NATALEE GLOVER

Defending America, School Savings in the National Emergency

Taylor & Francis

In 2005 Adrian College was home to 840 enrolled students and had a tuition income of \$8.54 million. By fall of 2011, enrollment

had soared to 1,688, and tuition income had increased to \$20.45 million. For the first time in years, the small liberal arts college was financially viable. Adrian College experienced this remarkable growth during the worst American economy in seventy years and in a state ravaged by the decline of the big three auto companies.

How, exactly, did this turnaround happen? Crisis in Higher Education: A Plan to Save Small Liberal Arts Colleges in America was written to facilitate replication and generalization of Adrian College's tremendous enrollment growth and retention success since 2005. This book directly addresses the economic competitiveness of small

four-year institutions of higher education and presents an evidence-based solution to the enrollment and economic crises faced by many small liberal arts colleges throughout the country. [Saving Alma Mater](#) Information Age Pub Incorporated Out of the hills of Kentucky and Southern Indiana comes a teacher's voice crying for a completely new approach to public education. A 30-year veteran of public education in 4 states, the author marshals some

convincing arguments that the worst enemy of public education is itself and that the school administrations in most school systems are very definitely guilty of self-perpetuating and extending that failure. While hiding behind the façade of competent, caring administrators, all too many superintendents and principals are guilty of placing the almighty dollar first, their own reputations second and students a poor third. The writer places the blame for all of this failure on the

heads of school administrations while not excusing the culpability of teachers and parents for believing those who try to convince them that education is available for everyone if the correct "magic" curricula, programs, methods, etc. are followed carefully and proper testing is done correctly. Public education is still only educating those students who come to school properly motivated or who are fortunate enough to find those few teachers who are willing to buck the

system and teach the children, not the tests, the curricula or the currently popular (and ever-changing) programs. In answer to the inevitable questions of whether or not the system is worth preserving and what might be done to make a serious attempt at educating every child, the author proposes some interesting and thought provoking strategies. Radically different than those proposed by the Bush administration, these strategies are possible on any level from

a single classroom to an entire nation. Saving America's Schools is a must-read for every serious educator, every parent and every concerned citizen in this country.

Saving America AMACOM
Div American Mgmt Assn
From one of the foremost authorities on education in the United States, Slaying Goliath is an impassioned, inspiring look at the ways in which parents, teachers, and activists are successfully fighting back to defeat the forces that are trying to

privatize America's public schools. Diane Ravitch writes of a true grassroots movement sweeping the country, from cities and towns across America, a movement dedicated to protecting public schools from those who are funding privatization and who believe that America's schools should be run like businesses and that children should be treated like customers or products. Slaying Goliath is about the power of democracy, about the dangers of plutocracy, and about the potential of

ordinary people—armed like David with only a slingshot of ideas, energy, and dedication—to prevail against those who are trying to divert funding away from our historic system of democratically governed, nonsectarian public schools. Among the lessons learned from the global pandemic of 2020 is the importance of our public schools and their teachers and the fact that distance learning can never replace human interaction, the personal connection between teachers and students.

Why Boys Fail

AuthorHouse

Selected as one of the Top 5 Educational Books by Literacy News The signs and statistics are undeniable: boys are falling behind in school. Contrary to conventional wisdom, the biggest culprits are not video games, pop culture, or female-dominated schools biased toward girls. The real problem is that boys have been thrust into a bewildering new school environment that demands high-level reading and writing skills

long before they are capable of handling them. Lacking the ability to compete, boys fall farther and farther behind. Eventually, the problem gets pushed into college, where close to 60% of the graduates are women. In a time when even cops, construction foremen, and machine operators need post-high school degrees, that's a problem. Why Boys Fail takes a hard look at how this ominous reality came to be, how it has worsened in recent years, and why attempts to resolve it often devolve

into finger-pointing and polarizing politics. But the book also shares some good news. Amidst the alarming proof of failure among boys-around the world-there are also inspiring case studies of schools where something is going right. Each has come up with realistic ways to make sure that every student-male and female-has the tools to succeed in school and later in life. Educators and parents alike will take heart in these promising developments, and heed the book's call to action-

not only to demand solutions but also to help create them for their own students and children. [Saving Education](#)

