The Code of Federal Regulations is a codification of the general and permanent rules published in the Federal Register by the Executive departments and agencies of the United States Federal Government.

Handbook of Frozen Food Processing and Packaging, Second Edition Springer Science & Business Media

Animal research will play an essential role in efforts to meet increasing demands for global health care. Yet the animal research community faces the challenge of overcoming negative impressions that industry and academia engage in international collaborations in order to conduct work in parts of the world where animal welfare standards are less stringent. Thus, the importance of ensuring the international harmonization of the principles and standards of animal care and use cannot be overstated. A number of national and international groups are actively working toward this goal. The Institute for Laboratory Animal Research (ILAR), a program unit of the US National Research Council, is committed to promoting both the welfare of animals used in research and the quality of the resulting science. In 2008, to follow up on the 2003 event, ILAR convened a workshop which brought together 200 participants from 17 countries. Their mission was to identify and promote better understanding of important challenges in the conduct of animal research across country boundaries. These challenges include: the sourcing of animals; the quality of veterinary care; competent staff; the provision of a suitable environment (including nutritious food and potable water) for animals; and ongoing oversight of the animal program; among others. *Animal Research in a Global Environment* summarizes the proceedings of the 2008 workshop. The impact of this 2008 workshop has extended beyond the oral presentations conveyed in these proceedings. It has been a vital bridge for diverse colleagues and organizations around the world to advance initiatives designed to fill gaps in standards, professional qualifications, and coordination of animal use.

Emergency Response Guidebook National Academies Press

International shipping of vaccines is the first leg of the complex journey that vaccines undertake to reach the end users in a country. Particular challenges include the size and weight of packages, implementation of quality control checks at reception, ensuring environmental sustainability, and maintaining required temperatures during the journey. Although there are many possibilities of transport e.g. sea freight and terrestrial transportation, air freight currently remains the most widely used means of transport for vaccines. In recognition of this fact, these guidelines apply predominantly to the air freighting of vaccines. Transportation of vaccines from the manufacturing facility to the airport facility require the use of ground transportation, and reference is also made to the qualification of refrigerated road vehicles as well. The objective of these guidelines is to provide technical guidance to help ensure the quality of vaccines during all stages of the international air transportation process. These guidelines are applicable to all persons and institutions involved in

international air shipment of vaccines from the premises of the product manufacturer to the recipient country. This includes all parties involved in shipment, vaccine manufacturers, logistics service providers (LSPs), freight forwarders, carriers and their employees. The relevant sections of these guidelines should also be considered for implementation by UN procurement agencies and other international procurement organizations, countries, donor agencies and certifying bodies.

Safety in Cell and Tissue Culture IntraWEB, LLC and Claitor's Law Publishing

The Global Rinderpest Action Plan aims to ensure continued global freedom from rinderpest by outlining the actions necessary to prepare for, respond to and recover from a rinderpest outbreak. FAO and the World Organisation for Animal Health (OIE) declared in 2011 the global eradication of rinderpest and resolved to implement follow-up measures to keep the world free from the disease. Although rinderpest is the only animal disease that has been globally eradicated, the greatest risk for its re-emergence is the release, whether intentional or unintentional, of infectious material from a Rinderpest Holding Facility among susceptible animal populations. The re-emergence of disease would be a global animal health emergency, leading to the loss of global disease freedom and threatening livelihoods, food security, international trade and national economies.

Case Studies of Existing Human Tissue Repositories Transportation Research Board

A collection of both well-established and cutting-edge methods for investigating breast cancer biology not only in the laboratory, but also in clinical settings. These readily reproducible techniques solve a variety of problems, ranging from how to collect, store, and prepare human breast tumor samples for analysis, to analyzing cells in vivo and in vitro. Additional chapters address the technology of handling biopsies, new methods for analyzing genes and gene expression, markers of clinical outcome and progress, analysis of tumor-derived proteins and antigens, validating targets, and investigating the biology of newly discovered genes.

CRC Press

Case studies of twelve existing human biospecimen repositories performed to evaluate their utility for genomics- and proteomics-based cancer research and to identify "best practices" in collection, processing, annotation, storage, privacy, ethical concerns, informed consent, business plans, operations, intellectual property rights, public relations, marketing, and education that would be useful in designing a national biospecimen network.

Technical Assessment of Dry Ice Limits on Aircraft John Wiley & Sons

This essential handbook gives concise explanations of the myriad activities which encompasses shipping. The book covers documentation, types of ships and cargoes, organisations, freight charges and surcharges, contract forms and clauses, with all the relevant terms contained in logical sections, making it possible to see the terms in context. The second edition seeks to explain the history and progress of the European Commission's approach to competition in the liner and tramp trades. It also looks at security measures introduced since September 2001. By incorporating the book "Freight Charges", the book looks in particular at liner freight charges and surcharges in more depth.

