Designing and Teaching Undergraduate Capstone Courses Springer Publishing Company
 Enrich your students and the institution with a high-impact practice Designing and Teaching Undergraduate Capstone Courses is a practical, research-backed guide to creating a course that is valuable for both the student and the school. The book covers the design, administration, and teaching of capstone courses throughout the undergraduate curriculum, guiding departments seeking to add a capstone course, and allowing those who have one to compare it to others in the discipline. The ideas presented in the book are supported by regional and national surveys that help the reader understand what's common, what's exceptional, what works, and what doesn't within capstone courses. The authors also provide additional information specific to different departments across the curriculum, including STEM, social sciences, humanities, fine arts, education, and professional programs. Identified as a high-impact practice by the National Survey of Student Engagement (NSSE) and the Association of American Colleges and Universities'

LEAP initiative, capstone courses culminate a student's final college years in a project that integrates and applies what they've learned. The project takes the form of a research paper, a performance, a portfolio, or an exhibit, and is intended to showcase the student's very best work as a graduating senior. This book is a guide to creating for your school or department a capstone course that ties together undergraduate learning in a way that enriches the student and adds value to the college experience. Understand what makes capstone courses valuable for graduating students. Discover the factors that make a capstone course effective, and compare existing programs, both within academic disciplines and across institutions. Learn administrative and pedagogical techniques that increase the course's success. Examine discipline-specific considerations for design, administration, and instruction. Capstones are generally offered in departmental programs, but are becoming increasingly common in general education as well. Faculty and administrators looking to add a capstone course or revive an existing one need to understand what constitutes an effective program. Designing and Teaching Undergraduate Capstone Courses provides an easily digested summary of existing research, and offers expert guidance on making your capstone courses successful.

American Library Association
 How do college students really conduct research for classroom assignments? In 2008, five large Illinois universities were awarded a Library Services and Technology Act Grant to try to answer that question. The resulting ongoing study has already yielded some eye-opening results. The findings suggest changes ranging from simple adjustments in service and resources to modifying the physical layout of the library. In this book the editors, both anthropological researchers have been involved with the project since its beginning. This book: Summarizes the study's history, including its goals, parameters, and methodology; Offers a comprehensive discussion of the research findings, touching on issues such as website design, library instruction for faculty, and meeting the needs of commuter and minority students; Details a number of service reforms which have already been implemented at the participating institutions. This book deepens our understanding of how academic libraries can better serve students' needs, and also serves as a model for other researchers interested in a user-centered approach to evaluating library services.

Critiques and calls for reform have existed for decades within music education, but few publications have offered concrete suggestions as to how things might be done differently. Motivated by a desire to do just that, *College Music Curricula for a New Century* considers what a more inclusive, dynamic, and socially engaged curriculum of musical study might look like in universities. Editor Robin Moore creates a dialogue among faculty, administrators, and students about what the future of college music instruction should be and how teachers, institutions, and organizations can transition to new paradigms. Including contributions from leading figures in ethnomusicology, music education, theory/composition, professional performance, and administration, *College Music Curricula for a New Century* addresses college-level curriculum reform, focusing primarily on performance and music education degrees, and offer ideas and examples for a more inclusive, dynamic, and socially engaged curriculum of applied musical study. This book will appeal to thoughtful faculty looking for direction on how to enact reform, to graduate students with investment in shaping future music curricula, and to administrators who know change is on the horizon and seek wisdom and practical advice for implementing change. *College Music Curricula for a New Century* reaches far beyond any musical subdiscipline and addresses issues pertinent to all areas of music study.

Developed by an extremely active open source community, Moodle is a sophisticated course management system that's ideal for creating dynamic online learning communities and for supplementing face-to-face learning. Used in more than 115 countries and supporting over 60 languages, Moodle can scale from a single-teacher site to a 40,000-student university. Teachers who use Moodle have access to an array of powerful tools such as assignments, forums, journals, quizzes, surveys, chat rooms, and workshops. Using Moodle is a comprehensive, hands-on guide that explains how the system works, with plenty of examples and best practices for its many features and plug-in modules. Authored by a member of the Moodle community, this authoritative book also exposes little-known but powerful hacks for more technically savvy users. For anyone

who is using or thinking of using this CMS, Using Moodle is required reading.

