Excerpt: The Nikon F2

is a professional level,

interchangeable lens,

35 mm film, single-lens

reflex (SLR) camera. It

was manufactured by

the Japanese optics

company Nippon

Kogaku K. K. (Nikon

Corporation since

1988) in Japan from

September 1971 to

June 1980. It used a

horizontal-travel focal plane shutter with titanium shutter curtains and a speed range of 1 to 1/2000th second (up to 10 seconds using the self timer) plus Bulb and Time, and flash X-sync of 1/80th second. It had dimensions (with DE-1 head, see below) of 98 mm height, 152.5 mm width, 65 mm depth and 730 g weight. It was available in two colors: black with chrome trim and all black. The F2 is the second member of the long line of Nikon F-series professional level 35 mm SLRs that began with the Nikon F (manufactured 1959-1974) and followed each other in a sort of dynastic succession as the top-of-the-line Nikon camera. The other members were the F3

(1980-2001), F4 (1988-1996), F5 (1996-2005) and F6 (2004-present). The F-series do not share any major components, All Nikon professional F-series SLRs are full system cameras. This means that each camera body serves as only a modular hub. The Nikon F2 is an all-metal, mechanically (springs, gears, levers) controlled, manual focus SLR with manual exposure control. It was completely operable without batteries. The F2 was the replacement for Nikon F. It did introduce many new features (a faster 1/2000th second maximum shutter speed, a swing open back for easier...

 Autofocus changed the

way photos are taken, making it easier to capture and keep the subject in sharp focus. Since autofocus was first introduced, it has become much more complicated, offering different focus modes, focus types, and focus points. What started out as a way to simplify the photo-making process has turned into a complicated endeavor with numerous choices and settings. A *Photographer's Guide to Focus and Autofocus: From Snapshots to Great Shots* is here to answer all your questions about the focusing system in today's cameras and their various autofocus modes. Photographer Alan Hess covers the simple basics of focus: manual focus versus

autofocus, the best focus modes to use, and how focus works in both DSLRs and mirrorless cameras. Then he discusses more advanced topics, including autofocus sensor types, back-button autofocus, and focus for DSLR video. There is much more to autofocus, and focus in general, than just pushing the shutter release button and hoping the image is sharp and in focus. With this book, you'll learn how to get the right focus in your images, no matter what the occasion. Follow along with your friendly and knowledgeable guide, and you will: Learn the top ten things to know about focus, including how to use the focus controls on the camera, how to pick

the autofocus point, and when to use pre-focus in your images

Address common autofocus issues such as dealing with low contrast or low light, or shooting through obstacles like glass or a fence

Develop troubleshooting techniques for what to do when the autofocus doesn't work properly

Work with both manual focus and autofocus and learn tricks to achieve better focus in video
