Medical students often feel they understand the theory behind the clinical aspect of medicine but seldom have enough chance to put what they learn into practice. In addition, clinical examinations pose a challenge to students who may be technically and theoretically excellent, but who have poor examination technique. It is quite common for students to lack understanding of how they will be marked, how much emphasis to place upon certain actions or how much detail is expected of them. 'OSCE CASES WITH MARK SCHEMES' is intended to fill this gap. It provides OSCE mark schemes to reflect the real OSCE experience, by encouraging self assessment when practicing the clinical scenarios. The book includes chapters on communication skills, medical ethics, explanation stations, paediatrics and obstetrics and gynaecology subjects which are sometimes neglected elsewhere. All four authors have taken part in medical student teaching and OSCE examinations. They understand what will earn marks in the actual exam. All the OSCE scenarios are from stations previously examined in the UK's top medical schools. This book prepares the student for what the actual finals exam will be like. CONTENTS: SECTION ONE, COMMUNICATION STATIONS - Presenting Complaints - Psychiatry History Taking - Pediatrics History Taking - Obstetrics History Taking - Gynaecology History Taking - Medical Ethics - Difficult Communication Scenarios - Pharmacology - Consenting - Explanation of Management and Results SECTION TWO, PERFORMANCE STATIONS - Examination Skills - Practical Skills - Data Interpretation - Closing Remarks

This new addition to the popular 100 cases series explores common clinical scenarios that will be encountered by the medical student and junior doctor during practical training in the emergency department, in the community and in intensive and critical care settings, and which are likely to feature in qualifying examinations. The book covers a broad range of presentations, organized by sub-specialty area for ease of reference. Comprehensive answers highlight key take home points from each case and provide practical advice on how to deal with the challenges that occur when practising emergency and critical care medicine at all levels.

The Unofficial Guide to Prescribing lays out the practical steps of how to assess, investigate and manage a patient, with a focus on what to prescribe and how to prescribe it. Its aim is to empower newly graduated junior doctors to excel at dealing with emergencies and handling complex prescribing scenarios. Prescribing errors cost healthcare systems millions annually, so early training in prescribing has become an urgent priority of medical education and now forms an essential part of teaching and assessment. The Unofficial Guide to Prescribing (from the same stable as The Unofficial Guide to Passing OSCEs) is a new book designed to address this requirement. It is written by junior doctors still close to the transition from theory to practice, overseen by a review panel of senior clinicians to ensure accuracy, and designed to help medical students practise and learn as much as possible about prescribing, in actual clinical scenarios, before they have to do it for real. Each scenario is presented as you would see it in the hospital setting and covers: Initial step-by-step assessment of the patient: how to assess, assessment findings, and immediate management Initial investigations Initial management Reassessment Treatment Handing over the patient 'Prescribe' alerts throughout Written-up drug charts Blank drug charts for copying and practice Illustrated Textbook of Paediatrics McGraw Hill Professional This book provides an in-depth 'state-of-the-art' critical review of the technique and the applications of flexible and rigid

bronchoscopy to infants and children. Written by an international panel of experts, it reviews the technical aspects of the procedure, its common and highly specialized applications as well as its potential alternatives. The chapters are enhanced by a wealth of original figures. A major innovation of the book is the inclusion of online videos from actual bronchoscopies that further illustrate and elaborate on the information provided in the text. The book is addressed to paediatric pulmonologists and otorhinolaryngologists, both experienced and in training, as well as to other personnel who are involved in the performance of the procedures. In addition, it is recommended to pulmonologists for adults and general paediatricians who need to be able to evaluate the usefulness of bronchoscopy for their patients and be aware of its limitations and potential contra-indications.

The Ultimate Guide To Choosing a Medical Specialty CRC Press Embodying the principle of 'everything you need but still easy to read', this fully updated edition of Core Radiology is an indispensable aid for learning the fundamentals of radiology and preparing for the American Board of Radiology Core exam. Containing over 2,100 clinical radiological images with full explanatory captions and color-coded annotations, streamlined formatting ensures readers can follow discussion points effortlessly. Bullet pointed text concentrates on essential concepts, with text boxes, tables and over 400 color illustrations supporting readers' understanding of complex anatomic topics. Real-world examples are presented for the readers, encompassing the vast majority of entities likely encountered in board exams and clinical practice. Divided into two volumes, this edition is more manageable whilst remaining comprehensive in its coverage of topics, including expanded pediatric cardiac surgery descriptions, updated brain tumor classifications, and non-invasive vascular imaging. Highly accessible and informative, this is the go-to introductory textbook for radiology residents worldwide.

