The conference proceedings of the International Conference on Systems, Computing Sciences and Software Engineering include a set of rigorously reviewed world-class manuscripts addressing and detailing state-of-the-art research projects in the areas of Computer

Science, Software Engineering, Computer Engineering, and Systems Engineering and Sciences. The International Conference on Systems, Computing Sciences and Software Engineering (SCSS 2005) was part of the International Joint Conferences on Computer, Information and Systems Sciences and Engineering (CISSE 2005). CISSE 2005, the World's first Engineering/Computing and Systems Research E-Conference was the first high-caliber Research Conference in the world to be completely conducted online in real-time via the internet. CISSE received 255 research paper submissions and the final program included 140 accepted papers, from more than 45 countries. The whole concept and format of CISSE 2005 was very exciting and ground-breaking. The powerpoint presentations, final paper manuscripts and time schedule for live presentations over the web had been available for 3 weeks prior to the start of the conference for all registrants, so they could pick and choose the presentations they want to attend and think about questions that they might want to ask. The live audio presentations were also recorded and are part of the permanent

CISSE archive, which includes all power point presentations, papers and recorded presentations. All aspects of the conference were managed on-line; not only the reviewing, submissions and registration processes; but also the actual conference. Conference participants - authors, presenters and attendees - only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground-breaking conference. The on-line structure of this high-quality event allowed academic professionals and industry participants to contribute work and attend world-class technical presentations based on rigorously refereed submissions, live, without the need for investing significant travel funds or time out of the office. Suffice to say that CISSE received submissions from more than 50 countries, for whose researchers, this opportunity presented a much more affordable, dynamic and well-planned event to attend and submit their work to, versus a classic, on-the-ground conference. The CISSE conference audio room provided superb audio even over low speed internet connections, the ability to

display PowerPoint presentations, and cross-platform compatibility (the conferencing software runs on Windows, Mac, and any other operating system that supports Java). In addition, the conferencing system allowed for an unlimited number of participants, which in turn granted CISSE the opportunity to allow all participants to attend all presentations, as opposed to limiting the number of available seats for each session. The implemented conferencing technology, starting with the submission & review system and ending with the online conferencing capability, allowed CISSE to conduct a very high quality, fulfilling event for all participants.

When the Barracuda arrived in the Plymouth lineup in mid-1964, it was given an unbearable task: compete against the new Ford Mustang. Out the gate, it was outsold by a 6 to 1 margin. Barracuda could always compete with Mustang in the performance category, but aesthetically it just wasn't accepted like its Ford Mustang and Chevrolet Camaro counterparts. That was until 1970, when a complete re-design in the E-Body platform turned the tide. In terms of performance, the 1970-1974 Barracudas and Challengers were every bit the measure of the Ford and GM offerings. By 1971, the handsome Barracuda had established itself as one of the best-performing cars in the marketplace. Ordering the 'Cuda, owners could lay waste to Mustang and Camaro owners with such stout engine packages as the 440-6 and 426 Hemi. Sales numbers never did match that of its cross-town rivals, but in the end, the 1971 'Cuda won the war. No other mass-production Pony Car can consistently claim asking

prices of \$2,000,000 its top model (in today's prices). As in all In Detail Series books, you get an introduction and historical overview, an explanation of the design and concepts involved in creating the car, a look at marketing and promotion, an in-depth study of all hardware and available options, as well as an examination of where the car is on the market today. Also included are paint and option codes, VIN and build tag decoders, as well as production numbers.

In his life-changing book, Dr. Taylor Hartman introduces you to the People Code and why people do what they do. The concept of Motive is a fresh method for analyzing your own innate personality as well as that of those around you. You then have the ability to utilize that knowledge to improve workplace and personal relationships. As an author, psychologist, and leadership coach, Dr. Hartman offers a remarkably astute system for segmenting everyone into specific Motive-types denoted by a color: Red (power wielders), Blue (do-gooders), White (peacekeepers), and Yellow (fun lovers). He then explains how to ensure that all possible alliances between them function at optimum effectiveness. If you struggle with self-acceptance and have questions about why you and others act

the way you do, Dr. Hartman and The People Code can help you maximize your life success by improving your day-to-day relationships.
