A look at the origins of cognitive abilities in primate species. Since Darwin's time, comparative psychologists have searched for a good way to compare cognition in humans and nonhuman primates. In *Origins of Intelligence*, Sue Parker and Michael McKinney offer such a framework and make a strong case for using human development theory (both Piagetian and neo-Piagetian) to study the evolution of intelligence across primate species. Their approach is comprehensive, covering a broad range of social, symbolic, physical, and logical domains, which fall

under the all-encompassing and much-debated term intelligence. A widely held theory among developmental psychologists and social and biological anthropologists is that cognitive evolution in humans has occurred through juvenilization—the gradual accentuation and lengthening of childhood in the evolutionary process. In this work, however, Parker and McKinney argue instead that new stages were added at the end of cognitive development in our hominid ancestors, coining the term *adultification by terminal extension* to explain this process. Drawing evidence from scores of studies on monkeys, great apes, and human children, this book provides unique insights into ontogenetic constraints that have interacted with selective

forces to shape the evolution of cognitive development in our lineage. "The authors' elegant theory and comprehensive empirical synthesis of how the development of human intelligence and brain evolved opens up cascading heuristic avenues for creatively answering one of the great questions in the human history of ideas." —Jonas Langer, *Human Development* "A handy source of information on comparative cognitive abilities related to life history and brain variables." —James Anderson, *Journal of the Royal Anthropological Institute*

Individuals who suffer from chronic mental disorders, including schizophrenia and bipolar

disorder, often experience cognitive deficits. For example, they may have difficulty with attention, memory, processing speed, abstract reasoning, and problem solving, among others. Cognitive remediation is an evidence-based behavioral treatment for people who are experiencing cognitive impairments that interfere with daily functioning. This volume contains all the information you need to set up a cognitive remediation program or "Learning Center" where clients can strengthen their cognitive skills. The program described is a group-based treatment that provides highly individualized learning, by allowing group members to work at their own pace on cognitive tasks carefully chosen to be both engaging and remedial. The goals of the Neuropsychological and Educational Approach to Cognitive Remediation (NEAR) are to provide a positive learning experience to each and every client, to promote independent learning, and to promote optimal cognitive functioning in daily life. Clients come to the Learning Center for 60 - 90 minute sessions at least twice a week.

Sessions are structured to enhance motivation and learning through a set of instructional techniques that are carefully implemented as outlined in this manual. Guidelines for effectively administering therapy and running a successful program as a cognitive remediation specialist are set forth in the chapters of this book. You will learn how to choose appropriate software, recruit clients, perform intakes and assessments, and create treatment plans. Strategies for dealing with difficult clinical situations are also provided. This guide comes complete with all the tools necessary for facilitating treatment, including program evaluation forms and client handouts. Remediation (NEAR) Model is an evidence-based approach to cognitive remediation that utilizes a set of carefully crafted instructional techniques that reflect an understanding of how people learn best. This therapist guide provides a step-by-step instruction on how to implement NEAR techniques with patients to improve their cognitive functioning and quality of life. Process Model,

This book describes how companies can easily and pragmatically set up and realize the path to a data-driven enterprise, especially in the marketing practice, without external support and additional investments. Using a predictive intelligence (PI) ecosystem, the book first introduces and explains the most important concepts and terminology. The PI maturity model then describes the phases in which you can build a PI ecosystem in your company. The book also demonstrates a PI self-test which helps managers identify the initial steps. In addition, a blueprint for a PI tech stack is defined for the first time, showing how IT can best support the topic. Finally, the PI competency model summarizes all elements into an action model for the company. The entire book is underpinned with practical examples, and case studies show how predictive intelligence, in the spirit of data-driven management, can be used profitably in the

short, medium, and long terms.

Dental professionals spend their working lives in stressful environments and in awkward postures, with resultant musculoskeletal problems. While there are numerous books on musculoskeletal pain, there is nothing specific for dental professionals on the holistic approach to the self-management of musculoskeletal conditions. This book is a practical guide; it combines all the different modalities in a logical and systematic programme, firstly by recognising the possible causes of your predicament, and secondly by effectively managing it to prevent recurrence.

The International Conference on Intelligent Computing (ICIC) was formed to provide an annual forum dedicated to the emerging and challenging topics in artificial intelligence, machine learning, bioinformatics, and computational biology, etc. It aims to bring together researchers and practitioners from both academia and industry to share ideas, problems, and solutions related to the multifaceted aspects of intelligent computing. ICIC 2009, held in Ulsan, Korea, September 16-19,

2009, constituted the 5th - ternational Conference on Intelligent Computing. It built upon the success of ICIC 2008, ICIC 2007, ICIC 2006, and ICIC 2005 held in Shanghai, Qingdao, Kunming, and Hefei, China, 2008, 2007, 2006, and 2005, respectively. This year, the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing. Its aim was to unify the p- ture of contemporary intelligent computing techniques as an integral concept that hi- lights the trends in advanced computational intelligence and bridges theoretical research with applications. Therefore, the theme for this conference was "Emerging Intelligent Computing Technology and Applications." Papers focusing on this theme were solicited, addressing theories, methodologies, and applications in science and technology. For thousands of years humanity has longed for a truth, revelation, or knowledge that explains

the unity of God behind all mystical experiences, previous revelations, and religions of the world, and the truth behind the universe (science). There have been mystical explanations of God from those claiming they have experienced the truth by direct contact with Spirit. There are also those who have founded great religions of the world. However, a great confusion still reigns among spiritualists, religions of the world, and the many different branches within each religion. If you study this Book carefully, with a sincere mind and an Open Heart, it will be revealed to you that the major religions on earth are not contradictory and separated at all. In fact they are complementary and were sent to earth systematically by One God. When this is understood, the Path to Salvation (Eternal Divine Path) is known! For those who have the intention but lack the lifetime it would take to

study the entire history of spirituality, this extraordinary compendium is a great gift. Stone has gleaned the essentials from vast research as well as intuitive information and woven them into a simple and engrossing exploration of self-realization. The Complete Ascension Manual is both practical and enlightening. It is a guidebook through the past and a how-to manual for ascension. Created to be read as an overview of the spiritual path, this book explores the world's great religions, Great Masters, spiritual psychology and the Ascended Masters' teachings with specific steps to accelerate our process of ascension. The Complete Ascension Manual is a thorough introduction to subjects such as: The monad, soul and personality, God and the cosmic Hierarchy, Ascension, the sixth initiation, Twenty ascension techniques to build your Light quotient, Mantras, names of God and words of power, and 147 Golden "Keys" to achieving ascension in this lifetime.

Credit Intelligence and Modelling provides an indispensable explanation of the statistical models and methods used when assessing credit risk and automating decisions. Over eight modules, the book covers consumer and business lending in both the developed and developing worlds, providing the frameworks for both theory and practice. It first explores an introduction to credit risk assessment and predictive modelling, micro-histories of credit and credit scoring, as well as the processes used throughout the credit risk management cycle.

Mathematical and statistical tools used to develop and assess predictive models are then considered, in addition to project management and data assembly, data

preparation from sampling to reject inference, and finally model training through to implementation. Although the focus is credit risk, especially in the retail consumer and small-business segments, many concepts are common across disciplines, whether for academic research or practical use. The book assumes little prior knowledge, thus making it an indispensable desktop reference for students and practitioners alike. Credit Intelligence and Modelling expands on the success of The Credit Scoring Toolkit to cover credit rating and intelligence agencies, and the data and tools used as part of the process.