Ear, Nose and Throat (ENT) surgery has traditionally been a difficult and specialised topic in undergraduate medicine and for junior doctors. Many textbooks are too detailed for undergraduate use, or lack self assessment questions to help those wishing to

underpin their learning. This concise and easy-to-read self-assessment guide aims to clarify the topic, and find and fill gaps in understanding. The multiple choice questions (MCQs) contained cover all levels of knowledge and the learning objectives of most of the UK medical school curricula, aiding preparation for end of unit, module and final exams for ENT. This book will be a valuable companion for clinics and teaching sessions and an indispensable revision primer for graduate entry medical curricula. 'An excellent means of preparation for medical undergraduate examinations as gaps in core knowledge are quickly revealed. Further, this text is a good guide for students to identify those subject areas requiring more focused study, especially when time is short.' - From the Foreword by Samir Soma

Maternal and child morbidity and mortality affect women and children all over the world. In low resource settings, it is often the result of an illness which under other circumstances would be preventable and treatable. The disease burden predominately occurs in developing countries, but the dangers facing women and children are global issues. To improve conditions for women and children everywhere, we must address maternal and child health in their own right, and ask how they affect each other. The Oxford Textbook of Global Health of Women, Newborns, Children, and Adolescents is a comprehensive study of the cycle of life. The development of children is traced from pre-natal through to newborns, childhood, and adolescence. Posing child health against maltreatment, injury, and malnutrition, this book asks uncomfortable but necessary questions, and discusses how to influence policy and inspire change. Following women from adolescence to motherhood, it discusses sexual and reproductive health, HIV, injury, pregnancy, mental health, and much more. With examples from high- and low-resource settings presented by experts in the field, the Oxford Textbook of Global Health of Women, Newborns, Children, and Adolescents is a unique resource for medical practitioners everywhere. Divided into eight sections, it takes a life course approach to female health. With a clear structure, helpful illustrations, and study questions at the end of each chapter, it is an easy to use manual for healthcare workers treating patients in the clinic and out in the field. Through

its descriptions of the main challenges and explanations of the key theories in the field, this is the ideal textbook for medical students in paediatrics, obstetrics, nursing, midwifery, and other related areas. Looking to the future, it is also an invaluable starting point for policymakers and anyone with a general interest in the subject area.

Drawing on philosophy, the history of psychology and the natural sciences, this book proposes a new theoretical foundation for the psychology of the life course. It features the study of unique individual life courses in their social and cultural environment, combining the perspectives of developmental and sociocultural psychology, psychotherapy, learning sciences and gerontology. In particular, the book highlights semiotic processes, specific to human development, that allow us to draw upon past experiences, to choose among alternatives and to plan our futures. Imagination is an important outcome of semiotic processes and enables us to deal with daily constraints and transitions, and promotes the transformation of social representation and symbolic systems - giving each person a unique style, or 'melody', of living. The book concludes by questioning the methodology and epistemology of current life course studies.

This book is "innovative and original in assisting the reader to apply the principles of science to paediatric practice". Professor Neena Modi, President, Royal College of Paediatrics and Child

Health. The Science of Paediatrics, MRCPCH Mastercourse, provides essential background preparation for the MRCPCH Theory and Science examination. It contains an up-to-date review of the application of science to everyday paediatric clinical practice, whether it is interpreting clinical signs or investigations, prescribing drugs or identifying best management. Although this understanding is essential in order to make informed clinical decisions, it is difficult to obtain as it is not usually covered in clinical textbooks. Key features • MRCPCH exam-format questions embedded in each chapter to test understanding • Emphasis on embryology to explain many congenital abnormalities • An overview of the relevant anatomy and physiology • Focus on the application and interpretation of investigations • Examples of recent advances in science and clinical research that have benefited the children's care • All clinical specialties covered by paediatric specialists. • Chapters covering evidence-based paediatrics, statistics, ethics and quality improvement.

Child, family and parenting support is increasingly recognized as an important part of national social policies and social investment packages aimed at reducing poverty, decreasing inequality and promoting positive parental and child well-being. Over the past 15 to 20 years, different models of family-related services have

evolved in different parts of the world. Much less documented is what drives the development of national policies and programmes in low- and middle-income countries and how the provision of family and parenting support impacts on child and adolescent well-being in these contexts. The publication aims to build the

evidence base on what kind of family and parenting support works, under what conditions and for whom in order to promote child well-being in different national contexts. Case studies are included from: Belarus, Chile, China, Croatia, England, Jamaica, The Philippines, South Africa, and Sweden.
