My renewed acknowledgements are due, and are very heartily  
rendered, to Professor Klein and Professor Greenfield, who have  
read and commented on each sheet as it passed through the  
press. Dr George Thin has in like manner done me the kindness of  
reading the chapters on the Skin. Professor Ziegler has given me  
his ready help on many points, and has enabled me to utilise his  
additions to the text of the later sections. Dr Sims Woodhead  
courteously placed at my disposal the drawing of Actinomyces  
from which Fig. 174 B was engraved. In view of the generous aid I  
have thus received I am encouraged to hope that little in recent  
Pathology has been overlooked which is likely to be of value to  
English students. About the Publisher Forgotten Books publishes

This is a reproduction of the original artefact. Generally these books are created from careful scans of the original. This allows us to preserve the book accurately and present it in the way the author intended. Since the original versions are generally quite old, there may occasionally be certain imperfections within these reproductions. We're happy to make these classics available again for future generations to enjoy!

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

Excerpt from A d104-Book of Pathological Anatomy and Pathogenesis, Vol. 2 The very rapid sale of Professor Ziegler's text-book in Germany has led to an unforeseen delay in the completion of the Second Part. Two editions of the sections already published having been exhausted, the Professor has been obliged to give to the preparation of a third edition of these the time he hoped to spend in completing the remaining sections. My own purpose was that the second volume of this English version should conclude the book, but in view of the requests which reach

me from every side I have thought it better to bring out the first eight sections as an instalment than to put off the publication of the whole for another year. The third and concluding volume is already in hand, and will be of about the same size as the present. It will contain the sections on the Kidney, the Lungs, and the Nervous System, together with general indexes to the whole work. In the third German edition the arrangement of the articles has been recast, and other changes of form have been made but in order to preserve the continuity of the English version I shall follow throughout the plan of the first volume. This plan has been generally approved, and it appears to be the most convenient for English students. My renewed acknowledgments are due, and are very heartily rendered, to Professor Klein and Professor Greenfield, who have read and commented on each sheet as it passed through the press. Excerpt from *A Text-Book of Pathological Anatomy and Pathogenesis* I have first of all, at Professor Ziegler's request, to say something with regard to the German original of the text-book now offered to English students. His first design was to bring out a new and revised edition of Foerster's well-known manual of Pathological Anatomy. But as the revision went on, it became clear that the present state of our knowledge of Pathology could not be fitly represented without recasting and almost rewriting the whole work. It was therefore thought better that he should undertake an entirely new text-book, in which the subject should

throughout be treated from a modern point of view. The great success of the first edition in Germany would seem to show that such a book was needed, and that the author's manner of treating the subject was approved by teachers of Pathology. Professor Ziegler explains that a great part of his text is based upon observations made or verified by himself. Where he has drawn upon other sources he has carefully cited the needful authorities. "I am not blind to the fact," he adds, "that my statements and criticisms may bear too strongly the mark of my own personal views, and that these views may not be readily accepted by all pathologists. But I have nevertheless held it wiser not to introduce much matter of controversy into the text of a treatise intended mainly for students.
