Autodesk Fusion 360: Introduction to Parametric Modeling Parametric modeling is accomplished by identifying and creating the key features of the design

with the aid of computer software. The design variables, described in the sketches as parametric relations, can then be used to quickly modify/update the design. In Autodesk Fusion 360, the parametric part modeling process involves the following steps: Parametric Modeling with Autodesk Fusion 360 This could include recovering the parametric history from a STEP or IGES file, or even using a 3D scan of a part to build a parametric model. As a first step, we tackled a very narrow version of this problem by attempting to recover the parametric history for simple 'sketch and extrude' designs. How Machine Learning Might Help Recover or
