Trade Secrets of Professional Resumé Writers The Princeton Review Millions of young people—and increasingly some not-so-young people—now work as interns. They famously shuttle coffee in a thousand magazine offices, legislative backrooms, and Hollywood studios, but they also deliver aid in Afghanistan, map the human genome, and pick up garbage. Intern Nation is the first exposé of the exploitative world of internships. In this witty, astonishing, and serious investigative work, Ross Perlin profiles fellow interns, talks to academics and professionals about what unleashed this phenomenon, and explains why the intern

boom is perverting workplace practices around the world. The hardcover publication of this book precipitated a torrent of media coverage in the US and UK, and Perlin has added an entirely new afterword describing the growing focus on this woefully underreported story. Insightful and humorous, Intern Nation will transform the way we think about the culture of work.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Internship Report from the year 2004 in the subject Computer Science - Commercial Information Technology, grade: passed, Technical University of Ilmenau, 0 entries in the bibliography, language: English, abstract: Last year I made the decision to do an internship abroad and not in Germany. My aim was to get insights into another work and living culture. To do an internship abroad lots of preparation was necessary. I was supported in getting my job by the international student exchange organisation AIESEC. I chose India for my internship, as it is an emerging nation concerning IT business and a popular

outsourcing destination. I applied for a job in the field of marketing. I had to do an Internet based interview in order to get the job at Net Solutions. AIESEC intermediated between the company and me before starting the traineeship and as well after I arrived in India. This document gives a comprehensive insight into my work in Net Solutions. First I introduce the company and country-specific particularities. Afterwards I explain my two major tasks, Marketing and Business Development as well as ISO 9000 certification before I conclude this report. "Internships: Theory and Practice" focuses on the history, theory, value, design, administration, and evaluation of professional internships as an educational experience for college students.

Internships are guided, pre-professional experiences that combine academic and professional components as a managed transition to professional careers. Touted by many as an educational innovation for the 21st century, internships (or experiential learning, or apprenticeships, as they once were called) have been a staple of professional preparation for centuries, dating back at least to the earliest documentation in the Middle Ages and no doubt far beyond that. Charles Sides and Ann Mrvica trace this history through primary sources to explore the development of internship experiences over the past 800 years, create an introduction to the topic of internships, and provide a foundation for modern college-corporation partnerships in professional education and training. The authors present specific guidelines and discussions on issues important to corporations, in terms of providing for internship experiences; issues important to colleges, in terms of designing and evaluating internships; and issues important to students, in terms of participating in and learning from internships.
