Peachpit Press
Presenting the thoroughly revised, fully illustrated edition of The Nikon Compendium, updated by the technical editor of Nikon Owner magazine to include all the new Nikon cameras, lenses, and accessories. This is what Nikon enthusiasts have eagerly awaited: the most complete Nikon reference book ever. At almost double the length of the

original, the guide describes virtually every Nikon camera ever produced, right up to the wide variety of popular digital models. It aids identification, offers user-friendly tips, explains what system fits with which camera, and discusses what limitations occur when equipment from one generation is married to items from another. Professional and amateur photographers, as well as enthusiasts, collectors, and retailers will want this on their bookshelves.

Applied Photographic Optics Yale University Press

Selected by the American Library Association's 'Choice' magazine as "best technical book", the first edition of this book soon established

itself as the standard reference work on all aspects of photographic lenses and associated optical systems. This is unsurprising, as Sidney Ray provides a complete, comprehensive reference source for anyone wanting information on photographic lenses, from the student to the practitioner or specialist working with visual and digital media worldwide. This third edition has been fully revised and expanded to include the rapid progress in the last decade in optical technology and advances in relevant electronic and digital forms of imaging. Every chapter has been revised and expanded using new figures and

photographs as appropriate, as well as extended bibliographies. New chapters include details of filters, measurements from images and the optical systems of digital cameras. Details of electronic and digital imaging have been integrated throughout. More information is given on topics such as aspherics, diffractive optics, ED glasses, image stabilization, optical technology, video projection and new types of lenses. A selection of the contents includes chapters on: optical theory, aberrations, auto focus, lens testing, depth of field, development of photographic lenses, general properties of lenses, wide-angle lenses, telephoto

lenses, video lenses, viewfinder systems, camera movements, projection systems and 3-D systems.

When looking at a photograph, too often a conversation starts—and, unfortunately, ends—with a statement such as, “I like it.” The logical next question, “Why?”, often goes unasked and unanswered. As photographers, we frequently have difficulty speaking about images because, frankly, we don’t know how to think about them. And if we don’t know how to think about a photograph and its “visual language”—how an image is constructed, how it works, and why

it works—then, when we're behind the camera, are we really making images that best communicate our vision, our original intent? Vision—crucial as it is—is not the ultimate goal of photography; expression is the goal. And to best express ourselves, it is necessary to learn and use the grammar and vocabulary of the visual language. Photographically Speaking is about learning photography's visual language to better speak to why and how a photograph succeeds, and in turn to consciously use that visual language in the creation of our own photographs, making us stronger photographers who are able to fully express and communicate our

vision. By breaking up the visual language into two main components—"elements" make up its vocabulary, and "decisions" are its grammar—David duChemin transforms what has traditionally been esoteric and difficult subject matter into an accessible and practical discussion that photographers can immediately use to improve their craft. Elements are the "words" of the image, what we place within the frame—lines, curves, light, color, contrast. Decisions are the choices we make in assembling those elements to best express and communicate our vision—the use of framing, perspective, point of view, balance, focus, exposure. All

content within the frame has meaning, and duChemin establishes that photographers must consciously and deliberately choose the elements that go within their frame and make the decisions about how that frame is constructed and presented. In the second half of the book, duChemin applies this methodology to his own craft, as he explores the visual language in 20 of his own images, discussing how the intentional choices of elements and decisions that went into their creation contribute to their success.

The twelfth-century

French poet Chrétien de Troyes is a major figure in European literature. His courtly romances fathered the Arthurian tradition and influenced countless other poets in England as well as on the continent. Yet because of the difficulty of capturing his swift-moving style in translation, English-speaking audiences are largely unfamiliar with the pleasures of reading his poems. Now, for the first time, an experienced translator of medieval verse who is himself a poet provides a translation of Chrétien's major poem, *Yvain*, in verse that fully and satisfyingly captures the movement, the sense, and the spirit of the Old French original. *Yvain* is a courtly

romance with a moral tenor; it is ironic and sometimes bawdy; the poetry is crisp and vivid. In addition, the psychological and the socio-historical perceptions of the poem are of profound literary and historical importance, for it evokes the emotions and the values of a flourishing, vibrant medieval past.

another globe-trotting collection of stories. But it is more than simply an anthology of short fiction, as it contains representative literature from all over the world, conveying the reader on thought-provoking journeys across continents, cultures and landscapes. One World Two is even more ambitious than Volume One in its geographic scope, featuring twenty-one writers drawn from every continent. Most of the stories are unique to this volume, while others are appearing for the first time in English (Egypt's Mansoura Ez-Eldin and Brazil's Vanessa Barbara). The themes and writing styles are as richly diverse as their writers' origins.

The collection is built around a loose theme of building bridges. It is interested in the human condition as a dynamic central line linking individuals, cultures and experiences: east and west, north and south, and, perhaps most importantly, past, present and future. This book features established stars such as Edwidge Danticat (*Breath, Eyes, Memory*), Viet Thanh Nguyen (*The Sympathizer*) and Aminatta Forna (*The Hired Man*) and authors who are steadily building a reputation such as Fan Wu, Ana Menéndez and Daniel Alarcon. In order of appearance, the authors are: Yewande Omotoso, Viet Thanh Nguyen, Heidi North-Bailey, Ana Menéndez,

Mathew Howard, Okwiri Oduor, Desiree Bailey, Vamba Sherif, Alice Melike Ulgezer, Daniel Alarcon, Mansoura Ez-Eldin, Aminatta Forna, Nahid Rachlin, Samuel Munene, Vanessa Barbara, Ret'sepile Makamane, Fan Wu, Olufemi Terry, Balli Kaur Jaswal, Chris Brazier, and Edwidge Danticat. This edited collection applies kinship as an analytical concept to better understand the affective economies, discursive practices, and aesthetic dimensions through which cultural narratives of belonging establish a sense of

intimacy and affiliation. In North American and European ethnic literatures, kinship has several social functions: negotiating diasporic belonging in and outside of the perimeters of bloodlines and genealogy; positioning queer-feminist interventions to counter ethno-nationalist narratives of belonging; challenging liberal sentimentalist narratives, such as those grafted onto the bodies of transnational adoptees; re-formulating cultural heterogeneity through interracial and interethnic kinship constellations outside either post-racial assumptions about colorblindness or celebrations of racial and ethnic pluralism. In

all of these cases, kinship features as a common theme through which contemporary authors attend to challenges of conscribing individuals into inclusive, counter-hegemonic cultural narratives of belonging.

Louis Trimble has been involved for nearly 20 years in the development of English for science and technology (EST), and in this book he describes the approach which he and others have developed. It starts from the premise that in order to understand the written EST found in technical manuals, textbooks, papers etc., it is first necessary to have an understanding of the

discourse structure of these texts. Here he gives a very full description, with many examples, of the various significant features of EST discourse, such as types of classification, definition, instruction etc. The book also describes the 'individualising process' whereby students bring their own specialised material into the course; and the last chapter, demonstrates how a particular course can be organised and structured.
