[The Hack Mechanic Guide to European Automotive Electrical Systems](#) Chilton Book Company

In the long and exciting history of the American automobile business one name stands out above others: Packard! For

many years the cars produced by the Packard Motor Car Company were considered the best; a line of sedans, coupes, convertibles and limousines in a wide variety of factory body styles and a seemingly endless array of Custom coachwork. It wasn't because they were the most costly; a Duesenberg cost more. And it wasn't because they were the fastest; Stutz usually took that honor. The reason why Packard was so universally admired was because they built an entire range of luxury cars that were fast, sleek, luxurious, stylish, tasteful, wonderfully quiet, durable, reliable and rode well. Packard combined the finest attributes luxury buyers wanted in one beautiful package, and built them with pride. Packard quality was legendary, its engineering

considered among the best in the world. And they were built by a company that was known as one of the best-run businesses in the world, solid, profitable, conservative and dependable. Packard stock was the envy of the market, its management was widely admired. Packards, it was sometimes said, were built by gentlemen for gentlemen. From the 1920s to the early 1950s Packard cars were among the most coveted in the world and was the luxury car market sales leader by a wide margin. Cadillac and Lincoln struggled to compete. In this new book author Patrick Foster details the history of a great marque, from its triumphant rise to its sad ending, detailing the tremendous cars it produced and the legend it created.

This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used

throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion table. The illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to

the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.