The need to manage, analyze, and extract knowledge from data is pervasive across industry, government, and academia. Scientists, engineers, and executives routinely encounter enormous volumes of data, and new techniques and tools are emerging to create knowledge out of these data, some of them capable of working with real-time streams of data. The nation's ability to make use of these data depends on the availability of an educated workforce with necessary expertise. With these new capabilities have come novel ethical challenges regarding the effectiveness and appropriateness of broad applications of data analyses. The field of data science has emerged to address the proliferation of data and the need to manage and understand it. Data science is a hybrid of multiple disciplines and skill sets, draws on diverse fields (including computer science, statistics, and mathematics), encompasses topics in ethics and privacy, and depends on specifics of the domains to which it is applied. Fueled by the explosion of data, jobs that involve data science have proliferated and an array of data science programs at the undergraduate and graduate levels have been established. Nevertheless, data science is still in its infancy, which suggests the importance of envisioning what the field might look like in the future and what key steps can be taken now to move data science education in that direction. This study will set forth a vision for the emerging discipline of data science at the undergraduate level. This interim report lays out some of the information and comments that the committee has gathered and heard during the first half of its study, offers perspectives on the current state of data science education, and poses some questions that may shape the way data science education evolves in the future. The study will conclude in early 2018 with a final report that lays out a vision for future data science education.

How can education become a transformative experience for all learners and teachers? The contributors to this volume contend that the Scholarship of Teaching and Learning (SoTL) can provide a strong foundation for the role of education in promoting social justice. The collection features contributions by an array of educators and scholars, highlighting the various ways that learners and teachers can prepare for and engage with social justice concerns. The essays offer reflections on the value of SoTL in relation to educational ethics, marginalized groups, community service and activism, counter narratives, and a range of classroom practices. Although the contributors work in a variety of disciplines and employ different theoretical frameworks, they are united by the conviction that education should improve our lives by promoting equity and social justice.

This book describes lessons learned from the implementation of research based learning at Maastricht University. Well-known for its problem based learning (PBL) educational model, Maastricht University implemented research-based learning (RBL) as a new educational concept in addition to PBL, around 2009. The model has taken the shape of an excellence programme offering third-year bachelor students an opportunity to conduct academic research together with academic staff. The introduction of the research-based learning concept into the programmes of all Maastricht University's faculties has resulted in a range of RBL models that vary to fit the various disciplines and programmes offered by the faculties. The book first presents theoretical models and a description of the concepts of research-based learning and undergraduate research (UGR). Next, by means of case studies, it describes the formulas developed to suit the various programmes, the challenges encountered, the initial reservations on the part of the staff, the limitations caused by regulations and demands of the curricula, as well as the successes and results of the excellence programme. The disciplines described in the case studies include psychology and neuroscience, knowledge engineering, social and cultural sciences, law, and business and economics.

This text introduces Taking Flight, a year-long clinical psychology internship program to be implemented for students of color and first-generation college-bound students. The program offers hands-on opportunities for participants to develop skills that will propel them to seek advanced degrees in mental health. The book offers a comprehensive internship curriculum based on a culturally affirming mentorship framework that aims to increase interns' exposure of clinical psychology, build confidence in their ability, and foster a sense of belonging as a means to inspire educational and career pursuits in the field. Chapters cover topics such as common mental health concerns; self-reflections and insights; research and clinical approaches; capstone projects and presentations; and integration of knowledge, skills, and self-concept. An appendix includes worksheets to utilize throughout the course of the program. The program is designed to be operated within psychology departments in partnership with local high schools. The text will guide mental health providers and school professionals to executing this program in the hopes of ensuring a more diverse and inclusive clinical psychology workforce.

The Sociology Student's Guide to Writing, by Angelique Harris and Alia R. Tyner-Mullings, is a brief, economical reference work that gives practical advice about the writing tasks and issues that undergraduate students face in their first sociology courses. Along with more traditional topics, it incorporates valuable information about composing emails, writing for online forums, and using technology for information-gathering and note-taking. Used by itself or in combination with other texts, this book will increase the quality of student writing and enhance their knowledge of how sociologists communicate in writing.

Student Success in College describes policies, programs, and practices that a diverse set of

institutions have used to enhance student achievement. This book clearly shows the benefits of student learning and educational effectiveness that can be realized when these conditions are present. Based on the Documenting Effective Educational Practice (DEEP) project from the Center for Postsecondary Research at Indiana University, this book provides concrete examples from twenty institutions that other colleges and universities can learn from and adapt to help create a success-oriented campus culture and learning environment.
