership with the ASEAN Capital Markets Forum, have jointly developed the ASEAN Corporate Governance Scorecard, an assessment based on publicly available information and benchmarked against international best practices that encourage publicly listed companies to go beyond national legislative requirements. This report can be used by capital market regulators and other stakeholders as a reference to understand the current corporate governance standards across the region.
