Value-added tax, or VAT, first introduced
less than 50 years ago, is now a pivotal
component of tax systems around the
world. The rapid and seemingly irresistible
rise of the VAT is probably the most
important tax development of the latter
twentieth century, and certainly the most
breathtaking. Written by a team of experts

from the IMF, this book examines the
remarkable spread and current reach of
the innovative tax and draws lessons
about the design and implementation of
the VAT, as experienced by different
countries around the world. How efficient
is it as a tax, is it fair, and is it suitable for
all countries? These are among the
questions raised. This highly informative
and well-researched book also looks at the
likely future of the tax.

"To explain the logic of these
arrangements, the author draws on the

analytical resources of industrial
economics and the theory of contracts. He
addresses the winner-take-all character of
many creative activities that brings wealth
and renown to some artists while dooming
others to frustration; why the "option"
form of contract is so prevalent; and why
even savvy producers get sucked into
making "ten-ton turkeys," such as
Heaven's Gate."--BOOK JACKET.

Bringing together case studies and theory, this book is the first in-depth qualitative study of student migration within Europe. Drawing on the theory of 'the stranger' as a sociological type, the author suggests that the travelling European students can be seen as a new migratory elite. The book presents the narratives of travelling students, explains their motivations, the effects of movement into a new social and cultural context, the problems of adaptation, and describes the construction of social networks, and the process of adaptation to new cultures.

Con este libro usted aprenderá a integrar los sistemas de reducción de costos que han revolucionado la manufactura: Objetivos de Costo (Target Costing) y

Mejora Continua en Costos (Kaizen Costing). En la fase del desarrollo y diseño de productos nuevos se utiliza Objetivos de Costo, un método que se enfoca en la realización de ganancias al lograr fabricar productos de calidad a partir de las fases de diseño y evaluación. La "Mejora Continua en Costos" le ayuda a disminuir el costo de producción de los productos que ya usted tiene en existencia. La combinación de los dos métodos le lleva a un sistema completo de reducción de costos, el cual se puede implementar desde la inyección del producto hasta el final del ciclo.

This text allows students to synthesize various functions of accounting into the big picture. Instead of focusing on the elements of accounting in theory and research, it combines them into a coherent whole for students. Therefore, the text takes information students already know and organizes it into a form they can easily use in business.

Tools and Techniques for Determining the Value of Any Asset South-Western Pub With this text students will see that there is more than one side to every accounting

issue, that today's accounting profession has its roots in a history worth knowing, and that there is an inextricable link between accounting theory and actual procedures. Accounting Theory clearly and systematically looks at the pros and cons of accounting issues, discussing the theory and procedures. This second edition has four new chapters covering pensions and deferred income tax, business combinations and consolidated financial statements, and has been updated to cover all new FASB Statements to May 1989.

An International Encyclopedia Elsevier Wind Forces in Engineering, Second Edition covers the various aspects, principles, and engineering applications of wind forces. This book is composed of 10 chapters and starts with an introduction to the history of wind forces. The subsequent chapters consider the wind speeds for various topographies; particular "shape factors" for general and special structures; oscillatory wind forces of a random or single-frequency type; and the dynamic response of structures to oscillatory wind forces. Other chapters deal with specific structures, such as buildings, bridges,

towers, radar antennas, for static and dynamic wind loadings. The final chapter provides the Code of Practice which has been republished since 1972, including those for Australia, Canada, Great Britain and the U.S.A. These codes do not provide similar responses and are all essentially in a transitional state between the old static force concept and an improved statistical analysis to be based on more experimental evidence. This book will prove useful to engineers and researchers. *Handbook on Problem-based Learning* "O'Reilly Media, Inc."

This book examines various aspects of changes to business behavior through the lenses of the "twin pillars" of sustainability – responsibility and governance. It discusses whether the focus of corporate social responsibility has changed so much that we need to think about redefinitions of key concepts in the field, and analyses both the theory and practice in a variety of ways to enable conclusions to be drawn about the changes needed to any definitions. This approach is based on the tradition of the Social Responsibility Research Network, which in its 15-year history has sought to broaden the

discourse and to treat all research as inter-related and relevant to business. This book consists of the best contributions from the 16th International Conference on Corporate Social Responsibility and 7th Organisational Governance Conference held in Derby, United Kingdom in August/September 2017.

