where  $p_0 = \hbar m \omega$  and  $x_0 = \hbar / m \omega$ , are the basic momentum and length scales. From now on, we will give the energy in units of  $\hbar \omega$ ,  $x$  in units of  $x_0$ , and  $p$  in units of  $p_0$ , so the reduced Hamiltonian is  $H_0 = p^2/2 + x^2/2$ . In these units the commutation relation is  $[x, p] = i$ . Quantum Mechanics using Matrix Methods Matrix mechanics is a formulation of quantum mechanics created by

Werner Heisenberg, Max Born, and Pascual Jordan in 1925. It was the first conceptually autonomous and logically consistent formulation of quantum mechanics. Its account of quantum jumps supplanted the Bohr model's electron orbits. Matrix mechanics - Wikipedia This book is about the matrix formulation of quantum mechanics that Heisenberg developed. The first half

of the book is all about understanding one of most important equations of quantum mechanics:  $QP - PQ = i\hbar/2\pi$ ; to do so the author introduces complex numbers, matrices, vectors and probability.