This book is a collection of articles written by prominent scientists who gathered in the city of Recife, Brazil, 23-27 October 2010, celebrating the 10th International Symposium on Yersinia. The event is held every four years in a different country and for the Yersinia 2010, an interesting and updated program covering advances in research in Yersinia was organized. The major advances achieved over the past four years since the last symposium held in Lexington, USA in 2006 were divided into eight chapters: Epidemiology, Clinical, Diagnostic and Therapeutic aspects; Ecology and Modeling; Genomic/Transcriptomics and Large Scale Population; Immune Response and Vaccine; Pathogenesis and Pathogenicity Factors; Cellular Yersiniology; Bacterial Structure and Metabolism: Roles in Pathogenesis and Bacterial Life Style. The purpose of the book is to extend cutting edge knowledge on Yersinia discussed during the 10th International Symposium.

Preventive medicine in World War II. Simon and Schuster

This publication offers practical guidance to facilitate compliance with applicable international regulations for the transport of infectious substances by all modes of transport and includes the changes that apply from 1 January 2021. The document provides information for classifying, identifying, packaging, marking, labelling, documenting and refrigerating infectious substances for transportation and ensuring their safe delivery. The current revision replaces the document issued by the World Health Organization (WHO) in 2019 (document WHO/WHE/CPI/2019.20). When using this publication, reference must be made to the applicable international regulations.

Breast Cancer Research Protocols Springer Science & Business Media

This project is posthumously dedicated to Dr. Gregory Dana Bossart. Whether you knew him as colleague, mentor, friend, family member or simply 'knew of him', you could not help but be awestruck by his dedication, intelligence, thoughtfulness, work ethic and passion for scientific inquiry, especially for conservation of the marine environment. Many of his publications were seminal in marine mammal health, including infectious, environmental and zoonotic diseases. As we collected manuscripts for this special Frontiers edition, it was heartwarming to hear the comments from contributors. So many research scientists, field biologists and veterinarians could easily have given up and said, 'I just can't do this now', especially with the added challenges posed by the current COVID-19 pandemic. Instead, contributors from around the world were determined to contribute to this collection because of their inspiration and shared commitment with Greg's vision. The love and admiration within the marine community for Greg is phenomenal. With that said, we would be remiss if we did not say a few words about Greg as a mentor and friend. Greg had a knack for helping students realize their abilities and pursue their own independent contributions to the marine mammal community. He shared in their successes and worked tirelessly to facilitate their aspirations. Greg would involve students, early-career scientists and colleagues in projects, introduce them to collaborators and promote them and their work. Greg was a genuinely caring person. When he asked you 'how are you doing', he honestly wanted to know. He was always there,

ready to listen and provide guidance. If you were to ask Greg what was most important to him in life, he would say God, family and marine life (and one could argue that he had a special fondness for manatees). He believed in the beauty of nature and that God had a hand in all of it. He was in pursuit of ensuring that we all share this earth responsibly and sustainably. We miss Greg dearly, but honor and celebrate him as we carry on in our pursuits.

The Medical Department of the United States Army in World War II. Government Printing Office

Consumer demand for a year-round supply of seasonal produce and ready-made meals remains the driving force behind innovation in frozen food technology. Now in its second edition, Handbook of Frozen Food Processing and Packaging explores the art and science of frozen foods and assembles essential data and references relied upon by scientists in universities and research institutions. Highlights in the Second Edition include: Original chapters revised and updated with the latest developments New section on Emerging Technologies in Food Freezing, with chapters on ultrasound accelerated freezing, high-pressure shift freezing, electrostatic field-assisted food freezing, and antifreeze proteins New section on Trends in Frozen Food Packaging, with chapters on active packaging, intelligent packaging, vacuum packaging, and edible coatings and films and their applications on frozen foods This volume continues the tradition of the benchmark first edition, capturing the latest developments on the cutting edge of frozen food science. In addition to updated coverage of quality and safety issues and monitoring and measuring techniques, it highlights emerging technologies and trends, all in the format that made the previous edition so popular. It offers the tools needed to develop new and better products, keeping up with consumer demand for safe and convenient frozen foods.