How can management be developed to create the greatest wealth for society as a whole? This is the question Peter Drucker sets out to answer in *Innovation and Entrepreneurship*. A brilliant, mould-breaking attack on management orthodoxy it is one of Drucker's most important books, offering an excellent overview of some of his main ideas. He argues that what defines an entrepreneur is their attitude to change: 'the entrepreneur always searches for change, responds to it and exploits it as an opportunity'. To exploit change, according to Drucker, is to innovate. Stressing the importance of low-tech entrepreneurship, the challenge of balancing technological possibilities with limited resources, and the organisation as a learning organism,

he concludes with a vision of an entrepreneurial society where individuals increasingly take responsibility for their own learning and careers. With a new foreword by Joseph Maciariello

This is the Proceedings of the Eighth International Conference on Management Science and Engineering Management (ICMSEM) held from July 25 to 27, 2014 at Universidade Nova de Lisboa, Lisbon, Portugal and organized by International Society of Management Science and Engineering Management (ISMSEM), Sichuan University (Chengdu, China) and Universidade Nova de Lisboa (Lisbon, Portugal). The goals of the conference are to foster international research collaborations in Management Science and Engineering Management as well as to provide a forum to present current findings. A total number of 138 papers from 14 countries are selected for the proceedings by the conference scientific committee through rigorous referee review. The selected papers in the second volume are focused on Computing and Engineering Management covering areas

of Computing Methodology, Project Management, Industrial Engineering and Information Technology.

Focused on Computing and Engineering Management Routledge Innovation and Entrepreneurship 3rd Edition is an accessible text on innovation and entrepreneurship aimed specifically at undergraduate students studying business and management studies, but also those on engineering and science degrees with management courses. The text applies key theories and research on innovation and entrepreneurship and then reviews and synthesises those theories and research to apply them in a much broader and contemporary context, including the corporate and public services, emerging technologies and economies, and sustainability and development and creating and capturing value from innovation and entrepreneurship. In this third edition the authors continue to adopt an explicit process model to help organise the material with clear links between innovation and entrepreneurship. This text has been designed to be fully integrated with the Innovation Portal at www.innovation-portal.info, which contains

an extensive collection of additional resources for both lecturers and students, including teaching resources, case studies, media clips, innovation tools, seminar and assessment activities and test questions.

Written by two experienced lecturers, this is the first student-centered textbook to bridge the technical and theoretical aspects of management accounting change. Packed full of pedagogical features, including mini-cases, learning outcomes, key terms, article summaries, key concept boxes, real-world cases, chapter summaries and further reading suggestions and resources, it is clear and accessibly written, covering all the major emerging topics in management accounting theory. Discussing technical developments in management accounting from conventional cost accounting to contemporary strategic management accounting and beyond, in four parts it: shows how conventional cost accounting techniques and management control models evolved in line with the development of mass production and bureaucracy explores how recent

developments such as customer and strategic orientations in business, flexible manufacturing, post-bureaucracy, network and virtual organizational technologies implicate in management accounting provides a number of alternative theories through which the transition of management accounting from mechanistic to post-mechanistic approaches can be explained – elaborating both rational and interpretive/critical theories. This excellent text meets a desperate need for an advanced management accounting textbook that incorporates theory and practice and is accessible and engaging for all those studying in this challenging area.

Collecting data is relatively easy, but turning raw information into something useful requires that you know how to extract precisely what you need. With this insightful book, intermediate to experienced programmers interested in data analysis will learn techniques for working with data in a business environment. You'll learn how to look at data to discover what it contains, how to capture those ideas in conceptual models, and then feed your understanding back into the organization through business plans, metrics dashboards, and other applications. Along the way, you'll experiment with concepts through hands-on workshops at the end of each chapter.

Above all, you'll learn how to think about the results you want to achieve -- rather than rely on tools to think for you. Use graphics to describe data with one, two, or dozens of variables Develop conceptual models using back-of-the-envelope calculations, as well as scaling and probability arguments Mine data with computationally intensive methods such as simulation and clustering Make your conclusions understandable through reports, dashboards, and other metrics programs Understand financial calculations, including the time-value of money Use dimensionality reduction techniques or predictive analytics to conquer challenging data analysis situations Become familiar with different open source programming environments for data analysis "Finally, a concise reference for understanding how to conquer piles of data."--Austin King, Senior Web Developer, Mozilla "An indispensable text for aspiring data scientists."--Michael E. Driscoll, CEO/Founder, Dataspora **Includes Pearson EText** Elsevier Business scandals are always with us from the South Sea Bubble to Enron and Parmalat. As accounting forms a central

element of any business success or failure, the role of accounting is crucial in understanding business scandals. This book aims to explore the role of accounting, particularly creative accounting and fraud, in business scandals. The book is divided into three parts. In Part A the background and context of creative accounting and fraud is explored. Part B looks at a series of international accounting scandals and Part C draws some themes and implications from the country studies.