The great majority of working Americans are unprepared to face the difficult task of planning for retirement. In fact, the personal savings rate has been holding steady at zero for several years, down from 8 percent in the mid-1980s. Overcoming the Saving Slump explores the many challenges facing workers in the transition from a

traditional defined benefit pension system to one that requires more individual responsibility, analyzing the considerable impediments to saving and evaluating financial literacy programs devised by employers and the government. Mapping the changing landscape of pensions and the rise of defined contribution plans, Annamaria Lusardi and others investigate new methods for stimulating saving and promoting financial education drawing on the

experience of the United States as well as countries that have privatized their welfare systems, including Sweden and Chile. This timely volume pinpoints where human resources departments, the financial industry, and government officials have succeeded—or failed—in bridging the way to a new retirement system. As the workforce ages and more pensions disappear each second, Lusardi's findings will be invaluable for economists and anyone facing retirement.

Can America's Schools Be

Saved Macmillan + ORM

The compelling history of how Latino immigrants revitalized the nation's cities after decades of disinvestment and white flight Thirty years ago, most people were ready to give up on American cities. We are commonly told that it was a "creative class" of young professionals who revived a moribund urban America in the 1990s and 2000s. But this stunning reversal owes much more to another, far less visible group: Latino and Latina newcomers. Award-

winning historian A. K. Sandoval-Strausz reveals this history by focusing on two barrios: Chicago's Little Village and Dallas's Oak Cliff. These neighborhoods lost residents and jobs for decades before Latin American immigration turned them around beginning in the 1970s. As Sandoval-Strausz shows, Latinos made cities dynamic, stable, and safe by purchasing homes, opening businesses, and reviving street life. Barrio America uses vivid oral histories

and detailed statistics to show how the great Latino migrations transformed America for the better.

Saving Education

Routledge

Noted educator Tom Little and Pulitzer Prize-winning journalist Katherine Ellison reveal the home-grown solution to turning American students into life-long learners. The longtime head of Park Day School, Tom Little embarked on a tour of 43 progressive schools across the country. In this book, his life's work, he interweaves his teaching

experience, the knowledge he gleaned from his trip, and the history of Progressive Education. As Little and Katherine Ellison reveal, these educators and schools invigorate learning and promote inquisitiveness by allowing the curriculum to grow organically out of children's questions—whether they lead to studying the senses, working on a farm, or re-creating a desert ecosystem in the classroom. We see curious students draw on

information across disciplines to think in imaginative yet practical ways, like in a "Mini-Maker Faire" or designing and building a chair from scratch. Becoming good citizens was another of Little's goals. He believed in the need for students to learn how to become advocates for themselves, from setting rules on the playground to engaging in issues of social justice in the wider community. Using the philosophy of Progressive Education, schools can prepare students to shape a

vibrant future in the arts and sciences for themselves and the nation.

Can the Black Church Save Young Black America? John Wiley & Sons

The message of this extraordinary election [in November 2010] is clear enough: the American citizenry has rejected the secular dogma, socialist policies, and machine-driven politics that comprise the Obama agenda. Now, the question is whether President Obama and his

Democratic Party will accept the will of the people and change the destructive course upon which they have set this country. . . . [F]irst and foremost, Republicans must fight to dislodge the secular-socialist machine whose methods and goals are described in this book. This machine has driven America so deeply into debt, and has so fundamentally changed the relationship between the American citizenry and our government, that our children's future is now imperiled. We cannot

assume that after the 2010 election, the machine will simply accept the will of the people. After all, the very purpose of a political machine is to thwart the will of the people.

