 "Chemical engineers" use math, physical sciences (physics, chemistry), life sciences (biology, microbiology and biochemistry), and economics to solve practical problems. The difference between chemical engineers and other types of engineers is that they apply a knowledge of chemistry in addition to other engineering

disciplines.
 Introduction to Chemical Engineering
 Introduction to the quantitative treatment of differential equations that arise in the area of chemical engineering. The book emphasizes the methods implemented in commercial software to help the engineer gain maximum benefit.

 DESCRIPTION The goal of this book is to help the student experience chemical engineering to the fullest extent possible within the constraints of limited time and limited student background. In pursuit of that goal, it teaches the freshman to solve quantitative problems, although at a low level of complexity and within a scope that is narrow and well-defined.

 If a process has to be done in

batches, several reactors are often used in parallel, shifted in time to give a continuous stream from the group of reactors. See Figure 3 for a schematic representation of a CSTR. 2.3 Plug ow reactor(PFR) Another type of continuous reactors is the plug ow reactor, or PFR.
