The first edition of Pharmacy Practice Research Methods provided a contemporary overview of pharmacy practice research, discussing relevant theories, methodologies, models and techniques. It included chapters on a range of quantitative, qualitative, action research and mixed methods as well as management theories underpinning change in pharmacy practice. This new edition of the book is much broader and more diversified. It includes the quality improvement methods in pharmacy practice research, focusing on the key differences between high and low-income countries with regard to pharmacy practice research, as well as the main challenges faced when conducting such research – areas of significant global interest. In addition, a number of the chapters covering fast-moving fields where new methods have been developed and published have been updated. Featuring seven new topics and presenting future trends, the book also explains in detail methods used in covert

and overt observations in pharmacy practice, as well as methods involved in realist research, which are important to countries seeking to produce evidence-based information in this area.

Die deutschen öffentlichen Apotheker befinden sich in einer sehr schwierigen, aber auch entscheidenden Phase der Neuausrichtung ihres Berufs. Professionssoziologisch stellt sich hierbei insbesondere die Frage, ob der Offizin-Apotheker bei seiner bisherigen Tätigkeit nur eine Art Assistenzberuf des Arztes ist, der außer in der Logistik und der Herstellung von Arzneimitteln ohne Genehmigung des Arztes heilberuflich nicht eigenständig tätig sein darf? Das Buch zeigt Wege auf, den öffentlichen Apotheker als vollwertigen Heilberufler in enger Zusammenarbeit mit dem Heilberufler Arzt eine Mitverantwortung dafür übernehmen zu lassen, dass jeder Patient für seine diagnostizierte Erkrankung die medizinisch und unter Kosten-Nutzen-Aspekten optimale Medikation in korrekter Dosierung erhält. Zum ersten Mal werden hierfür auch die Theorien des französischen Philosophen Michel Foucault (1926-1984) auf die deutsche öffentliche Apotheke angewandt.

[Truncated abstract] Collaboration in primary healthcare has been acknowledged by Governments and healthcare providers as important to improve continuity of care and chronic disease management (CDM) in the community. Collaboration between primary healthcare professionals has been shown to be a complex and poorly understood process that has not reached its potential. There has been only limited investigation of collaborative CDM in primary healthcare, with scant study of the underutilisation of community pharmacists (CPs) in the delivery of collaborative CDM. This study examined the research question How can collaboration between GPs and CPs be improved to help CDM in primary healthcare reach its potential? A grounded theory methodology was employed to address the question. The substantive theory developed was based on data collected and analysed from semi-structured, one-on-one interviews with GPs (n=22) and CPs (n=22) and four consumer focus groups (n=25). There has been little investigation of the GP/CP relationship, especially in the context of collaborative primary healthcare. In the present study, the GP/CP relationship is presented as the central focus of GP/CP collaboration. The substantive theory of GP/CP collaboration that was produced has as its core phenomenon the need for a shared belief in positive patient outcomes between GPs, CPs and consumers. Crucial to the development of the core phenomenon were three main categories that interact with each other and act as barriers to the development of good GP/CP relationships and thus GP/CP collaboration. The three barriers were found to be power distance, unclear definition of roles and logistical factors unique to the primary healthcare environment. On the basis of this finding, strategies were developed to overcome the barriers and improve the likelihood of the development of a shared belief in the potential for collaborative CDM to achieve positive patient outcomes. The strategies suggested by the professional interviewees (GPs, CPs) to control power distance were raising GP awareness to the improved CP CDM capabilities and skill set through both top-down and bottom-up approaches. CPs believed their skills in managing the patient-centred service model need to be improved, along with their ability to develop strong GP/CP relationships to better engage GPs in collaboration. Finally, a stronger CP/consumer relationship could be further utilised as an avenue for CPs to demonstrate to GPs the benefits CPs offer when they are included in patient management. The professional

interviewees believed that improving GP/CP role negotiation to establish firm CDM roles and responsibilities would decrease GP concerns regarding fragmentation of collaborative patient care. Significantly, GP fears around medico-legal culpability and decreased patient benefits need to be minimised. Thus there is a need for CPs to formalise their role as healthcare professionals and not as retailers when collaborating with GPs. Consumers were also largely unaware of CPs CDM expertise, however they responded positively to the prospect of CPs delivering CDM... Models and Frameworks for Implementing Evidence-Based Practice Springer

This accessible and comprehensive book provides the thorough understanding of this discipline that will be needed for practising pharmacists and students to develop into effective public health practitioners. The role of pharmacists in improving the general health of the public is developing rapidly, directed by changes to health policy in the UK and elsewhere. Often the focus of the pharmacist is necessarily on individual patients, but the importance of pharmacy practice in population health should not be underestimated. Pharmacy in Public Health focuses on the important topics in public health relevant to all pharmacists. Case studies are used throughout the text to illustrate how public health initiatives can be implemented in different pharmacy sectors. Specific key concepts are outlined, including: determinants of health; pharmacy within public health: UK and international perspective; needs assessment and public involvement; evidence-based delivery; risks and benefits; health education opportunities; health protection; developing pharmacy services and preventing disease; medicines management.

Australia's health system functions remarkably well, despite operating under a complex set of institutions that make coordinating patient care difficult. Australia should adopt a national approach through an enhanced federal government role in steering policy, funding and priority setting.

The Evidence-Based Nursing Series is co-published with Sigma Theta Tau International (STTI). The series focuses on implementing evidence-based practice in nursing and mirrors the remit of Worldviews on Evidence-Based Nursing, encompassing clinical practice, administration, research and public policy. Models and Frameworks for Implementing Evidence-Based Practice: Linking Evidence to Action looks at ways of implementing evidence gained through research and factors that influence successful implementation. It acknowledges the gap that exists between obtaining evidence and the practicalities of putting it into practice and provides direction to help to close this gap. This, the first book in the series, helps the reader to make decisions about the appropriateness of using various models and frameworks. A selection of models and frameworks are examined in detail including examples of their use in practice. The book concludes with an analysis and synthesis of the included models and frameworks. The models and frameworks that have been included are based on a number of criteria: that they are internationally recognised, have undergone widespread evaluation and testing, are transferable across different settings, and can be used by different disciplines. Models and frameworks include: Stetler Model Ottawa Model of Research Use IOWA model of evidence-based practice Advancing Research and Clinical Practice through Close Collaboration (ARCC) model Dobbins' dissemination and use of research evidence for policy and practice framework Joanna Briggs Institute model Knowledge to Action framework Promoting Action on Research Implementation in Health Services (PARIHS) Key Points: Includes an overview of implementation issues and the use of theory and frameworks in implementing evidence into practice Chapters are written by the developers of the model or framework Each chapter provides background on an implementation model or framework, suitable applications, underlying theory and examples of use Each chapter examines strengths and weaknesses of each model alongside barriers and facilitators for its implementation *Clinical Reasoning* John Wiley & Sons