Loving Learning: How Progressive Education Can Save America's Schools MSU Press

America's public universities educate 80% of our nation's college students. But in the wake of rising demands on state treasuries, changing demographics, growing income inequality, and

legislative indifference, many of these institutions have fallen into decline. Tuition costs have skyrocketed, class sizes have gone up, the number of courses offered has gone down, and the overall quality of education has decreased significantly. Here James C. Garland draws on more than thirty years of experience as a professor, administrator, and university president to argue that a new compact between state government and public universities is needed to

make these schools more affordable and financially secure. Saving Alma Mater challenges a change-resistant culture in academia that places too low a premium on efficiency and productivity. Seeing a crisis of campus leadership, Garland takes state legislators to task for perpetuating the decay of their public university systems and calls for reforms in the way university presidents and governing boards are selected. He concludes that the era is long past

when state appropriations can enable public universities to keep their fees low and affordable. Saving Alma Mater thus calls for the partial deregulation of public universities and a phase-out of their state appropriations. Garland's plan would tie university revenues to their performance and exploit the competitive pressures of the academic marketplace to control costs, rein in tuition, and make schools more responsive to student needs. A much-needed

blueprint for reform based on Garland's real-life successes as the head of Miami University of Ohio, Saving Alma Mater will be essential for anyone concerned with the costs and quality of higher education in America today.

"Many cities have a rich past. No one knows if many have a future"
Richard C. Longworth
Caught in the Middle,
2007, p. 28 "In the last six decades, no stagnant or decaying city has been

globally or significantly saved - never" David H. McDonald "More and more, federal and state governments are growing their already out-of-control financial problems. Cities are on their own to sink or swim, now more than ever"
David H. McDonald "Only two states in the nation have, over time, lost population. If the states are gaining population but the cities are losing, then it is the cities' fault" David H. McDonald
"Occasionally a city will, usually by accident, 'back

into' attempting growth in the right manner. It always works" David H. McDonald "Virtually no city has a workable vision of how to even achieve stability - let alone a return to vibrancy. This book presents such a vision and a clear path to beginning the process of stabilization and growth"
David H. McDonald
"Whatever is going to save your cities, it won't be government. Both political parties are largely trapped in the past, driven by a desire to protect old sacred cows"

It's the Classroom, Stupid
 Stanford University Press
 Our educational system is in a continuous state of reform, yet outcomes are nowhere near what we can accept. Though the search for answers is perpetual, many efforts over the past decade have homed in on one feature of high schools--their size. If we simply reduce school size, the argument goes, students will gain a safer environment that can address their individual needs. It seems like common sense, but such

changes alone have not proven a magic bullet. Saving America's High Schools offers quantitative research drawn from large-scale reform studies along with recommendations for federal, state, and district reform.

Barrio America Random House
 Education affects these two dimensions in distinct ways, influencing democratic enlightenment through cognitive proficiency and sophistication, and political engagement

through position in social networks. For characteristics of enlightenment, formal education simply adds to the degree to which citizens support and are knowledgeable about democratic principles. The U.S. Technology Skills Gap University of Chicago Press

This book presents a bold, unconventional plan to rescue our nation's schoolchildren from a failing public education system. The plan reflects the author's rare fusion of on-the-ground experience as school board member, public administrator and

political activist and exhaustive policy research. The causes of failure, Hettleman shows, lie in obsolete ideas and false certainties that are ingrained in a trinity of dominant misbeliefs. First, that educators can be entrusted on their own to do what it takes to reform our schools. Second, that we need to retreat from the landmark federal No Child Left Behind Act and restore more local control. And third, that politics must be kept out of public education.

In this unique and contemporary work on American politics, college student, author, and poet Justin Trask Haskins investigates the problems gripping our nation today. Political topics include immigration reform, social security, separation of church and state, the international crisis in the Middle East, the American education problem, and many other topics as well. Haskins uses his impressive writing ability and unique opinions to

captivate the mind and bring fresh perspectives to our modern day problems.

