Made famous by the Italian mathematician Leonardo De Pisa, the Fibonacci number series holds a Golden Ratio that is universally

found in nature and used by architects, plastic surgeons, and many others to achieve "perfect" aesthetic proportions. Now, in this groundbreaking guide, noted technical trading advisor Carolyn Boroden shows you how Fibonacci pattern studies can be used as an extremely effective method for achieving greater profitability in stocks, futures, and Forex markets. Fibonacci Trading provides a one-stop resource of reliable tools and clear explanations for both identifying and taking advantage of the trade setups naturally occurring in the markets that will enable you to reach the highest rate of profitable trades. Inside, you'll find a unique trading methodology based on Fibonacci ratios, and the author's personal experience analyzing and setting up the markets in real time, which makes this practical volume invaluable to the self-directed investor. Complete with detailed charts and insightful graphics in each chapter, Fibonacci Trading features: Dependable guidance for determining important support and resistance levels, along with expert advice for using them to maximize profits and limit losses Step-by-step processes for using Fibonacci analysis to predict turning points in the market far enough in advance to generate substantial profit Valuable tips for using Fibonacci analysis to establish optimal stop-loss placement Revealing coverage on how Fibonacci relationships can create a roadmap for the trader based on high percentage patterns Fibonacci Trading also provides a four-step formula for applying the covered techniques in a highly effective approach. Flexible enough for all markets and trading styles, the formula helps you focus your newly developed knowledge and skill sets into a solid trading methodology, defined trading plan, successful trading mindset, and disciplined trading approach that

stacks the odds for profit in your favor. This hands-on guide is packed with a wealth of actual trading situations, setups, and scenarios that bring the four-step formula to life so you can immediately use it in the real world.

Secrets of a Pivot Boss Fred McAllen

While complex strategies and systems may work for some traders, understanding price action is all you really need to succeed in this arena. Price action analysis is an effective approach to trading today's markets—whether you're involved in stocks, futures, or options. It allows you to focus on the process of trading without being overwhelmed by a complicated collection of trading techniques. And while this method may appear elementary, it can significantly enhance returns as well as minimize downside risk. One way to apply price action analysis to your trading endeavors is with chart patterns. Nobody understands this better than author Al Brooks, a technical analyst for Futures magazine and an independent trader for more than twenty years. Brooks discovered ten years ago that reading price charts without indicators proved to be the most simple, reliable, and profitable way for him to trade. Mastering that discipline is what made him consistently successful in trading. Now, with *Reading Price Charts Bar by Bar*, Brooks shares his extensive experience on how to read price action. At the end of the day, anyone can look at a chart, whether it is a candle chart for E-mini

S&P 500 futures trading or a bar chart for stock trading, and see very clear entry and exit points. But doing this in real time is much more difficult. Reading Price Charts Bar by Bar will help you become proficient in the practice of reading price action—through the use of trendlines and trend channel lines, prior highs and lows, breakouts and failed breakouts, and other tools—and show you how this approach can improve the overall risk-reward ratio of your trades. Written with the serious trader in mind, this reliable resource addresses the essential elements of this discipline, including the importance of understanding every bar on a price chart, why particular patterns are reliable setups for trades, and how to locate entry and exit points as markets are trading in real time. Brooks focuses on five-minute candle charts to illustrate basic principles, but discusses daily and weekly charts as well. Along the way, he also explores intraday swing trades on several stocks and details option purchases based on daily charts—revealing how using price action alone can be the basis for this type of trading. There's no easy way to trade, but if you learn to read price charts, find reliable patterns, and get a feel for the market and time frame that suits your situation, you can make money. While price action trading doesn't require sophisticated software or an abundance of indicators, this straightforward approach can still put you in a better position to profit in almost any market. Reading Price Charts Bar by Bar will show you how.

Scalping is Fun! Part 3: How do I rate my Trading Results?

Scalping is the fastest way to make money in the stock market. There is hardly a more effective method for increasing a trader's capital. The Heikin Ashi Trader explains why this is so in this four-part series about scalping. In this third book, the Heikin Ashi

trader answers the question of how the trading results of a scalper are analyzed and correctly evaluated. Based on the weekly results of a single trader, he examines what factors matter to having long-term success in the stock market. The analysis of the trading journal for 12 weeks allows an inside look at the learning curve of a budding professional. This highly effective scalping strategy applies to short time frames, such as the 1-minute chart, as well as longer periods. You can trade, using this universal method, in equity indices and in the currency markets. Typical instruments are futures, foreign exchange, and CFDs. Content: 1. The Trading Journal as a weapon 2. Forex scalping is a popular method involving the quick opening and liquidation of positions. The term "quick" is imprecise, but it is generally meant to define a timeframe of about 3-5 minutes at most, while most scalpers will maintain their positions for as little as one minute. The popularity of scalping is born of its perceived safety as a trading style. Many traders argue that since scalpers maintain their positions for a brief time period in comparison to regular traders, market exposure of a scalper is much shorter than that of a trend follower, or even a day trader, and consequently, the risk of large losses resulting from strong market moves is smaller. Indeed, it is possible to claim that the typical scalper cares only about the bid-ask spread, while concepts like trend, or range are not very significant to him.

Although scalpers need ignore these market phenomena, they are under no obligation to trade them, because they concern themselves only with the brief periods of volatility created by them.

Trading for a Living Successful trading is based on three M's: Mind, Method, and Money. Trading for a Living helps you master all of those three areas: * How to become a cool, calm, and collected trader * How to profit from reading the behavior of the market crowd * How to use a computer to find good trades * How to develop a powerful trading system * How to find the trades with the best odds of success * How to find entry and exit points, set stops, and take profits Trading for a Living helps you discipline your Mind, shows you the Methods for trading the markets, and shows you how to manage Money in your trading accounts so that no string of losses can kick you out of the game. To help you profit even more from the ideas in Trading for a Living, look for the companion volume--Study Guide for Trading for a Living. It asks over 200 multiple-choice questions, with answers and 11 rating scales for sharpening your trading skills. For example: Question Markets rise when * there are more buyers than sellers * buyers are more aggressive than sellers * sellers are afraid and demand a premium * more shares or contracts are bought than sold * I and II * II and III * II and IV * III and IV Answer B. II and III. Every change in price reflects what happens in the battle between bulls and bears. Markets rise when bulls feel more strongly than bears. They rally when buyers are confident and sellers demand a premium for participating in the game that is going against them. There is a buyer and a seller

behind every transaction. The number of stocks or futures bought and sold is equal by definition.
