Neurology for the Speech-
Language Pathologist
presents the
fundamentals in
understanding the

nervous system in the
context of
communication. The book
takes into consideration
the nervous anatomic
systems, such as sensory
pathways. The text first
introduces the speech-

language neurology, and then proceeds to discussing the organization and neural function of the nervous system. Next, the book relates the nervous anatomic systems to language, speech, and hearing. The text also covers clinical speech syndromes and disorders. The book will be most useful to speech pathologists and therapists. Neurologists and neurosurgeons will also greatly benefit from the text.

 Many children and adults experience impairment of their communication skills. These communication disorders impact adversely on all aspects of these individuals' lives. In thirty dedicated chapters, The Cambridge Handbook of Communication Disorders examines the full range of

developmental and acquired communication disorders and provides the most up-to-date and comprehensive guide to the epidemiology, aetiology and clinical features of these disorders. The volume also examines how these disorders are assessed and treated by speech and language therapists and addresses recent theoretical developments in the field. The handbook goes beyond well-known communication disorders to include populations such as children with

emotional disturbance, adults with non-Alzheimer dementias and people with personality disorders. Each chapter describes in accessible terms the most recent thinking and research in communication disorders. The volume is an ideal guide for academic researchers, graduate students and professionals in speech and language therapy. Neurocognitive Development: Normative Development Cengage Learning

Motor Speech Disorders
 Lippincott Williams & Wilkins
 Neuropsychology of Language, Reading, and Spelling explores the many neural systems and

subsystems that contribute to the production and comprehension of oral and written language. This book is organized into five parts encompassing 12 chapters that emerged from the 1980 International Conference on the Neuropsychology of Language, Reading, and Spelling, sponsored by the Program in Neurosciences and Education at Teachers College, Columbia University. This conference highlights the

neurological and behavioral interrelatedness of language, reading, and spelling. After briefly dealing with the cognitive and language development, as well as learning to read and to spell as instances of acquiring skill, this book goes on discussing the activity of the learner in the development skill, the influence of interacting forces in the developing nervous systems, and the role of peripheral mechanisms in the development of speech

and language. A chapter examines the central integrative mechanisms, specifically the electrophysiological research with infants on the dependence of language perception on multidimensional, complex processes, and not solely as a left- or right-hemisphere task. This chapter also provides evidence of discrete localization of language processes within the dominant hemisphere at both cortical and subcortical levels. The final four chapters are

devoted to an analysis of developmental disorders from the varied perspectives of neurology, linguistics, neuropsychology, and education. This book will be of value to neuropsychologists and developmental biologists.

Discussed in this book is the association between speech and movements, especially those of the preferred hand. Both are skilled motor activities that appear to depend upon a similar neural organization that is available in the left hemisphere of the brain. The nature of this association of the cerebral control of speech and skilled manual performance is discussed in four sections: 1. Motor control and speech examines speech as a motor activity 2.

Language and gesture examines the correspondence between spoken language and manual gesture 3. Motor performance and aphasia examines the motor impairments associated with aphasia 4. Interactions of speech and manual performance examines the interactions that occur between concurrent verbal and manual activities

Trump Fiction:Essays on Donald Trump in Literature, Film, and Television examines

depictions of Donald Trump and his fictional avatars in literature, film, and television, including works that took up the subject of Trump before his successful presidential campaign (in terms that often uncannily prefigure his presidency) as well as those that have appeared since he took office. Covering a range of texts and approaches, the essays in this collection analyze the place Trump has assumed in literary and popular culture. By investigating how authors including Bret Easton Ellis,

Amy Waldman, Thomas Pynchon, Howard Jacobson, Mark Doten, Olivia Laing, and Salman Rushdie, along with films and television programs like *The Fresh Prince of Bel-Air*, *Sesame Street*, *Sex and the City*, *Two Weeks Notice*, *Our Cartoon President*, and *Pose* have approached and shaped the discourse surrounding Trump, the contributors collectively demonstrate the ways these cultural artifacts serve as sites through which the culture both resists and abets Trump

and his rise to power.
