This book strengthens the scientific knowledge base and promotes rational thinking among

students The Medical Council of India (MCI) has introduced a competency-based curriculum in 2019, which not only lays emphasis on integration with clinical and pre-clinical subjects but also clearly states subject competencies and defines domains and levels to be achieved for each of them. In addition, it is clinically oriented and gives due importance to the self-directed

learning. The duration of teaching for the subject of Pharmacology in the new curriculum has been reduced to one year with additional dedicated time to revisit it in the subsequent years. This 26th edition of Pharmacology and Pharmacotherapeutics has been revised considerably to match the demands of the new curriculum. Right from its conception, this book has used an integrated approach

intertwining current knowledge of pathophysiology of the disease, pharmacology of available drugs and strategies for medical management of diseases. We have made every attempt to provide up-to-date information about the drugs while focussing on the aspects relevant to their use in clinical practice. Structured pedagogy facilitating feature-rich presentation

and organization of the content, which makes it more student friendly. Richly illustrated content supplemented with large number of tables and boxes - explaining physiology, complex concepts, relevant drug features and principles of pharmacotherapy. Mechanisms of drug actions, explained in text and illustrated via diagrams as well as videos (animations)

for better understanding and retention. Key points in pharmacology and pharmacotherapy of diseases highlighted throughout the book. Practical tips in this book serve as a reference guide in practice so that students can treat their patients effectively and confidently.  More than ten years ago, the faculty members of the Department of Pharmacology at the University of Oklahoma College of Medicine developed a review book of medical pharmacology in response to requests from

our second year medical students who were preparing to sit for the Part I examination of the National Board of Medical Examiners. The students expressed a need for an organized approach to cope with the volume of basic science curricular material presented during the first two years. Therefore, our review book was not designed to provide a comprehensive text on

pharmacology, but rather to provide the students with a significant core of information, as a refresher, after they had successfully completed a basic course in pharmacology. This book represents a major revision of our review of medical pharmacology. The book has been reorganized, updated and expanded to provide current information on major new drugs and information on older drug

groups that typically are covered on licensure examinations. The book also has been expanded to include a large number of new questions for self-examination. The faculty have endeavored to retain a reasonably concise, relevant and readable review book that will provide the students with a thorough review of pharmacology . Students are advised to refer to comprehensive

e textbooks, as needed, to fill in any gaps in their knowledge which may be disclosed by the self-examinations. KD Tripathi's MCQs in Pharmacology Jaypee Brothers, Medical Publishers Pvt.
