Gifted students can  
exhibit extreme variance  
in both their abilities and  
their interests, yet they  
are often treated within

schools as one  
homogeneous, specialized  
population. Personalized  
Learning in Gifted  
Education helps educators  
strengthen their  
differentiation of both  
instruction and services  
for advanced students.  
This book: • helps  
educators develop the  
specific gifts and talents  
of the gifted students they  
serve • includes a year-  
long plan for professional

learning communities  
seeking to transform their  
programs • demonstrates  
how educators can utilize  
the wealth of data they  
have at their disposal •  
provides a rationale and  
blueprint for a stronger,  
more personalized  
approach to gifted  
education • offers  
suggestions for both  
elementary and  
secondary schools.

around five features of personalized learning: personalized learning plans, project- or problem-based learning, competency-based progression through the curriculum, criterion-referenced assessments, and multi-year mentoring. *ENC Focus* Springer Science & Business Media MSEC2011 is an integrated conference concentrating its focus upon Multimedia ,Software Engineering, Computing and Education. In the proceeding, you can learn much more

knowledge about Multimedia, Software Engineering ,Computing and Education of researchers all around the world. The main role of the proceeding is to be used as an exchange pillar for researchers who are working in the mentioned field. In order to meet high standard of Springer, AISC series ,the organization committee has made their efforts to do the following things. Firstly, poor quality paper has been refused after reviewing course by anonymous referee

experts. Secondly, periodically review meetings have been held around the reviewers about five times for exchanging reviewing suggestions. Finally, the conference organization had several preliminary sessions before the conference. Through efforts of different people and departments, the conference will be successful and fruitful. **Teaching Students in Inclusive Settings** R & L Education

Concerns about quality mathematics education are often posed in terms of the types of mathematics that are worthwhile and valuable for both the student and society in general, and about how to best support students so that they can

develop this mathematics. Concerns about equity are about who is excluded from the opportunity to develop quality mathematics within our current practices and systems, and about how to remove social barriers that systematically disadvantage those students. This collection of chapters summarizes our learning about the achievement of both equity and quality agendas in mathematics education and to move forward the debate on their importance for the

field.

What is the animating 'spirit' behind what may appear to be the coldly calculating world of

markets and business enterprise? Though often mathematically modelled in dry terms, markets can be looked at instead as meaningful domains of human activity. To economists, markets have been seen as nothing but objective 'forces' or allocation 'mechanisms'. This book, however, argues that they can be seen as involving the

human spirit, personal expression and moral commitments. It presents the view that markets are not so much things that need to be measured as meanings that need to be narrated and interpreted. The aim of this book is to introduce two scholarly fields to one another, economics and cultural studies, in order to pose the question: how does

culture matter to the economy? When we look at the economy as a legitimate domain of culture, it transforms our understanding of the nature of business life. By viewing markets as an integral part of our culture, filled with the drama of human creativity, we might begin to better appreciate their role in the world.