Saving the School

Macmillan

Each book includes a 15 gift card from DonorsChoose.org to give to a classroom in need. The American public school system is in crisis, failing millions of students, producing as many drop-outs as graduates, and threatening our economic future. By 2020, the United States will have 123 million high-skill jobs

to fill -- and fewer than 50 million Americans qualified to fill them. Educators, parents, political leaders, business people, and concerned citizens are determined to save our educational system. Waiting for "Superman" offers powerful insights from some of those at the leading edge of educational innovation, including Bill and Melinda Gates, Michelle Rhee, Geoffrey Canada, and more. Waiting for "Superman" is an inspiring call for reform

and includes special chapters that provide resources, ideas, and hands-on suggestions for improving the schools in your own community as well as throughout the nation. For parents, teachers, and concerned citizens alike, *Waiting for "Superman"* is an essential guide to the issues, challenges, and opportunities facing America's schools. *Political Agendas for Education* Bloomsbury Publishing USA
In *Smart Kids, Bad Schools*, award-winning

author and educator Brian Crosby draws on his twenty years as a high school English teacher to offer a candid appraisal of why our schools are failing and what we must do to save them. Crosby's no-holds-barred critique of the broken education system leaves no stone unturned: he is unapologetic and uncompromising in his exposé of how teachers, administrators, unions, and parents all play a part in this national tragedy. Crosby offers 38 ideas to save America's future and

his proposed remedies are revolutionary. He recommends bold measures, such as lengthening the school day and school year, forcing parents to volunteer at schools, abolishing homework, outlawing teachers unions, and cutting special education funding. The result is a book that is likely to inflame passions on all sides of the political spectrum, and, in the process, introduce new ideas to a debate that is in dire need of them. *Saving America's High*

Schools University of Chicago Press
Winner of the Bancroft Prize In twenty-first-century America, some cities are flourishing and others are struggling, but they all must contend with deteriorating infrastructure, economic inequality, and unaffordable housing. Cities have limited tools to address these problems, and many must rely on the private market to support the public good. It wasn't always this way. For almost three decades after World War

II, even as national policies promoted suburban sprawl, the federal government underwrote renewal efforts for cities that had suffered during the Great Depression and the war and were now bleeding residents into the suburbs. In *Saving America's Cities*, the prizewinning historian Lizabeth Cohen follows the career of Edward J. Logue, whose shifting approach to the urban crisis tracked the changing balance between government-

funded public programs and private interests that would culminate in the neoliberal rush to privatize efforts to solve entrenched social problems. A Yale-trained lawyer, rival of Robert Moses, and sometime critic of Jane Jacobs, Logue saw renewing cities as an extension of the liberal New Deal. He worked to revive a declining New Haven, became the architect of the "New Boston" of the 1960s, and, later, led New York State's Urban Development Corporation,

which built entire new towns, including Roosevelt Island in New York City. Logue's era of urban renewal has a complicated legacy: Neighborhoods were demolished and residents dislocated, but there were also genuine successes and progressive goals. *Saving America's Cities* is a dramatic story of heartbreak and destruction but also of human idealism and resourcefulness, opening up possibilities for our own time.

Education and Democratic

Citizenship in America
University of Chicago Press

The purpose of this book is to save public education from fragmenting into an array of alternative learning endeavors generated by dissatisfied parents, students, financial opportunists and critics--all in meaningful responses to a system that is perceived as failing a large number of students.

Saving America's Cities
Simon and Schuster

From David Osborne, the

author of *Reinventing Government*--a biting analysis of the failure of America's public schools and a comprehensive plan for revitalizing American education. In *Reinventing America's Schools*, David Osborne, one of the world's foremost experts on public sector reform, offers a comprehensive analysis of the charter school movements and presents a theory that will do for American schools what his New York Times bestseller *Reinventing Government* did for public governance in 1992. In

2005, when Hurricane Katrina devastated New Orleans, the city got an unexpected opportunity to recreate their school system from scratch. The state's Recovery School District (RSD), created to turn around failing schools, gradually transformed all of its New Orleans schools into charter schools, and the results are shaking the very foundations of American education. Test

scores, school performance scores, graduation and dropout rates, ACT scores, college-going rates, and independent studies all tell the same story: the city's RSD schools have tripled their effectiveness in eight years. Now other cities are following suit, with state governments reinventing failing schools in Newark, Camden, Memphis, Denver, Indianapolis, Cleveland,

and Oakland. In this book, Osborne uses compelling stories from cities like New Orleans and lays out the history and possible future of public education. Ultimately, he uses his extensive research to argue that in today's world, we should treat every public school like a charter school and grant them autonomy, accountability, diversity of school designs, and parental choice.
