History for the IB Diploma Paper 3 The People's Republic of China (1949-2005) Cambridge University Press

The 2013 IB HL Economics syllabus change introduced Paper 3, an essentially calculations-based assessment. This development challenged teachers and students alike, as few Paper 3 practice resources have been available. This is furthermore an area of the syllabus where, as in Mathematics, practice is fundamentally important in developing the skills and confidence for needed for success. Paul Hoang's latest publication therefore represents an invaluable resource in helping students to prepare for the examination challenges they face. For many candidates the mix of words, theory and numbers in Paper 3 questions can be overwhelming, if they have not developed

easy familiarity throughout their course. With clear layout and content that beautifully mirrors IB examination questions, this resource is the one we have all been waiting for. I absolutely recommend it as a 'must have' for all those who are preparing for the HL Economics examination. IT is a core resource invaluable to students and teachers alike. Janet Barrow, IB Economics Teacher, OSC Teacher, IB Examiner, author of IB Business Management and TOK teacher resources 20160615 Cambridge University Press

Massive changes are taking place in society surrounding the delivery of

information to individuals and the way they process this information. At work, at home, and in schools, the Internet and the World Wide Web are altering the individual's work, his leisure time, her workplace, and their educational environments. All of these changes and their consequences have traditionally been investigated largely within the domain of sociology, semiotics, mass communication, and computer science. The perspective from cognitive psychology has been lacking. The purpose of this volume is to fill this gap. The focus of the book is the cognitive effects of the modern digital environment. In addition, questions are raised about what cognitive conditions must exist for adequately processing information in multimedia environments. Internet use routinely involves the exchange of factual information but also a large amount of information with an interpersonal character is communicated. A socio-psychological perspective is needed to understand both kinds of communication, also to be able to design appropriate support tools. In *Cognition in a Digital World*, the emphasis is on the psychological analysis of interactive and

continuing communication and discourse, rather than on the technical aspects of the individual's interaction at the interface. The three main themes of this volume are: *conditions and consequences of multimedia information processing by the individual; *socio-psychological characteristics of information transfer over the World Wide Web; and *analysis of computer-mediated collaborative communication. *Cognition in a Digital World* will be of interest to a wide audience of researchers and students in the fields of cognitive science, education, communication sciences, computer science and the arts (discourse analysis). **History for the IB Diploma: The Cold War and the Americas 1945-1981** Cambridge University Press Stretch your students to achieve their best grade with these year round course companions; providing clear and concise explanations of all syllabus requirements and topics, and practice questions to support and strengthen learning. - Consolidate revision and support learning with a range of exam practice questions and concise and accessible revision notes - Practise exam technique with tips and trusted guidance from examiners on how
