Slim, reliable and easy to use, The Pocket Rough Guide to Istanbul will be your indispensable

travel companion. *TomTom Springer* This book is the fourth edition of a highly practical guide to the leading cases in European Competition Law. It explores the application of Article 101 TFEU, Article 102 TFEU and the European Merger Regulation, as well as the public and private enforcement of Competition Law. In addition, it reviews the intersection between Competition Law and Intellectual Property Rights and the application of Competition Law to State action. Each chapter outlines the relevant laws, regulations and guidelines for each topic. Within this framework, cases are reviewed in summary form, accompanied by analysis and

commentary. "This book should be in the library of every competition law practitioner and academic. The summary of cases is first class. But what makes it really stand out is the quality of the commentary and the selection of the material which includes not only the most important European judgements and decision but also some of the leading cases from the US and European Member States." Ali Nikpay, Gibson, Dunn & Crutcher "The study of EU Competition law requires the analysis and understanding of a number of increasingly complex and lengthy European Commission and European Court decisions. Through the provision of case

summaries, excerpts from the important passages and concise commentary linking these decisions to other key case law and Commission documents, this unique and impressive book provides the student and practitioner of EU competition law with an extremely clear and useful introduction to these leading decisions." Dr Kathryn McMahon, Associate Professor, School of Law, University of Warwick "The Guide is an invaluable tool for both students and practitioners. It provides a compact overview on the fundamental cases and highlights the essential problems in a clear and sharp analysis." Dr Christoph Voelk, Antitrust Practice Group, McDermott, Will

& Emery LLP, Brussels  
"This edition will be especially valuable to competition law specialists abroad who are interested in the jurisprudence and policy of the European Union and its member states. Familiarity with the European regime is essential for proficiency in competition law today, and this volume provides an excellent foundation." William E Kovacic, Global Competition Professor of Law and Policy, George Washington University Law School, Former Chairman, US Federal Trade Commission "A perfect reference for students of competition law, giving them a kick start when searching for EU case law on a specific subject." Magnus Strand, University of

Uppsala, Sweden

This new volume updates the groundbreaking analysis of its first edition in 2002, when the EC common regulatory framework for electronic communications networks and services had just entered into force. So much has changed in the intervening years that that this new edition bears little resemblance to its predecessor, with every chapter either extensively altered or entirely new. It remains, however, the most detailed and comprehensive overview available of the application of the EC Treaty's competition rules in

the markets for telecommunications and audiovisual media, and of the applicable regulatory framework. In thirteen chapters, each contributed by one or more noted legal authorities in the field, the second edition of EC Competition and Telecommunications Law covers the full range of EC telecommunications law across all major areas of both institutional and substantive law, both on the international and EC levels, including the following: State aid; the merger control regulation; justification for sector-specific regulation in EC competition law; network access; authorizations and privileges; and mobile telephony. Relevant EC

media and communications law and relevant aspects of EC competition law are dealt with in detail. While some chapters focus on competition law, others deal primarily with sector-specific regulation. There is practical guidance throughout on procedural matters, alongside analysis of the substantive provisions. Well-known in its first edition, this thoroughly revised and updated version continue to be vital reading for practitioners, in particular those specializing in European competition law and for company and in-house lawyers who are seeking advice on how European law affects their business. As a detailed analysis of the basic legislative

and regulatory framework of European telecommunications law, it will be an invaluable reference work for lawyers, judges, regulators, and policymakers in all the EC Member States, as well as for students and teachers of European law.

Competition policies

have long been based on a scholarly tradition focused on static models and static analysis of industrial organisation. However, recent developments in industrial organisation literature have led to significant advances, moving beyond

traditional static models and a preoccupation with price competition, to consider the organisation of industries in a dynamic context. This is especially important in the field of information and communication technology (ICT) network industries where competition centres on network effects, innovation and intellectual property rights, and where the key driver of consumer benefit is technological progress.

Consequently, when an antitrust intervention is contemplated, a number of considerations that arise out of the specific nature of the ICT sector have to be taken into account to ensure improved consumer welfare. This book

considers the adequacy of existing EU competition policy in the area of the ICT industries in the light of the findings of modern economic theory. Particular attention is given to the implications of these dynamic markets for the competitive assessment and treatment of the most common competitive harms in this area, such as non-price predatory practices, tying and bundling, co-operative standard setting, platform joint ventures and co-operative R&D.

There's only one rule:

Never lock the door  
Gianna believes  
manual labor to be  
penance for the  
mistake that changed  
her life. Nothing can be  
worse than serving  
probation under the  
supervision of a bitter,  
elderly woman, known  
as the Caretaker,  
running a bed and  
breakfast in the middle  
of the Arizona desert.  
Then the strangers  
begin arriving. They  
appear every night at  
sundown at the end of  
the driveway and  
vanish early in the  
morning, armed men  
and women who don't  
quite look or act  
normal and never  
travel in vehicles,  
despite the property  
being twenty miles  
from town. Where they  
come from baffles  
Gianna, as does the  
single rule the  
Caretaker gives her.

The front door must  
remain unlocked and  
the house accessible to  
the dangerous visitors  
no matter how unusual  
or frightening they are.  
When one of them  
arrives wounded,  
Gianna helps save him  
and unknowingly  
makes a powerful  
friend, one from a very  
faraway place. In fact,  
from another world  
entirely, the world that  
starts at the end of the  
driveway. Before she  
can learn more, Gianna  
is left alone with the  
strangers and must  
choose whether she'll  
take over the  
Caretaker's role as  
hostess or return to  
New York and risk jail  
time for violating her  
probation. Gianna  
defies the Caretaker  
and locks the front  
door instead. Her world  
will never be the same.  
Includes both novellas.

Edward Elgar

This book addresses the question of how competition authorities assess mergers in the Information

Communication

Technology (ICT)

sector so as to promote competition in innovation. A closer look at the question reveals that it is far more complex and difficult to answer for the ICT,

telecommunications and multi-sided

platform (MSP)

economy than for more traditional sectors of the economy. This has

led many scholars to re-think and question whether the current merger control

framework is suitable for the ICT sector, which is often also referred to as the new economy. The book

pursues an

interdisciplinary approach combining insights from law, economics and corporate strategy.

Further, it has a comparative dimension, as it discusses the practices of the US, the EU and, wherever relevant, of other competition authorities from around the globe.

Considering that the research was conducted in the EU, the practices of the European Commission remain a key aspect of the

content. Considering its normative dimension, the book concentrates on the substantive aspects of merger control. To facilitate a better understanding of the most important points, the book also offers a brief overview

of the procedural aspects of merger control in the EU, the US and the UK, and discusses recent amendments to Austrian and German law regarding the notification threshold. Given its scope, the book offers an invaluable guide for competition law scholars, practitioners in the field, and competition authorities worldwide.