Global Rinderpest Action Plan Guidelines for the international packaging and shipping of vaccines

" TRB's Hazardous Materials Cooperative Research Program (HMCRP) Report 11: Technical Assessment of Dry Ice Limits on Aircraft describes a technical approach to determining the maximum quantity of dry ice that may be safely carried aboard aircraft. The report includes guidelines for helping to determine safe limits for carriage of dry ice on commercial airplanes and a CD-ROM-based software tool designed to assist in determining appropriate dry ice loadings. The CD-ROM is packaged with the print version of the report. " -- publisher's description

Layouts and Operating Criteria for Automation of Dairy Plants Manufacturing Ice Cream and Ice Cream Novelties United Nations

The Food and Agriculture Organization of the United Nations (FAO) and the World Organisation for Animal Health (OIE) declared in 2011 the global eradication of rinderpest and resolved to implement follow-up measures to maintain world freedom from the disease. Rinderpest is the only animal disease that has been globally eradicated. The greatest risk for rinderpest (RP) re-emergence is the release, whether intentional or unintentional, of infectious material from a Rinderpest Holding Facility (RHF) among susceptible animal populations. The re-emergence of disease would be a global animal health emergency, leading to the loss of global disease freedom and threatening livelihoods, food security, international trade and national economies. The Global Rinderpest Action Plan (GRAP) aims to ensure continued global freedom from rinderpest by outlining the actions necessary to prepare for, respond to and recover from a RP outbreak.

Global Clinical Trials ECW Press

Filling an obvious gap in the scientific literature, this practice-oriented reference is the first to tie together the working knowledge of large screening centers in the pharmaceutical and biotechnological field. It spans the entire field of this emerging discipline, from compound acquisition to collection optimization for specific purposes, to technology and quality control. In so doing, it applies two decades of expertise gathered by several large pharmaceutical companies to current and future challenges in high-throughput screening. With its treatment of libraries of small molecules as well as biobanks containing biomolecules, microorganisms and tissue samples, this reference is universally applicable for any molecular scientist involved in a large screening program.

Biodiversity of Fungi is essential for anyone collecting and/or monitoring any fungi. Fascinating and beautiful, fungi are vital components of nearly all ecosystems and impact human health and our economy in a myriad of ways. Standardized methods for documenting diversity and distribution have been lacking. A wealth of information, especially regarding sampling protocols, compiled by an international team of fungal biologists, make Biodiversity of Fungi an incredible and fundamental resource for the study of organismal biodiversity. Chapters cover everything from what is a fungus, to maintaining and organizing a permanent study collection with associated databases; from protocols for sampling slime molds to insect associated fungi; from fungi growing on and in animals and plants to mushrooms and truffles. The chapters are arranged both ecologically and by sampling method rather than by taxonomic group for ease of use. The information presented here is intended for everyone interested in fungi, anyone who needs tools to study them in nature including naturalists, land managers, ecologists, mycologists, and even citizen scientists and sophisticated amateurs. Covers all groups of fungi - from molds to mushrooms, even slime molds Describes sampling protocols for many groups of fungi Arranged by sampling method and ecology to coincide with users needs Beautifully illustrated to document the range of fungi treated and techniques discussed Natural history data are provided for each group of fungi to enable users to modify suggested protocols to meet their needs

The bestselling “quackbuster” and “tireless tub-thumper against pseudoscience” fishes for the facts in a flood of misinformation (Maclean’s). Eat this and live to 100. Don’t, and die. Today, hyperboles dominate the media, which makes parsing science from fiction an arduous task when deciding what to eat, what chemicals to avoid, and what’s best for the environment. In *Is That a Fact?*, bestselling author Dr. Joe Schwarcz carefully navigates through the storm of misinformation to help us separate fact from folly and shrewdness from foolishness. Are GMOs really harmful? Or could they help developing countries? Which “miracle weight-loss foods” gained popularity through exuberant data dredging? Is BPA dangerous or just a victim of unforgiving media hype? Is organic better? Schwarcz questions the reliability and motives of “experts” in this “easy-to-understand yet critical look at what’s fact and what’s plain nonsense.” “Takes its readers through the carnival of pseudoscience, the morass of half-truths and, finally, the relatively safe road of reproducible scientific knowledge. This journey is made all the more enjoyable by Dr. Schwarcz’s surgical use of words and his mastery of public writing . . . [He] can always be counted on to write about the chemistry of the world in a way that is both entertaining and educational.” —Cracked Science “Written with a light touch and refreshing humor, this book provides a solid, authoritative starting point for anyone beginning to look at the world with a skeptical eye and a refresher for those further along that path.” —Library Journal

Agriculture Handbook Springer Science & Business Media

This book will explore the great opportunities and challenges which exist in conducting clinical trials in developing countries. By exploring the various regulations specific to the major players and providing insight into the logistical challenges including language barriers, this book provides a working tool for clinical researchers and administrators to navigate the intricacies of clinical trials in developing countries. Important topics such as ethical issues will be handled very carefully to highlight the significant differences of conducting this work in various jurisdictions. Overall, it will present a clear and comprehensive guide to the ins-and-outs of clinical trials in various countries to assist in design, development, and effectiveness of these trials. Contributors include high-profile, respected figures who have paved the way for clinical trials in developing countries Provides hands-on tools for regulatory and legal requirements and qualification, design, management, and reporting Case studies outline successes, failures, lessons learned and prospects for future collaboration Includes country-specific guidelines for the most utilized countries Foreword by David Feigel, former Head of CDRH at FDA
